4757. HAM 4 HELP PLEASE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: Richard Williams <richard.a.williams@attcanada.net>
Message-ID: <_QW24.6013$fy1.631@tundra.ops.attcanada.net>
Source record: 92529

A couple of weeks ago my Ham 4 started acting up. It would rotate fine between NE and NW. Outside these ranges
the meter would start jumping all over the place, although the rotator continued to rotate normally. Yesterday I took
the rotator off of the tower. I checked it with a two foot piece of cable to rule out a cable short someplace. My next
theory was that something was wrong with the big potentiometer inside the bell housing at the top. When I took a look
the copper strip was off the little track thing and as I rotated it by hand it was clear it wasn't actually making contact
in places. It looks to me that the copper thing has simply worn out and broken off. Does this sound reasonable?
Any idea where I can buy one of these copper strip doohickeys? Thanks. Rick VE9HF.

I went through the same buying decision a while back and ended up with the
ICOM IC-2800H even though it doesn't do v/v or u/u. It was the newest one
out at the time.
The other radio I was looking at was the Yaesu FT-90R but it had weak audio
output,
and it reminded me of my VX-1R.
My advice to you is to play with all of them and get the one that feels
the most comfortable.
Got it at HRO.

I use a uniden 2510 to drive my 432 transverter, moved the
transverter osc freq so 26mhz + 432mhz and in the second
position 440mhz. It gives me more of the band (also works
well on 2 meter transverters, gives you the whole band).

Russo,

Please don't take this as an attack on you, but smoking does make a difference in a lot of ways. The tar and nicotine case damage (physical and smell) to most any equipment. If it were a car then it would be in the upholstery and carpets as well as the electronics. Most people who smoke think because it hasn't killed them yet it hasn't harmed them. They probably never stopped to think about why they hack and cough all the time, not all do, for a while. If I might give a personal example or two....

My father smoked Camels (highest in tar AND nicotine of all the brands) who's motto was "I'd walk a mile for a Camel". Before he died he wished he could walk two steps to use the bath room! Read the book, NONE OF THESE DISEASES by S.I. McMillian (?) to find out

HOW the tar and nicotine cause the build up of cholesterol. It's in the chapter on "Cancer by the carton". By the way, my father had 5 amputations before he died with one leg cut off half way between the hip and knee and the other just above or below the knee. Died a bit over 60 years old.

My step-father worked at a rock quarry so most of his health problems got blamed on the rock dust, but he used to brag about smoking since he was 12 or so and "it hadn't hurt him". He died using oxygen and one day got the oxygen line pinched in a door while he was in the bath room. He was purple before he was found. Age < 60.

I personally believe that cigarettes, and their stupidity in using them, killed both these men. I know of many others who have all kinds of breathing problems and keep on smoking. One man was in the hospital waiting room the other day and went outside saying, "I'm going to take a few drags if it kills me." (Or something to that effect. It was awfully tempting to say to him, not to worry, it would sooner or later!) The doctor had already told him to give it up.

Personally, I don't even like to go into a room where someone else has been smoking. It really bothers some folks. I'm one of them.

Again, Please don't take this as an attack on you. If you wish to kill yourself it is your right. I just think you could find an easier, less expensive and much faster way to do it -- as well as a much less painful way to go!

As to your last comment....yes, you are right. Smoke is not the only thing that harms rigs. I purchased a vehicle once that had been gone over electrically by the teenage son. I wished a few times that they had it back, but they never knew I noticed.

God bless...

Al

4763. Heath SB-1000 mod to 28mhz ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: John Warren <John.Warren@colorado.edu>
Message-ID: <82hi1j$o9f@peabody.colorado.edu>

Anybody have or know where to get info telling what is required to make the
Heathkit SB-1000 work on ten meters.
Ameritron (I think their AL-80 is very close) or old heathkit info maybe?
The band switch goes into the "ghost postion'. It seems like there is a 6th
input
coil that is extra and probably for ten.

Thanks

John

Hey thanks to all who helped with the keypad deal. FYI is below for all to benefit.

Called relm, they gave me to their parts supplier, 10-4 Communications. number is 800.487.9576 and keypad part number is 2001-6066-706 (they knew it by heart)
Cost is $16 plus shipping. they're on order so it may be a week.
I got my order in!
good luck and thanks to all,
Randy

I've had the FT100 since April...Works like a champ. There were a flurry of rigs that suffered infant mortality problems that you will no doubt hear about. Mine has worked flawlessly from day 1.

I would make two recommendations:

1. You will need an external spkr...especially mobile. Little spkr inside just not enough.
2. You may have to make some sort of strain relief for the antenna pigtails on the back...they always make me nervous.

Other than that, its alot of fun to operate.

I noticed mine had the same problem but since I don't normally
operate FM it didn't bother me too much. I did notice by moving
the mic cord or coax around, the symptoms changed (reduced).
I suspected rf getting back into the rig. A couple of ferrite
cores might possibly fix it but I haven't tried that yet.

Source record: 92544

I have an ICOM-255A mobile transciever, that I was given. It works great on all 2M frequencies, and I can not complain. However, it does have the ability to store 5 freq. in memory, as long as the power is kept on the radio. In other words, if it's plugged into your car socket, the car supplies the memory voltage for the radio, when it is off. Well, it 'does not' work. It looses all memory when turned off, even with power still on it. I have the schematics to trace it down, but wondered if anyone had an idea on what to look for???

You might just check a good shortwave store like Gilfer...

http://www.acclaimnet.com/gilfer/index.htm

They sell new and used receivers, and can likely home in on what would
be good for listening to the space shuttle.

: > Perhaps this could be a way towards a progressive class structure for
: > licencing - much better than a once tested morse capability IMO - how it
: > would be tested and administered would be interesting though.

: Yes perhaps it could starting at CB where it currently is at then a series
: of progressive examinations each giving additional privilages.

The biggest problem is *who* would administer it? Probably a FOC from the local club who doesn't understand those new-fangled transistors and would equate technical ability to morse speed (and accuracy?).

: > Being an amateur with some technical ability, it alarms me to see the way
: > that some folk "dive in" with little knowledge. Yes, I have had somebody
: > bring a (domestic) radio in saying "I tightened all the loose screws" :-)

: And all this blue smoke came out of the top and it has had a strange smell
: about it ever since.

No, the blue smoke and strange smell arrived after I gave him the bill!

: > BTW Gary, two things, I think that you have a lot more faith with the
: > designers than I do and what do you use your little brass & ferrite ended
: > gizmo for - other than to find out which way to turn the core? I found it
: a
: > lot easier to look at the display from a wobbulator to tell me which way
: to
: > go.

: May I direct your attention to the fact that the physical size and the cost
: of purchase are at the opposite ends of the spectrum for the tuning wand and
: the wobbulator. How many hams have a wobulator? How many hams could carry
: one in their top pocket? How many hams have a scope? Of course a wobbulator
: alone is insufficient for good results; a good calibration oscilator is also
: required.

I suppose that I have had the luxury of calibrated test equipment since leaving school. I believe that I may have a Cossor wobbulator from my TV repair days still up in the loft. It had a tuneable and a swept (tuneable) oscillator as well as a twin crystal (1/10MHz) marker generator.

Since leaving school in the early '60's, I have worked in the TV (domestic), motor (electronic instrumentation) and communications (PMR) industries before joining the test equipment business, firstly with a well known Munich based German Company, then a large company in Chelmsford before setting up my own Company.

: However for an If amp where a whole series of tuned transformers are used
: the wobulator will not tell you which transformer to tune the tuning wand in
: conjunction with the wobbulator will make the job very much easier.

Yes, quite true. However, given the choice, I would still prefer my wobbulator. Probably a Rohde & Schwarz Polyskop IV without which I would think it "fun" to align a reference TV transmitter (R&S SBTF).

: If anyone is paying for the wrecked gear then they are of course entitled to
: use absolutely any method that they choose.

Yes, but it is a bit like watching one who puts a soda into a single malt!

: Gary7SLL, always one hand in pocket.

Good sense, and before one of the lesser minded think of an inappropriate comment, it is especially good sense with a rubber mat when working with higher voltage equipment.

Geoff

4778. Kenwood TS50 - Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: Rickie Sexton <r.sexton@worldnet.att.net>
Message-ID: <82mta3$l5r$1@bgtnsc01.worldnet.att.net>
Source record: 92550

I have a Kenwood TS50 that does not go to the Amateur Bands when you switch from the General Coverage to Amateur modes. In general coverage mode, the radio transmits and you can tune the amateur bands OK. I haven't tried yet; but, is it possible that the battery back-up is dead? Any suggestions?

Thanks,
Rick - KF9MT

4779. vx5 receiver comments

Newsgroup: rec.radio.amateur.equipment

From: Sean Nixon <sean.nixon@attglobal.net>
Message-ID: <384f1a4c_3@news1.prserv.net>
Source record: 92551

Can anyone comment on how the vx5 receiver compares to the ft50?
Especially with regard to interference from other strong stations not on the
frequency you are listening.

Also how does it perform around 75MHz-

Thanks
Sean zl2bof

From: BamBam <kl0an@my-deja.com>
Message-ID: <82fs3e$ur4$1@nnrp1.deja.com>
Source record: 92630

Does anyone remember seeing a mod for adding AM to the HTX-100 from Radio Shack?? I've modified my rig to go from 26.000 - 29.999 but down in the CB bands, it's all SSB... Wondering if there's a switch that can be installed and a mod done so that I can switch back and forth between SSB and AM.. Right now a friend of mine comes in nice and clear on USB when he's on AM but he has to switch to USB to read what I'm saying to him...

Any help would be greatly appreciated.. well, besides buying an all-mode rig.. hehe

QSK add-on board for the Ameritron AL-1200, AL-1500 and AL-80A amplifiers.

Bought recently for use in my AL-80B but it won't fit. The person I bought it from said it has never been installed in any amp and it certainly looks like new to me.

Includes installation manual and all parts needed for installation.

$150 including USPS Priority Mail shipping to USA.

4785. Timewave 599zx and Icom 735

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-06 00:00:00 UTC
From: Leland Van Koten <vankoten@home.com>
Message-ID: <384B272D.DFE96E2E@home.com>
Source record: 92633

Does anybody use the Timewave 599zx with an Icom 735 or similar Icom rig? The instructions on the Timewave unit mention a connection to the PTT Out jack on the back panel of the rig, but there isn't one on the 735.

I sent an email to Timewave's technical service folks, who responded very promptly, but completely unhelpfully, by saying that none of them used Icom transceivers, and they were unsure how to do the required connection. They suggested contacting Icom technical support, but Icom apparently has no email address, and no 800 telephone number (at least from what is on their web site).

Thanks for any help.

Here's a great noise circuit

Purchase a spark gap generator, a.k.a. Model T ignition coil, mount a 10 penny nail on an insulator inside a coffee tin, at right angles to the base of the can. Connect spark generator to nail, ground to tin. Generate spark and watch the mcw RFI!

Guaranteed to knock out X and K band radar units, will probably wreak havoc with cell phones too.

This, by the way, is in the spirit of jest, and probably apocryphal legend.

Dennis,

I was in the same situation as you a while back. It was before the IC-2800 was out. I put out the question here on rec.radio and got back about 15 replies.

To make a long story short, I got the Icom 2710H and love it. There were numerous replies about the poor readability of the Kenwood in sunlight as well as big problems with IM in metro areas. Also looked at the 8100 at Dayton and found it to run too hot to put my hand on, even though it was in the receive mode----a bad sign. Also had a dealer that handles them all tell me that they have more reliability problems with the 8100 than the others.

I sold my two touch lamps after I experienced the same
problem .
I would recommend that you don't even offer to fix the problem with your neighbors lamps. First of all it's like admitting that it's your problem, not theirs. And second, if something ever went wrong, such as the lamp causing a fire, or getting a shock from it, you would be liable.
I've down that road with trying to be Mr. nice and filter a neighbors TV. When the neighbor bought a whole bunch more electronic "junk", telephones, answering machine, and computers, which all received my signal 5x9, I became the villain. I should have just told them to call the manufacturer. Because as all hams know, none of this "junk" is supposed to receive amateur transmissions.

Hello All:

I still have to following items FOR SALE:

* ALINCO DX-70TH, HF/6M, Transceiver, near new condition. Comes with EDS-4
(remote cable kit).
Radio does have the MARS/CAP modification due to MARS affiliation.
Also have the MFJ-1272BYH TNC adapter for it. $580.00 (plus shipping).

* ICOM IC-2710H, Dual band transceiver, near new condition. Comes with the
UT-104 CTCSS tone decoder module.
Radio had the MARS/CAP modification due to MARS affiliation.
Also have the MFJ-1272MYV TNC adapter for it. $350.00 (plus shipping).

* DENTRON DTR-1200L, HF amplifier, very good condition. Amplifier covers
80, 40, 20 , 15, and 10 meters.
Unit has two very new Svetlana 572B tubes (one year old, little use).
Full output on all bands (~700W). $400.00 (plus shipping).

If you are interested in any or all items, please, e-mail me directly:
n3yyp@arrl.net
I do have pictures available.

Cheers,

Cliff Owen

QST recently ran construction articles on scalar network analyzers and
tracking generators to be used in conjunction with them. With modern
chips, they aren't that difficult to build if your requirements aren't too
extreme (ie you'll tolerate an 80 dB dynamic range). That's sufficient
for most any alignment task.

Source record: 92405

Gents. I see two problems here. The obvious one is measuring two tones on one scope trace. You MAY be able to slow the trace way down and look at what looks like the two tone test envelope. It'll be at the difference frequency of the two tones. If the two tones are equal amplitudes, the envelope should go to zero at the "zero crossings". I don't know if this is a good way, however, not having tried it. It should be hard to trigger the scope to get the envelope stable.
Number two is WHERE you measure it. If you're on FM, you must go at the input to the decoder to do it right -- because of the pre-emphasis and de-emphasis in the radios. If you use a Station Monitor, as you say, and not knowing what type it is (I thought the old 1950's Motorola unit was called a station monitor), it can mess things up. In order to measure FM deviation, there will be no de-emphasis in the station monitor receiver and resulting scope display, whereas the receiver receiving the tones will have it. Therefore, it won't be an indication of twist at the decoder. That is, the tones have 6dB per octave pre-emphasis. You'll have to compare the levels to the 6 dB per octave pre-emphasis to get the twist value.

I'll bet there's a more clever way without resorting to a spec analyzer or a long construction project of filters...

Good luck, Steve K9DCI@arrl.net

4808. Re: Car battery with IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-07 00:00:00 UTC
From: John Buck <kh7t@arrl.net>
Message-ID: <384D742E.B6572881@arrl.net>
Source record: 92406

Congratulations on you choice of the IC 735 as a starting HF radio. Your thoughtful consideration of the battery tradeoff indicates that you will be a welcome
addition to our hobby. Welcome.

Your evaluation of the battery types appears about right except that I think the
10.5 volt and 8 volt end discharge numbers you quote are for full rated cranking
amp loads much greater than the IC 735 20 amp peak load. The battery delivered
Ahr is much greater under lighter loads than at very high current loads.

You will want to keep the battery voltage above 12 volts. Include the drop along
the wires and fuse to the radio in your thinking.

A car battery works very well with an ICOM 735 with the following considerations..

You should remember that the duty cycle during transmit is only about 20 to 40%
for SSB, depending on the amount of speech processing, (40% for CW) and that the talk time is way less than 50%. So your battery drain on SSB is probably only
about 10 to 15% of the estimate you made. You can do your own numbers, but the battery will last all day on SSB or CW. Continuous modes like FM and PSK
or TTY are of course 100% during transmit but your receive time is still more than 50%.

A more important consideration is the fumes from the battery. If used and recharged in an unventilated space the smell is bad, potentially explosive, and not good for your lungs. The battery compartment must be vented to the outside. I have experienced old auto batteries leaking acid. Even so, I have used
auto batteries as the primary source for an IC 735 for years. The venting is the
only serious problem if a marine type plastic housing is used to contain the battery.
I do not recommend use of an old car battery unless it is properly contained and
outside. They can explode due to internal gas buildup and shorts. The result is
not good for the carpet.

You do need to keep the power leads to the radio reasonably short.

A marine type or golf cart type deep discharge battery is a much better choice than the auto type battery. They live much longer in this type of service. but have the
same need for attention to venting. The no maintenance auto batteries also need
to be vented. They may put out less gas but are not sealed. I would look around
at the golf cart suppliers, solar sites and marine stores to find what batteries they recommend. Some retail level "marine deep discharge" batteries are not that much
better than good quality auto batteries. But the good ones are much, much better.

The gel cell is a much better choice. Even your 7Ahr gel cell may be able to support the 735 voice peaks (look at it with a Scope) and with a charger running you may be able to go all day with a 1 hour emergency reserve. The ideal would be a large gel cell with a smart charger. 20 Ahr sealed units are readily available and work fine with the IC 735. I have no qualms about

using the sealed gel cell inside my room.

You will not be satisfied with an old style 'dumb' charger that does not have
automatic voltage detection and current limiting.

Oh by the way, you can quadruple (or better) the battery time by turning down
the power output. With a good antenna you do not need the 150 watts most of the time. This also allows you to get more time out of a low battery without
distortion caused by low voltage. The battery voltage goes up with less load.

In summary, a good battery and charger system works extremely well with the added benefit of having significant emergency power available when the AC supply disappears. The cost is probably about the same as a good used power

supply such as an ICOM IC-PS-30. I use both.

Good luck

I'm trying to locate the operator's manual for a kenwood tm-732a that was given to me. I would really not like to have to pay 20$ from the Kenwood distributer if at all possible. I am willing to pay for the postage if anyone happens to have one lying around that isn't getting used. (804)648-0657 I have no computer access--usually--so please call me if you can assist in this matter.

I am possibly in the market for a desktop mic and wonder if the Heil Goldline
would make a good choice. I would get mine with the HC-5 element, and I guess there is another element or setting which is why they came out with
this new model. My rig is a Yaesu FT-920. Does anyone know if Heil also

makes a desktop base / switch setup. All I see available is there footswitch
and handswitch (and the switch on the mic itself) but I would like something
on the desktop with a momentary and a locking ptt switch.

Any response would be appreciated.

One of the major factors in there being so little 220 gear is that there is NO 220 band in Japan. Since Japan has 2-3 times as many hams as the US the big market for 220 gear is not in the country that makes most of the equipment. And just how many US hams are on 220??? I own a 220 repeater here and I can tell you that there are less then 6 Hams on 220 in this area. No manufacturer wants to tool up for that small of a market. Now if we could convince Japan to open a 220 band we would have all the gear we want!!!! Maybe we should try to get TEN-TEC/MFJ to make 220 gear....<there is a Ten-Tec kit for 220>

Hello Lee,

I'm not sure who responded from Timewave sending you to ICOM. But they were in error. As a mater of fact, Randy Gawtry, Timewave's president runs an ICOM.

This is a question I have answered on numerous occasions. The PTT output you need is explained in the section of your manual detailing how to connect a linear amp. There is a PTT on that jack you can use. The most common mistake is to use the PTT in which is meant for a footswitch or other accessory.

If you have any other questions, I am jdouglas@timewave.com or (651)222-4858.

Now that is exciting news.

I have a fairly complete collection up till shortly after Jim Fisk died but then it shifted a bit, I shifted a bit, and for much of the last decade it wasn't readily available here. I've been tempted by the microfiche version, to fill in the missing issues and get things nice and neat. Other magazines, one could take out the "good" articles and discard the rest, but there never seemed to be much filler in Ham Radio. But the microfiche does require that you buy it all at one time, and I've never felt like spending that much for the whole set.

When Ham Radio shut down, and CQ bought the remains, they made a big deal of selling off the back issues. But I also remember that they carried a steep cover price, which is okay to fill in an occasional issue but not conducive to filling in complete years at one time. A while later, I contacted CQ to see if back issues were still available, and I was told that much of what was left had been discarded.
Judging from the price of QST on CD-ROM, I assume Ham Radio on CDROM will be more affordable, if for no other reason than one could buy it in stages.

4826. Re: How to measure touchtone twist?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-07 00:00:00 UTC
From: Jim <Jspaz@i-55.com>
Message-ID: <384DB7BA.A4D1A137@i-55.com>
Source record: 92424

You may want to start with a much easier problem to look
at. Start with using a service monitor and measuring the
deviation of the transmitter used to generate the DTMF
tones. Make sure the tone level as measured on the service
monitor, is no more than 3.3 Khz. Much above this and most
radio systems go into compression. Once the tones go into
compression, they get distorted and will not decode.

This compression is very noticeable when used in repeater
systems. Most radio shops don't adjust the repeater audio
throughput correctly. They generally will give 4.5 to 4.8
Khz. deviation output for 3.5 khz. deviation input. Can't
do that in a system where DTMF tones will be used.

Set the repeater up with 3.0 Khz. input and set the
throughput to no more than 3.5 khz. output. This will give
you the correct repeater audio level setting. If you have
an old GE master II manual, that's the way even GE told
their technicians to set them up.

On portable or mobile transmitters, the DTMF audio levels
are important as I have stated before. Most of the Jap
Track radios you buy today, have way too much audio level
set in them. Measure the deviation and reset the levels as
needed.

If you are still having decode problems, then start looking
at where you are pulling the audio out of the radio.

Hmmm, but RFI from the switching power supply may be a problem. See the January 2000 issue of QST.

I have run my IC-735 from a marine battery for years (with appropriate re-charging, of course) and it is really a quiet power supply. Note that power output drops as a little voltage drops. I think the IC-735 is spec'd at 13.8 Volts. The receiving end of the QSO may not notice, tho'

I work for a telecommunications equipment company, and have all kinds of fancy equipment laying around for measuring such things. What I end up using most often is a PC with a sound board, and a piece of shareware software called COOL EDIT. This program includes an audio spectrum analyzer that works quite well. I'm sure that there are others out there, and a quick search on the web would probably turn up several examples. Unfortunately, I don't have the URL for Cool Edit handy. Again, a quick web search will probably turn it up.

Sometimes the best hardware solution is a software solution....

A NEW SAFE & QUICK WAY TO CHANGE ANTENNAS

Prevents damage to your radio's sma antenna connection due to having to change antennas for mobile,base or to a better quality than stock antenna use. Factory repairs are expensive. Adapter will take all the wear,Instead of the chassis connector. By useing this new design adapter you can safely and quickly change a better selection available of bnc antennas or connectors at a low cost.

Adapter has gold contacts with a black neoprene rubber covering. Low profile design adds only 1/2"-to-5/8" depending on radio model to the overall antenna length. The rubber base seals to the top of the radio with no spacers needed to prevent moisture and dirt from entering. The base also provides a positive support for all antenna applications. No need to remove adapter once installed to make a safe and quick antenna change.

4837. Car battery with IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-07 00:00:00 UTC
From: Nicholas Bluhm <Nicholas.Bluhm@flinders.edu.au>
Message-ID: <82istl$3ot$1@nnrp1.deja.com>
Source record: 92554

I'm just awaiting the final paperwork in the mail so that I can rush off to obtain my ticket. In preparation I recently purchased an IC-735 in great condition, but have not yet organised a power supply. In the meantime I've simply been using a 7AH gel-cell so I could at least *listen* to the thing.

I know that deep-cycle LA batteries are most often promoted for use with tranceivers. However, I was wondering if a car battery would be OK? I don't want the voltage to go down below 12V anyway and would have a 4 amp charger (or higher if I get another one) connected and on while the radio is in use.

Is this likely to be practical? For say, a 100 AH battery, how much talk time am I likely to get in without discharging the battery below about 85% of its capacity under these conditions? According to some amp-hour rating vs current drain curves I've seen, such a battery might for example give me 60 or 70 AH with a drain of 20 amps. So that's three and half hours at best to discharge the battery to 10.5 volts (100% discharge). If car batteries are best not discharged more than to 85% of their capacity (ie. 15% used up), then .15 x 210mins = 31.5 minutes transmission time. More if the charger is attached and running while the radio is in use. Do these calculations look right? Have I missed something? If this is right, then a car battery (unless of very high capacity) doesn't look like it would be very useful. Perhaps an hour our or so of chat time if I do half the talking ...

On the other hand, deep-cycle batteries are rated down to discharges to 8V (I think), and tolerate relatively greater depths of discharge (but ideally still not more than 50% if I understand it correctly). However I suspect such a battery will still not be very useful to me once it goes below 12V. So I'm wondering how much extra time I'd get out of say a 100 AH deep-cycle battery compared to a similarly rated car battery?

Can anyone shed some light on the above for me please?

PS. I'm assuming that the IC-735 will not function well with voltages below 12V.

Source record: 92555

After going thru *3* different IC-746 tranceivers, it has become very obvious these rigs suffer from a defect that creates an objectional popping/fluttering/frying noise in the AM mode. This has been verified thru on-air tests on 10 meters, as well as local samplings of AM output with my own TS-570 rig. The indicated spurious audio appears ONLY on modulation, and is at about half the volume of the primary voice content - the unmodulated carrier is clean, but AS SOON AS modulation at ANY level or power setting is applied, the defective audio is obvious. This has been verified on *3* 746's, occurs with or without compression applied, on actual antennas OR into a dummy load - several different microphones have been tried as well.

For those NOT planning AM operation, no problem - all other modes and functions seem fine. I would be interested in hearing from other 746 users suffering from the same defect - and of course, any TRIED and PROVEN cures... I really WOULD like to use mine om AM...

YES, I HAVE been in contact with Icom on the problem, with NO satisfactory results...

You can sometimes find SW rigs on sale with SSB capability for 100-150, but a decent one like the Sony 7600 or Grundig Yacht Boy 400 will cost 150-200. I have a Sony 7600 and despite its few flaws, it's a solid rig with good sensitivity and is easy to use. I've listened to ham traffic on 10, 40, 20, and 80 SSB and have had no problems.

What frequencies are you using for the shuttle?

Email me direct if you want any more opinions or info.

> BOTH ARE FINE RADIOS BUT I STUMBLED ACROSS A GREAT DEAL WHICH IS
> HARD TO PASS BY.......

I understand that there are a number of problems with image response with this rig on some of the HF bands, i.e. shortwave stations showing up where they don't belong. From the little I have heard Yaesu does not have a solution for the problem as yet.

The IC-706MKIIG you have a choice of several IF filters at 9 MHz, audio DSP filtering and IF shift, selectable through the menus, for SSB and CW etc. You have a total of 3 plug-in filters from which to pick from. All of the filters can be added or replaced because they are plug-in options. The FT-100 filters you have to solder in place.

I like the Icom's ability to use alphanumeric labels for the memory channels where as the Yaesu's has more memory channels, but you can't name them.

Also a number of dealers I have spoke with claim they sell more IC-706MKIIG's than they do FT-100's.

The standard NiCad charger works fine for the NiMH battery pack for slow
charging ONLY. If you want a fast charger then you will need to get one
specific for NiMH.

I am looking around for an affordable ANALOG, not Digital, computing swr and watt meter. No calibrating, just look at the swr and power without having to turn the calibration knob to use it. I just want a reasonably accurate indication, I don't need "Bird" quality. Just tired of setting the knob on my swr meter. Autek Research has one, the WM1, most other's don't tell you, or don't want you to know that you have to calabrate the meter each time you use it. Thought I'd ask around before I bought one.

> for a while. What else should I know about these radios????

They both get hot when used at high power for a while! The Yaesu is a smaller radio so it gets hotter faster and you have less radio to hold on to when it does. Also the belt clip on the Yaesu is real cheap and breaks off way to easy. Also with the whip antenna on the Yaesu makes the radio top heavy and will try to flip out of your hand, or pocket, if you're not careful and it will not stand up on end on a table without falling over.

What is nice with the Yaesu is you can cross band with it while you can't with the Kenwood. Also the standard receive range is far larger than the Kenwood for general scanner use too.

I have a TH-G71A and I love it.. The selectivity of the receiver
is exelent. Also it has a commercial style receiver. On some
repeaters when the signal drops you don't hear the sql tail.. Its
a real sturdy radio. Mine receives 118mhz ~ 173.995mHz in vhf and
320mHz ~ 469.975mHz and 800mHz ~ 960mHz (less cellular).. So it
may not be a wide-band receiver but it does atleast cover 800mHz and
I might add it does very very well there, I have 3 trunks programmed
in and scan between 16 freqs only locking out the data channel and
it does quite well. I like the speaker quality on this radio too.
Not weak or tinty, its commercial grade.. I highly recommend the
G71A :)

4856. ft-707 and ft-727R help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-07 00:00:00 UTC
From: frank@sirius.ccii.unipi.it
Message-ID: <82in8o$jg3$1@pisanino.unipi.it>
Source record: 92573

Hi all,
I posted this request some time ago but didn't receive any feedback,
let's try again :-)
Yaesu ft-707s, 20 Watt version, the problem is: when the mode knob
is turned in CW-W and in CW-N modes the output and QRM disappear, the
speaker become silent. I'm still able to transmit though.
The CW-N filter isn't in his place, I've never had it, but jumpers to
the SSB filter are present. Also I believe that when in CW-W mode,
the SSB filter should be used so it shouldnt be a problem of IF part.
Does anyone have an idea on where might be the problem?

Yaesu ft-727r handeld VHF/UHF, I haven't the schematics of this rig
so I'm very clueless about the problem: the light bulb near the LCD
display got broken and went short circuited, since then, when one
press the "light" switch, even the keyboard backlit's led don't get
any power and there's almost no voltage on the light bulb's terminals
(which of course aren't anymore shorted). I assume that a power regulator
is broken somewhere. I'd also appreciate if anyone could send me schematics
of this radio; I refund expenses.

Thank you in advance and please reply also by private email.

Francesco Messineo IW8QPI

I am in the process of buying a new mobile rig.
Here is my wish list:
DCS: I definitely need DCS as my fire brigade uses it (please don't flame me on out-of-band Rx/Tx, it's already been discussed and I know what you think about it)
UHF: I need UHF Rx to monitor emergency services from my area. Tx would also be nice (in the ham band only as I don't need to talk to those agencies on UHF)
Cross-band repeat: This would definitely be nice as I sometimes find myself using my HT in remote areas and I could certainly use the extra power to reach the repeater

At this point in time, there are no rigs that do all this. The FT-90 is close missing only the cross-band repeat. I could live with it but I am a little sceptical about the toughness of this cute little rig. I'm afraid it will overheat quickly and won't survive long QSO's. I host a weekly net on our "local" repeater and it usually lasts more than an hour. I need at least 25 watts to reach it. Miniaturization is a good thing but I still have doubts about it such as heat dissipation.

There is the FT-2600 that only has DCS. Once again, his little rig looks good on paper. I'd be missing UHF and cross-band repeat but at least I would be able to talk to my fire brigade and listen to our polide department. It's not expensive as far as features are concerned but I still feel there are too many things missing as far as the features I need. ADI also sells a 2 meter rig that has basically the same features as the 2600.

I would really appreciate your comments on both these rigs. What do you like/hate about them ? Do you think they will survive long QSO's ?

Are any of you guys Yaesu insiders ? Do you happen to know what Yaesu has on the drawing board ? What I am looking for will probably be available in the near future as a top of the line rig. I would really like to know how long it will take before it hits the street. Should I wait or go ahead and buy one of the rigs mentionned above ?

One more thing. Do any of you know if DCS is transmitted through cross-band repeat ? Let's say I use my HT that sends DCS with a mobile rig that cross-band repeat my signal to reach my VFD. Will DCS be retransmitted by the mobile rig ?

I can make no bones with that, I know exactly what you mean, however to a general news group such as this where many contributors coming fresh to this arcane art it may be a more practical solution for them to get on the air to use the simpler more effective methods until such time that they are old hands and have the freedom of options.

> Thanks for the good wishes.

UR WELL COME

> Oh. By the way, I have got a (homebrew) wobbulator.

With varactor diodes so readily available I expect that there are many more wobulators about than formerly.
Of course many of the microwave enthusiasts will remember using the reflector voltage of a reflex klystron to make a wobbulator for uWave.
The RF board of some TV sets is very easily converted into a spectrum analyser. connecting it to the TV AE can reveal a lot too. :)

Agreed
I think that perhaps we have both been spoilt having such fine test gear around, but considering others in this ng that do not have such resources was to the fore of my mind.

I think from your comments that the group , (which has a number of innovators in it), might consider the design, construction, testing, and a book on how to use it to best effect, A Wobbulator and Calibrator.
Twould be nice if the instrument would also act as a spectrum analyser, not such a big step once you have the swept oscillator to act as LO for the instrument.

Gary7SLL, The co-ordination could happen on Glenn's Mailing list :)

Think about it, you do not find that much mobile or fixed equipment
either. Part of the problem is the frequency is not that close to a
commercial FM band, so we do not have much good commercial
equipment to convert for 220 Mhz Repeaters.

Both equipments purchased directly from Ten-Tec, both in original packing,
with manuals.
I will pay shipping to Continental U.S.

Corsair Two, factory mint. Includes modification for QSK operation of
Power Amp, as per Ten-Tec instruction. This mod does NOT IN ANY WAY effect
"barefoot", or Power Amp by "relay control" , operation. $750.

Model 263, matching External VFO. Permits "split" operation, somewhat
unusual by allowing transmit on one frequency while allowing receive on
either or BOTH splits. $150.

Sell together or Corsair Two alone. 73 N 7 D M

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a complete Johnson RF Amplifier less the two 4-400s. This would make a great spare, or can be matched up to a PS and be a nice heavy duty HF Amp or it can be a start to collecting the parts to put together your Desktop KW. It uses a very large Roller and a very large variable. There are no modifications and condition is good. It has some blemishes in the paint that might clean out or it can be re-silked This was taken out of a working desktop that was parted out.
Asking $450 shipped or best offer. 73 Chris VE3NGW/W4 Florida

4880. FA: Collins Mechanical Filter for KWM2

Hi, I have a bunch of stuff what I assume to be the following:

>>Motorola Mitrek lowbanders. 3ea. Crystals say 42.100 so maybe the proper split for 6 meter conversion? one with 1 set crystals, 2 none. includes mtg. trays. cases in great shape as are internals.

>>Control Heads: GE Master II, grey/ivory clamshell with 5pos. rotary, vol. rotaty, f1/f2 rocker, on/off rocker, and search toggle switch. Several from fair shape to really good shape with mics.

>>Control Heads: GE master pro? old grey with two silver rotary knobs, red light, toggle, etc. the really old ones. Have mics.

>> Control Heads: Motorola Mitrek, etc.:? Orange, brown and ivory, 3 heads, one with a,b,c,etc. switches (pl head?) two with np1/np2, f1,f2, etc. one dual mtg. bracket. One with mike. one uncut cable, maybe more....

>>Several uncut cables for master pro, masterII, and a couple mitrek.

>>4 GE MVP HT's. crystals say (tx removed) 154.xxx so they're vhf hiband. good shape with LOTS of stickers, etc. 2ch, 4ch. bad batteries, of course, and a couple of vehicular chargers, no cables. one missing antenna. fifth one for parts, won't come on. others do rx., and have a pl reed here and there.

>>Whelen Power centers model PCC. 4 switch switchboxes. about the same size as their sirens from a few years ago. Probably same box. one 2pos. for lightbar, one 2pos. for takedowns and one 3pos for front/rear flashers and a momentary labeled Hi/Lo. 4 each boxes. one missing a switch, one with an added toggle. all but one I think has orig, cable and plugs. fairly good condition, one with little surface rust in the face. great hi-amp boxes. clean, paint, good as new. not dented up or squashed.

Sell, trade, whatever. cheap, cheap, cheap! Not looking to get rich or give you sticker shock.
email if interested and thanks for the time!
Randy

The cable for the Yaesu VX-1R ADMS programming software works for programming my Icom W32A.The Icom uses the OPC 478 cable.I have used it to program the Yaesu also. I will have to try the Yaesu cable on the IC 2800 and see how that works. The Yaesu cable is $39.95 with software included.

Greetings! I was wondering what you thought of this idea: I already own an Astron 35M power supply, but I want to have battery back-up power. Can I put a "smart" charging device between the power supply and say a 20 Ahr gel cell battery and hook my leads directly to the battery? Just curious as to what you think about that. Thanks!

I recently bought one of this great HT (in my home country -Portugal) and I couldnï¿½t be more satisfied! (I have had previously one FT-50R and one VX-1R).
I'm looking for help because of something that as happened and I would like to make it like it was before.

When I first received the ht and was reading the operating manual and trying it's features, Iï¿½ve discovered that when I pressed [F/W] + key [8(BRO)], the screen that was showned to me had written "TV", the Channel number and the frequency of that channel (TV Channel).
Also, when pressing [0 (SQ)WX] and holding, it played a beep (the kind of beep saying that "no, I canï¿½t do that!") and do nothing.

After reading and trying all the features, I did a full reset (Band + HM/RV + TX PO + "Power ON") and could only change between ham bands - 50,144,434 (before the reset it was wide open, rx and tx). Next I did a full reset again, and it became wide open again.

My problem is that at this moment I can do the "pressing [0 (SQ)WX] and holding" function and it works (Here in Portugal thereï¿½s no "Weather Broadcast channel") and the "pressing [F/W] + key [8 (BRO)]" doesnï¿½t work anymore!
Since Iï¿½ve no use for the "Weather Broadcast channel" I would like to use the TV channel "feature"!
I have the Optional Barometric Pressure installed.
Can you , PLEASE, help me?

Thanks in advanced

I was a big fan of hr and was even published twice in it. Some months ago,
someone at CQ put out a request for a few back issues that they were missing. I
had them and offered them up, but they found them elsewhere.

I assumed at that time that they were going to do a CDROM. However, I was in
Newington in September and talked with one of the editors that was working on a

piece I did for the latest Antenna Compendium and he mentioned that they were doing the CD. That's all I know it, but I too look forward to having everything in one place. I can use the room!

Before you buy.

4897. ICOM 701 - transmits 400hz low

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-08 00:00:00 UTC
From: john@neknetwork.com
Message-ID: <384DD1BD.E762B6BF@neknetwork.com>
Source record: 92442

Hello All,

A friend of mine and I were testing out our rigs and he noticed that my ICOM 701 seems to xmit about 400hz lower then what is on my display while on 80 meters. On 40 meters, it's about 300hz low, 15 meters a little less and just about perfect on 10 meters.

The Frequency Set dial under the top cover is turned all the way counter-clockwise. Using WWV on 15.000.0 CW sidetone, I can tell that my rigs 900hz CW tone is a little sharp. Turning the dial clockwise makes it a lot sharper. I confirmed this with my friend, turning it clockwise moves my rig farther from the target.

Reading the manual, it appears that the complete Frequency adjustment requires a bit of disasemmbly of the radio and a Frequency Counter to do the adjustment. I don't have a Frequency Counter, and I'm a bit uncomfortable tearing the rig apart. There isn't much in the way of Ham Radio repair shops up this way, and I really don't want to send the rig out for repair in the mail - it's not worth what it would probably cost to ship, repair and send back, and I don't want to be without my radio for that long!

My current fix for the "problem" is using the RIT to make up the difference. It's a bit of a hassle, but it appears to work.

Any other hints, tips or advice? 73's

> Strange...I have tried this and have no such problem, except when my
> noise blanker is on.

James, the problem is on TRANSMITTED audio in the AM mode - NOT
receive - and the noise blanker has NO effect on the transmitted
signal...

BUT, if you have an outboard receiver available, tune it to the same
frequency as your 746 - being careful to disconnect any antennas from
the monitoring receiver, and using enough attenuation to provide a
"normal" signal strength to the monitoring receiver. While
transmitting in the AM mode on the 746, and speaking in a normal
fashion, listen with headphones on the monitoring receiver for a
"flutter", or similar effect superimposed on the transmitted audio at
about 1/3-1/2 the level of the transmitted audio. This "flutter" will
follow voice modulation, and stop completely when audio is not
present. AS SOON AS *ANY* audio at any level is applied, the flutter
will return - the effect is more noticable when the speech compressor
is engaged, but is still present either way. You cannot detect the
effect with the monitor built into the 746, only by an outboard
receiver - either your own, or another station capable of monitoring
you clearly enough to detect the effect. In my case, normal AM
contacts on 10 meters AM have NO problem hearing it. I won't go into
detail as to all I have tried to isolate and eliminate the problem,
but *trust me*, there IS a defect, and since it has surfaced in *3
separate* 746's, I pretty confident it is NOT an isolated condition!

AND, don't misunderstand me - I very much like my 746, and regardless
of this AM problem, have NO intention of getting rid of it!

> more important to me.
> 73's TIm

There was a side-by-side comparison review, conducted by CQ-VHF, between the FT-100 and the IC-706MKIIG. From all of the informal tests, and usage by many Hams over a month's time, no significant difference in receiver performance was noticed to recommend one rig over the other was reported.

What did seem to be noticed was the difference in the LCD display. The MKIIG tended to fade to black on a hot dashboard where as the 100 appeared not to have any heat related problem. Many Hams liked the easy to read MKIIG display in daylight and the 100 display at night.

I got out the FT-100 brochure to look at the filter options. From what I can see Yaesu does not offer any IF section filters for SSB! The only filters they offer are 2 CW ones at 300Hz and 500Hz along with a AM filter at 6KHz.

At least with the Icom rig you have a choice of up to 3 filters through the menus to use. There are 5 optional filters offered by Icom, 2 SSB filters at 2.8KHz and 1.9KHz while there are 3 CW filters at 250Hz, 350Hz and 500Hz.

What many Hams like about the FT-100, and the FT-847, is the optional ATAS-100 active tuning system. For mobile use, from what I have heard, is the system works, period. One caveat, the ATAS-100 does not cover the 160m band and most of the 80m band too, if I remember right.

Hello all! I have a UHF HT-1000 for sale, is high split (450-512 MHz,) but will program out of band split. I had all amateur frequencies programmed, but the carrier or tone squelch would not open up on one of my favorite repeaters, output 442.000.....too darn close to the edge of it's capability when programmed out of band, I suppose. It would receive just fine if I pressed the manual MONITOR button, though. Works fine and within spec on the rest of the frequencies above that 442, though. I got glowing audio reports wherever I went with this rig, typical Motorola quality at work here, but am buying an amateur HT for amateur work. Radio is a 9.5 out of ten cosmetically, with a few minor scuffs and scratches on the front. Is an intrinsically safe model (for hazardous atmospheres,) factory mutual approved, and so marked on the base (with the green dot and triangle,) a good choice for emergency services / confined space / mine / industrial type work (with the proper batteries.) Package comes with radio, standard rubber whip antenna, THREE batteries (two of which are virtually brand new, but all working HARD!,) and a standard rate charger. Radio model number is H01SDC9AA3DN. I want only $400 for the entire package, which is a fine deal. I will guarantee that the radio is working 100%, with no problems when you receive it. Buyer will pay shipping and insurance by his choice of carrier. E-mail me at:

jdavoli@nospamerols.com

and remember to remove "nospam" from the address.

Thanks for looking!

Joe Davoli, KB3DMF

From KA9CAR
I have had my WM1 for over a year now. It has relegated my 30 year old
Heathkit SWR meter to the closet!

There are just the three switches you see on the front.

Power, Peak / Average. and a 3 postion range switch, 20/200/2000.

No there is no routine calibration, It even shows the SWR while you are
talking on ssb! Which is how I generlly notice that I forgot to tune my
wire antenna!

Buyer disappeared! Very good condition. Will need battery, charger cord has
been cut for use with power supply but is all there, just put back together.
no mods done. have manual, schematics.
Looking to trade for MOTOROLA handheld, 5 watts.
Not asking for an HT1000 here.... but an HT50 or similar would be nice. I
could use a P100 if it's the rib program type. Then if all else fails, I'll
go with a Spirit or similar.
Can use following freqs:
151.625
154.570
151.925
462.600
462.575
Prefer something programmable, but we'll see. Must have charger!
I would trade this PLUS other motorola related items for a nice p200 or
ht600.
Just let me know what ya want to do!
thanks,
Randy

I'm using an Icom 746 with an Astron SS-25M. Due to limited counter space, I have the switching power supply sitting directly on top of the transceiver, and have no problem with noise at all. My assumption has been that both Astron and Icom did a good job of shielding their gear.

As I understand it, one of the big features of the Pro is it will have
the digital signal processing **inside the AGC loop,** rather than
following it. So you'll be able to strip away strong signals before
they start pumping your AGC. Whether that's worth the extra thousand
dollars, I don't know, but it sounds like dsp, in general, will be
more fully integrated into the transceiver.

4922. Motorola MT-600 & HT-1000 Programming question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-08 00:00:00 UTC
From: Curt Jutzi <curt.jutzi@intel.com>
Message-ID: <82m4lj$pcd@news.or.intel.com>
Source record: 92467
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Mt. Hood Ski Patrol has been donated MT-600's and HT-1000 radio's..
Can someone tell me how I would go about programming these for
specific freq. (hopefully they are not strictly crystal radio's..)

Curt
Please reply to :
cjutzi@teleport.com

From: Sean Baxter <NOSPAMsbaxter@gte.net>
Message-ID: <6Rw34.418$2g5.11019@dfiatx1-snr1.gtei.net>
Source record: 92470

It sounds like you have the money ready for the 756Pro, I would wait. I have the 756 and like the radio. I do plan to upgrade to the Pro after it has been out for 6 months or so. You can bet there will be bugs in this radical redesign of the 756.

I bought the 756 when it first came out. I sent it back to Washington for the bug fixes.

However, I have seen used 756's going for about $1,500, that is a good price for this radio.

4928. Wanted: AR-9800 & AR-9810 software! (for American Reliance EPROM Programmers)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-08 00:00:00 UTC
From: John Goggan <jgoggan@dcg.com>
Message-ID: <384eb95c$0$96891@news.voyager.net>
Source record: 92473
Cross-posted to: sci.electronics.equipment,sci.electronics.repair,alt.engineering.electrical,rec.radio.amateur.equipment,rec.games.video.arcade.collecting,rec.games.pinball

I am searching for the DOS software for the American Reliance AR-9800 and AR-9810 EPROM Programmers. I have spoken with American Reliance, and thy only have the software for the 9820 available -- they cannot find any 9800 or 9810 software for their older programmers. The 9820 software is specific to the 9820 and does not work with the 9810 and 9800 units.

If anyone has one of these programmers or, at least, the software for one of them, please let me know! Thank you!

- John Goggan...
jgoggan@dcg.com

P.S. If anyone happens to need the 9820 software, just let me know. I think I also have the 9850 software someplace...

Your radio's are considered syntized, meaning they have a EEprom inside them. They are PC based programmed. You will need to obtain several things from Motorola in order to program them. When all is said and done you will have spent somewhere in the neighborhood of $600.00 made payable to BIG "M". You are better off taking them to a local Motorola shop for programming, it would be allot cheaper. Of course you could try and purchase what you need from this news group, less the software, would be a little cheaper.

Message-ID: <82mm7l$4k4s$1@newssvr04-int.news.prodigy.com>
Source record: 92482

I just bought one from AES today. I talked to Carl in Milwaukee about the FT-100. He said they are running out of current stock fast at the $1099 price. I asked him about reliability problems and he said that had been solved several months ago and that they had sold hundreds with no problems and that the failure rate was no greater than the IC706 or other radios. Does anyone know if the MD-100 microphone that I use with my FT-1000MP will work properly with the FT-100? Will I have to make an adapter for the mini plug that goes into the FT-100 or does someone sell one? I asked about the adapter that Heil sells for the FT-100, but they did not think that would work with Yaesu 8 pin microphones.

Having owned three Icom products (handhelds) and not being very impressed with their products, I am looking to buy the FT 100.
I have been really screwed when I tried to depend on an ICOM IC H16 VHF handheld. It was on this wildland fire in Oregon and I couldn't get sufficient audio from a fairly close repeater. Lack of power? Really bad audio? Whatever, it really made my day in a bad way. Add a thousand acres of burned timber.
As for the 02AT's, the audio circuits never seemed up to the task.
Anyway, I am just about to buy the FT 100. Not that I am an informed buyer.

UK prices for electronic products are frequently the same number of
pounds as they would cost in the US in dollars. Could be partially
that the tax (VAT) is already included in the price and partially that
many things just tend to cost a bit more in the UK.

I have never had good luck with the MC-85. I tried it on a TS-850, a TS-790, and a TS-870. All of these rigs sounded terrible with this mike no matter how I set them up. I switched to an MC-60, and it was night and day better, great audio reports and it drives the radios better. I now have MC-60's on all of my rigs - even my Yaesu FT-920 - all running from the transceiver's power.

I would suggest giving the MC-60 a try, you'll probably sell the MC-85 shortly thereafter (I did).

I use an MC-80. I've used in on a TS-440, TS-850, and TS-870, all
with excellent results. I no longer own a Kenwood HF rig, but I
still use the MC-80 on my Kenwood TM-261A 2m FM rig, also getting
excellent reports. I'll probably build an adaptor cable so I can
use it with my Ten-Tec HF rig!

73,
Dean / K5DH

4953. Re: How useful is IC-756 Spectrum Scope

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <Z_T34.266$xP3.33880@elnws01>
Source record: 92298

Hi Pete,

Even though some may disagree I really like the 'scope on the 756. Its also good for centering a CW signal, on the 12.5khz spread you can see the signals pretty wide and with the narrow filters its easy to center on the stronger signals in the passband. On 10 and 6m it takes a pretty strong signal to show up but its great for seeing whats going on. On 20 and 40m I use it to find a clear freq. I have a few other radios without the scope and I dont think I would say the scope the only reason I use the 756. It is a very intuitive and to me 'fun' radio to use. The RX is more then acceptable and I have had unsolicited great TX audio reports (SM-20 mic). Only downside to me is just 2 optional filter slots - guess you cant have everything :-) There is a few small problems that I have found with these (I have 2, 14xx and 40xx ser number) but I wont get into detail with them, e-mail me direct if you wish. But then again I have yet to find ANY radio that is 'perfect' so far.

73 and good luck with your decision,
Kevin

4954. OFF TOPIC, Digital VOM software?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <e1U34.15606$Lm2.306523@news.rdc2.mi.home.com>
Source record: 92299

I apologize for being off-topic, but I don't know where else to ask. I have a Radio Shack Digital Mutlimeter, #22-168A, with a PC RS-232 interface. The supplied software does not appear to work with Win98. Anyone know of an upgrade, or patch for this?

Thanks,
Bill Crocker

4955. Re: Car battery with IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: John Buck <kh7t@arrl.net>
Message-ID: <38500F89.CC51CFA8@arrl.net>
Source record: 92300

Most of the 'smart' chargers I know of use at least a couple volts headroom
to supply the battery. The really smart chargers take the voltage with limited
current up to about 14. 4 volts then drop back to 13.8 or so.

You can set the regulator to 13.8 volts and connect the battery directly to
the regulator through a light bulb such as a car tail light bulb to limit excessive
surge current. You have to make sure that the regulator will not be blown
up if the output is held high if the regulator is turned off. Some can be ruined
this way. If so you will have to use a series diode and set the regulator
at about 14.4 volts.

I get away with connecting a battery directly to the output of my ICOM
IC PS 30 power supply through a fuse but I do not recommend the practice.

Hello forum,

I am radio fan and program investigator.
I have extracted full control protocol for handling
IC-PCR1000 digital receiver via RS-232 or COM.
It makes possible to write your own software (using any program language)
with more flexible features,(handling many receivers from one PC,quck scanning
over known frequencies lists,etc.).

Please email me to: d673091@yahoo.com for prices and demo.

Y.F.

Don't pay too much for it. I bought one "new" back in 1995, and quickly peddled it to one of the new hams in the area for something with some versatility and more features.

I didn't like the receiver in it -- opens up way to easily even in slight RF situations. Make sure that the, if I remember correctly, 40 memories will suffice for you, too. I filled 'em up with local ham stuff, and local VHF public service stuff... Didn't have room for everything I wanted.

On a different note. That same radio is still in use w/o any problems. I, personally, wouldn't pay more than $100 for one of them, since they are a very basic radio.

The automatic antenna tuner in my Kenwood TS440 will not
match my Yagi or my vertical. A second Xcvr I have matches both.

Has anyone had experience trouble shooting or repairing the AT 440?
It seems that the motors are continuously driving to a limit.

Piero:
Let me just say that if you want customer service, go with Larsen. Yes they will cost a little more up front, and they might not look as sleek as some, but you can't beat the warranty. 3 years. One time I called them and said I had a probem with a dual band rubber duck, they sent me a new one and said just destroy the old one, no questions. Another time I had a coil on a 5 year old antenna crack (yes, I told them I did not have a receipt and it was 5 years old), they still replaced it free. Larsen has great customer service.

A couple of weeks ago I posted a message asking for two of the smaller knobs for the front of my Drake 2B. It has had some dreadful 'wronguns' on since I got it.

The first guy to reply ceased contact when he found I was in the U.K. The second guy to reply KNEW I was in the UK, said he'd sent them and now he won't even reply to my e-mails. I've offered him money too!

I am more than willing to PAY for a couple of knobs if someone will just help.

In an earlier posting another amateur offered to send me details for my RME69. I sent him $10 as agreed and I got a great set of copied info. and can now rebuild my radio.

ANYONE have a couple of knobs?

73

Simon (in the UK)

4971. Product Review: HTX-10 Radio Shack 10M mobile HF radio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38505009.B0A42D04@yahoo.com>
Source record: 92316

Robert, Have been playing with one of these for a month or so. See prior posting on extensive product review.

Issues that I've encountered thus far are:

1. ergonomically, dislike the "Function" key on the rit/xit button.
2. slight freq instability/drift in mobile environment due to vibration and temperature changes.
3. The FM hang (is the result of RF getting into the microphone on TX. Running mine mobile with a tuned resonnant 1/4 wave whip antenna (96 inches long). Putting a ferrite donut at the input of the mic connector, and separate dedicated grounding of the the radio chassis to the vehicle body cured my FM hang issue.
4. S meter is stingy. RF meter is too generous. Needs adjustment
5. No CTCSS encode for repeater operation (duh...)
6. No CW mode (also duh....)
7. Cheap, very cheap microphone
8. Mask programmed PLL ic -- no external loop mixing scheme, very difficult to modify rig for expanded freq coverage for use with VHF or UHF transverter
9. Audio distorition at higher volume settings (past 12 o'clock).
10. Transmit audio distortion at full mic gain, which is where the owners manual says to run the rig. (1 o'clock works better)
11. Repeater offset split (out of box) is set at 600 Khz, the 2M not 10M repeater band plan. (also duh....)
12. Lousy owners manual with no technical information or schematic diagram
13. Erroneous comment in manual and box that "You need a Technician license or higher to operate this radio" --- last I checked, Novices, Tech Plusses, Generals, Advanced, and Extras had 10M priveleges. Only the Tech no-code license is prohibited from 10M ssb priveleges.

14. SO-238 is difficult to tighten with heatsinks in the way on either side. Using a right angle adapter gives some finger/thumb room.

15. Lettering on front panel push buttons will quickly rub off

16. Clickety clack channel selector knob feels like it will break quickly

But hey...for the money, you cant beat it.

From: Jim <Jspaz@i-55.com>
Message-ID: <38506866.B944E79D@i-55.com>
Source record: 92322

Looking for a replacement front cover for a Relm, WHS 150 portable radio. The radio works fine, it's the front cover that has seen better days.

Jim

4978. Who Can Check 3-500Z's

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Murray Neece <radioranch@qth.com>
Message-ID: <38506794.5C3A49E2@qth.com>
Source record: 92323
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have a number of questionable 3-500 Z/s that I would like to know about without blowing resistors in my amp etc...Who can professionally or amatuerly(?sp) check them for me , under load so that I will know if they short under load and if not, their usefullness...? Would be happy to pay a reasonable sum for this service...Thanks Murray K5MDM

4979. Pinout for kenwood TS-140 mike. Manual?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <38507702.1DE00C9C@usa.alcatel.com>
Source record: 92324

A coworker has just bought a TS140, but he has neither a manual nor a microphone for it. He needs the pin out for the Kenwood 8 pin mike so he can wire up a hand mike -- and he also needs the operating manual.

Anyone I can put him in touch with?

Cortland Richmond

4980. Re: Car battery with IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-09 00:00:00 UTC
From: Nicholas Bluhm <Nicholas.Bluhm@flinders.edu.au>
Message-ID: <82n06b$4e6$1@nnrp1.deja.com>
Source record: 92355

Thanks guys for all those responses.

The cheapest new 20A power supply here in Adelaide is around AUS$300 (~US$200). I am quite happy to try and build my own sometime in the future, but for now just want to use a battery.

I've decided to get a 55 AH deep-cycle marine type battery, to be used in conjunction with a 6A automatic charger. I'll keep the battery in a box outside, just on the other side of the wall of the room in which I'll be operating.

Now... if the paperwork from the WIA could just come through so I can get my ticket in order to operate on HF, especially the 20m band :-) :-).

Cheers,
Nicholas (soon to be VK5something)

The IC-756 pro will go for $2300. Not $3300
I got this info from WATERS AND STANTON WEB PAGE IN GREAT BRITIAN.
They have the same radios there for the same # as in the USA but they are in British Pounds. For instance, a Ic-706 MK G goes for 1200 Pounds and a FT-920 goes for $1400 pounds etc. Yes, the pound has more value than the USA $ but forget that for a minute. The IC-756 PRO says
2300 pounds so expect it to go for $2300 in the USA after a few months on the market and yes it includes ALL FILTERS.

Hi Pete:

I have an IC-756 and enjoy the spectrum display. It is handy when working band openings on 6m or 10m because you can see activity on frequencies 25kHz up and down the band from the freq. you are tuned to.

Al, W2JUV

The Ham Station (http://www.hamstation.com) reports LIST price for
IC-756pro
to be $3900. So I'd expect the price to be $3300, not $2300.
There was a preliminary post to one of the pages that say the IC-756pro
SUCKS
for contesting. Guess we'll wait & see. From past experience, I'll never
buy a 1st introduced rig ever again. I'll wait till the "beta" testers
check out the rig, find the flaws, and manufacturer releases updated
product.

Message-ID: <384fbc22$0$96882@news.voyager.net>
Source record: 92381

Of all the HT's I've owned, the VX-5R wins out... hands down. I've had Kenwoods TH-22AT, and their TH-79AD... didn't like the receivers, and the radios just didn't have many features compared to the other manufacturers' models at the same time.

Then the Icoms: IC-Z1A, IC-T7A, IC-W32A. Better, in my opinion than the Kenwoods.

Then the Yaesu's. FT-50R and now VX-5R. 50R was nice and rugged, but too bulky (read: thick) to use comfortably. Then came the VX-5R. All the goodies, and absolute best WFM audio I've ever heard on an amateur HT. Several display modes, intuitive to use, and not to mention the fact that it's the most rugged HT ever built (die-cast aluminum case). The Lithium Ion battery is fantastic, and such a small package compared to the NiCd or NiMH for the FT-50.

I, initially, gave Kenwood a chance, but they just don't package enough features into a radio for me. My TH-22AT, for instance, had only like 20 or 40 memory channels, when the competitors had 100.

BTW, the lastest email from AES shows the VX-5R for sale for something ridiculously low price of, like, $315... Normally this rig goes for $359, so the sale price is *definitely* a great buy!

Good luck with whichever rig you decide to purchase. BTW, the heat isn't a problem with the VX-5R -- you've got to expect some warmth from a 5w HT that's that small!

Does anyone know where the safe sn# begins for
the FT-100. I had one back in May with sn#
starting with 9E. I returned it do to broadcast stations
all over the 10 meter band that should not have been there. Also received
poor transmit audio reports while
in the AM mode.

Anyone know if the above have been fixed??

thanks,

Ken N1KK

Source record: 92385

Hi Pete,

It's hardly an 'instrumentation class' spectrum analyser, but within its limitations it is useful. With up to +/-100kHz span, one can take a quick, and I mean very quick, look at a band and see if it has meaningfully opened; one can instantly figure out where the guy who's working split is listening (from the very visible 'pile-up'); one can find likely 'holes' in a crowded band; one can even determine, with a bit of experience, what the different digital mode signals are without listening to them. Many other good practical uses. Beyond a toy.

But best of all is it affords a better class of hallucination on contest Sunday afternoons . . .

No, it does not have CTCSS

A further comment, the book is very skimpy, does not even give the mic connection diagram! RS needs to put out a more complete manual! It is a HAM radio rig!

I noticed that rf can get into a nearby HTX-212 and key it, if the rigs or their antennas are too close, so I can imagine that a lot of rf is present around the rig, even when fed by coax to a vertical. Might need a ground at the rig? Just one day on air with it, pretty exciting!

> 73 Dan

Since 220 is the first band where Novices have any serious privileges this subject seems to relate to why there are so few novices. But I can't tell for sure which way it goes. Does the lack of novices reduce the pool of 220 users or the lack of 220 activity and gear simply discourage people from getting their novice license?

I think the TEN-TEC 220 Mhz kit looks wonderful. Computer control and most of the features of any modern radio! If my kids had stopped at Novice I would have bought a couple of these. As it is, the greater privileges of Tech lured them on to complete the tech exam. However I do think the TEN-TEC 220 Mhz kit is pricy. At $295 it didn't compare well to the Yaesu VX-5R that they both wanted so much, so off to the Tech bands they went!

Note that ADI makes a nice 220 mobile rig. ADI/PRYME makes a 220 handheld, and Alinco makes another 220 handheld, so they are not non-existant.

Chad,

I will have to agree.

We're a 5-ham family and we have and have had lots of HTs. When it comes to quality, Yaesu has the others beat. My IC Z1A has some slick features, but it feels like it will break to pieces if it drops. On the other hand, I've dropped my FT-50 so many times I can't count them. It still works like a champ. My VX-5R hasn't been dropped yet, but it feels more sturdy than the FT-50 and out performs the FT-50 in every aspect!

73,
Brent

I always have trouble with my Callsign especially on the air.
Saying Golf Seven siera Lema Lema on 2m sounds daft but I can garauntee
thgat 80% of hams put me down as G7SSL instead of G7SLL.
It is one of those mental block things which I'm quite sure that it passes
subliminally and can't be helped in normal peiople.
However when I use the phonetic alphabet on Two I collect some scornful
comments.

Which ever way I play it I can't win. :(

Here quite unitnetionally I'm sure we have an example of it happening in
TEXT.
This confirms my beleif that it is deep rooted.

What I need is a humourous bon mot that is suitable for broadcast on the
air.
Any suggestions for a legal one?
Of course humourous suggestions would be nice to read at this time of good
will; but please do not be offended if they don't get selected for the short
list. :)

Hello dr OM's

I am looking for solutions on building an simple audio cw filter. As far as I have seen there are two simple solution (excluding DSP):

One or several cascades of band-pass filters (I am bilding one based on a tl084 4 ampop)

One simple bandpass filter, drivind a pll, driving a audio oscilator. When the pll locks into the receiving signal, it would activate the audio oscilator, giving a qrm free signal.

Anyone has tried one of these last "pll filters"?

Thank you

Yes Doug, I do that now. I was not the one originally with the customer service problem, another person was, I was only replying to their post. I had a bad experience with Lakeview employees (owner?) at the 1998 Dayton Hamfest and I will never deal with them again! He was rude and ignorant. The others working behind the table said he was having a "bad day", but he didn't have to take it out on me.

You may be able to get this info from the Kenwood web site:

http://www.kenwood.net

They have an FTP site where you can access some of their manuals on
line. They also may be able to supply the mic pinout by email.
The mic pinout, BTW, is the same as ALL 8-pin Kenwood rigs ever made,
including VHF and UHF gear.

> which brand's short-wave radio/scanner is good and reliable?

You want a short wave radio. Many scanners do not receive short wave. There are some wide band radios that receive both short wave and can do some scanning. However, most of them are really designed for scanning and the short wave reception is not as good as on a short wave radio. Unless you are really interested in scanning, I'd recommend a short wave radio.

I have a couple of Sony short wave radios and I've been very happy with them.

You may want to check out Universal Radio at www.universal-radio.com. They specialize in short wave radios and carry several different brands. They have a nice catalog with lots of information on the radios that they carry.

Another good source of information is the book 'Passport to World Band Radio' from IBS (International Broadcasting Services). It is updated each year so you should look for the 2000 edition. It has lots of information on short wave radio listening including reviews of many popular radios. It will also help you get the most out of any radio that you do get.

RACAL RF Amplifier

This is the RF amplifier from a RACAL 6217E receiver. It will amplify HF signals from 500 kHz to 30mHz. It is powered by -16 VDC, and has an RF in connection and an RF out connection. There is also a connection for AGC, if AGC control of the RF amplifier is desired. It was working fine when it was removed from the radio. I do not have a schematic, but I do have a description of the circuit from the "Theory of Operation" section of the manual and a block diagram of the receiver showing how this RF amplifier was wired into the circuit. The connections are also marked on the circuit board.

Source record: 92157

Does anybody considered to pick-up from the circuit an analog signal
proportional to the SWR in order to drive an analog meter?
Such modification would dramatically enhance the reading offering
frequency and SWR simoultaneous readings like in an MFJ-259.

Thanks, Anselmo IZ3BGJ

Dad, W9EHS, recently passed away and knew Jim. I'd like to talk with
Jim to see what he knew about the keyer Dad used in the 40's. None of the
obvious avenues yielded Jims address or phone.
Only loosely related - anyone familiar with the
Woodruff/Halligan/Ricks story in the 60's. I have some letters and am
simply curious to hear any other angles of the story.

If you have a _solid_ lead for Jim, please email. I'll be glad to
honor Jim's request for privacy if he wishes, but would at least like to
know definitively if he would care to talk.

73, Steve Noskowicz K9DCI@arrl.net

The QRZ email address is stale
QRZ says he lives in Seattle. No phone listing there.
There is no phone listing in Cobden.
The ARRL database doesn't have any info, per the Central ARRL mgr.
The Central ARRL mgr says he saw Jim at last Dayton.
His highshool friend, W9PPH, hase not kept in touch.
Others have said they heard Jim on 7040 up until a few years ago.
I haven't yet tried calling all the Ricks that turn up from a web search
and am hoping to avoid it.

--
I know everything, except how to be humble...a.a..and... how to stop
e-spam. Sorry 'bout the address munge, but it has reduced much now.
Use snoskow1 at server email here in mot in the com domain.

5045. Help...Interference in Mini-van

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-10 00:00:00 UTC
From: David <bison@homemail.com>
Message-ID: <3851C3E7.81214FF8@homemail.com>
Source record: 92171

I have a Yaesu FT-8500 installed in my 1997 Dodge Grand Caravan. I also have an AC/DC 9-inch TV/VCR combo. I get slight distortion on the screen and loud interference on the TV's sound when I transmit on 2-meters. (Have not checked 70cm, I rarely use it.) It is much more pronounced at high power. The TV is running off the 20 amp DC power outlet. I run the 8500 off either the second power outlet (same circuit as the TV) or directly from the battery. Both configurations seem to have the same interference. I use a mag mount antenna on the center of the roof for an antenna. The TV is located between the front captains' chairs, and the main unit of the 8500 has been installed in front or the back (remote head) with similar results.

Has anyone fixed a similar problem? Or does anyone have any suggestions about how I can let my back seat passengers watch the TV in peace while I keep transmitting up in front?

Thanks for any advice....

David

Greetings all. The transmit on my Standard C5900DA triple band mobile is going out. The rig no longer transmits the spec watt output on high power or the three low power levels with the radio being less than a year old. I am well aware of the fact that Standard is out of the ham radio business so there is no use trying to contact them. Does anybody know who or what firm is doing Standard radio repair? I have heard there is firm in Utah that does the warantee repair work from one source and from another about a fellow in Michigan who handles repairs. Any help would be greatly appreciated!

5049. Problems with the Kenwood DRU-3 and the TS870

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-10 00:00:00 UTC
From: Jim <n5jim@arrl.net>
Message-ID: <3851E17A.F5A97EDE@arrl.net>
Source record: 92175
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I installed the DRU-3 in my TS870 as per
directions in the manual. After installing it, I
was told that my signal was about 15 khz wide. I
took the DRU-3 out, and my signal was back to
normal at about 6 khz wide.
Has anyone else encountered this problem with the
DRU-3 in the TS870 or any other Kenwood radio that
the DRU-3 will go in ?
Any information will be greatly appreciated.

Actually, the best HT money can buy is the rat shack HTX-202. It's
basically an Icom IC-02AT missing a couple of features.
What makes it the best is the lack of broadband RX, giving it better
dynamic range and selectivity/intermod than anything else out there.

Other thing is you can drop a bomb on it, or throw it out the car
window against a brick wall and it won't hurt it.

5057. Re: How useful is IC-756 Spectrum Scope

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-10 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19991209200836.08568.00000246@ng-fh1.aol.com>
Source record: 92330

Good question....is the BandScope a
usable item? Yes and no...

Yes: On 10-meters you can see the
band "open" in the morning. Signals
start to appear on the scope and you can
quickly tune to them to hear them.
While in the "dual-watch" function on
receive, you can slide the cursor over
to another signal on a predetermined
freq to see who is there or to find an
open spot to QSY. Also, if one were
to eavesdrop on the 49MHz cordless
telephone-band...one can qucikly pinpoint
where the neighbors are while watching
the screen.

NO: The bandscope doesn't really
show the weak signals....a signal must
be about S-4 or better to show up as a
blip. Also, for general rag-chewing and
such the scope is usually just a toy....
it will show you that the other guy is
talking, serves no real purpose.

Danger: The BandScope can become
addictive. I am so used to seing a
pulsating blip moving on the front of
my radio when receiving and just tuning
around. I find myself staring at the front
of my other radio's (that don't have the
scope) with a dopey blank stare. I also
now have a problem talking face-to-face
with people in conversation. I am always
waiting for a blue sguiggle to appear in
the middle of their forehead when they
are talking.

So much for my observations....have fun.

HEATHKIT VF-1 VFO, 160 to 10mtrs + 11 meters
"Matches the DX-20 thru DX-40"!

This is a Heathkit VF-1 Vfo which covers the 160 thru 10 meter amateur bands, plus 11 meters. The Cabinet is in Very good condition with some minor blems on the front panel. The Frequency dial inside, is partially missing at the very top but still useable(readable). It has the octal plug on the end of the connecting cable plus there is a FT-243 style plug on the end of the VFO output cable for easy hook-up to your rig. This Vfo will match all the heathkit dx-20 to the dx-40 but will work with others using the same voltages. This unit is being sold untested because I do not have any transmitter to test it with. High Bidder must contact the seller within three-(3) Days of the auction ending. Items sold to USA and our Neighbors up in Canada, no international shipping!!! Payment to be in US Postal Money Order. Most items shipped by US Priority Mail.
Payment to be received within 10 days of the auction ending.

LAFAYETTE TE-18 Grid Dip Oscillator
"A very Rare and Futuristic looking item"!

This is a very rare and hard to find Lafayette item. It's the TE-18 Grid Dip Oscillator which is Complete with it's little box of 8 coils and original manual. The Manual is dated 1962 and is perfect. The unit runs off 110vac and covers from .36 to 220mhz in 8 ranges. It can be used as a GDO, a Relative field strength meter, and a signal generator. It also has a provision for an earphone. The controls are: ON/OFF, DIODE/OSC., Sensitivity, and Tuning. The Condition of the unit is WORKING and almost mint and Very Collectable.
High Bidder must contact the seller within three-(3) Days of the auction ending. Items sold to USA and our Neighbors up in Canada, no international shipping!!! Payment to be in US Postal Money Order. Most items shipped by US Priority Mail.
Payment to be received within 10 days of the auction ending.

One thing I find the scope useful for is seeing activity in the vicinty of your current frequency when you are using very tight filters. You can crank the filters all the way down so that the QRM doesn't bother you, but you can still see it on the scope.

Source record: 92179

I am cureous if the Icom IC-706 mk II G radio has sepatarate finals for 145 mhz and another set for 440 mhz. QST said the Yaesu FT-100 used the SAME FINALS on both 145 mhz and 440 mhz to save space. I think this is why it uses so much current on 2 mtrs and 440 mhz. Anyone know the answer ??
thanks in advance, TIM

5071. Adjusting power while transmitting harmful to rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-11 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991210210104.12338.00000454@ng-fe1.aol.com>
Source record: 92180

Hello,

I was told once that adjusting the power output on my ICOM 706MKII while transmitting was not good for the rig... Say if you are transmitting at 100 watts and while transmitting turn the dial slowly, decreasing power to see how this effects your signal. Must you speak, decrease power, speak, decrease power, speak, decrease power OR can you just continue speaking while cranking down the power to a lower level or even to a high power setting?

Just a weird off the wall question...

Thanks & 73

Jason

When you speak, you are dynamically and continuously varying the
power output of the radio. That's what SSB does. So changing the level
pot while speaking shouldn't be any different than simply speaking
louder or softer.

The RF power output adjustment does exactly the same thing at RF
that the mic gain adjustment does at AF. In both cases, the gain of
an amplifier is changed. Since an SSB transmitter is linear, the end
result is exactly the same too. You also get this same result if you
simply speak louder or softer into the microphone.

The only reason you might not want to adjust either pot while transmitting
is that the pot may be dirty. That would cause noise which could spike
up to very high levels. You've probably heard this dirty pot syndrome
with a volume control on an old radio. This very high intensity spike
could overdrive the RF PA, even damage it. That's because the RF
PA is run much closer to its limits than is normally the case with an
audio amplifier. What may merely be an annoying scratchie noise
in a stereo could be a PA junction puncturing spike in the RF amp.

However, if the pot is in good condition, there's no real reason why
you can't adjust it while transmitting.

You are seeing what I mentioned a few weeks ago about this. You need
lots of on air practice to get used to varying speeds and different
fists. I guess the tapes can help, but overall I think on air practice
is best if the person really wants to use cw after getting a ticket. I
think the farnsworth method can be handy for passing a test in a quick
time, but you need alot of on air practice to "drill" it into your
brain. From what you mention, I take it you don't have a whole of of
hours on the air. So really just haven't had quite enough practice to
comfortably handle over 20 wpm. It will come in time. Pretty fast too,
if you operate alot. For the time spent , you seem to be doing pretty
good. Many never get the 20 wpm. Of course, it's my theory most all of
them just don't practice enough...:) MK

> Can anyone shed some light on the above for me please?

A car battery will work fine, and you can talk quite a while. If you start getting long winded, just plug the charger in. I used car batteries for my IC-730 for years with no problems. I've since gone to a deep cycle marine battery. "About 4 years old" and still kicking. The only deal with the car batteries, is you can't discharge them too far, and you don't want to overcharge. Let the charger get down to it's normal " full charge" current level, and cut it off. When the voltage drops a bit, plug it back in a while. Of course, you could get a auto cutoff charger. And I agree with others , you do have to be careful with the acid and fumes, but I've never had any trouble indoors with them. Charging at a fairly low rate will reduce fumes etc. It's the fast charging and heat that get those fumes going. I use only a 3 amp charger, and it's never been a problem. And the 3 amp charger covers the 730 just fine. After all, your duty cycle is low, and you generally listen more than talk. Or usually anyway... MK

I have the same problem with my TS-440S internal antenna tuner.
I had it "fixed" once, but that only lasted for a few weeks.

It doesn't matter what antenna or band, the motors just keep grinding
away, and the best match is around 2:1 or 3:1

I hope someone out there has some ideas for us.

Put in a VCR player. Your not going to get high RF interference out of a
cheap TV in the same location.

Car batteries are great!! Deep cycle marine bats are even greater!!! If used in doors go get a plastic box for it. You can find them any where bats are sold. To avoid fumes get some baking soda. Put the soda in a couple of old socks (clean of course), and place in plastic box with battery. The reason we hams use deep cycle is two fold. 1. Battery power is easier on the ham gear than electric power. Especially when pwr failures happen. Also each time the unit is turned on the 'electric jolt' to the circuits are 'chipping' away at the life of the unit. 2. It is the "ham thing to do". Operating with commercial power.

Source record: 92209

Hi! Well....I am one of those "crazies" that just plain love the "Music Mode"...probably because I learned it when I was 12/13. You learn things like code very fast when you are young.

I operate CW, virtually every day, and agree that MOST CW rag chewing or DX work is in a "ear read" speed range beyond the learner...typically 25 to 30 wpm.

My suggestion is to use tape, computer...whatever...to LEARN the sound of the code...then switch to W1AW...that code is in ranges from quite slow...I think they go down below 10....but I'm not sure. When I got my Extra I had to be able to solid copy a full minute, then send it. I was easily reading much faster "ear copy", but I had to hone up on W1AW to PUT IT ON PAPER. Different skll completely!

I suspect that another factor in getting "good" at Morse is LIKING it. My heart goes out to new hams, especially Older ones, that are trying to get better at Morse, while not planning to use it, and quite probably, somewhat ticked off at even having to mess with it. Not quite a good learning set up. Hope this helps...good intentions. 73 "DM"

Ok. The prices in # are the same : for example a Icom 706 Mk II G is 1200 pounds and is about the same here. The British page has a Icom 756 for 1900 pounds and a Ic-756 PRO for 2300 pounds.
FOrget about the exchange rate. IT appears the ###'s are the same for the radios. If a radio costs 1200 pounds there it goes for $1200 dollars here.

Salut Sylvain,

I've had one for about a year now, infact I picked it up on the newsgroup here. I find it to be quite a good radio. It doesn't have a ton of features, but it has enough for what I do. transmit and receive audio are both very good. I find the backlit display to be very easy to read. The display is on the small side though, but I haven't found this to be a problem. Of course size is one thing I love about this radio! It's a very compact size, not a micro-sized HT, but it's on the small side. Battery life is also very good on it. I get quite a bit of receive and transmit out of the standard PB-32 batteries.

About the only things it doesn't have are a ctcss decoder and AM air receive. All in all, it's a nice, simple HT. A good price for one used would be around $100 US.

Hope the info helps.

There's nothing to "defer" over!

Your rig either DOES, or does NOT have the flaw - it's not a debate or opinion - just a FACT that some do, some don't... SO FAR, *I* have had the fortune (?) to be involved with 3 that DO have the flaw...

If yours DOES NOT, consider yourself fortunate - I have so far encountered several that apparently are NOT affected - but that doesn't change the fact that some ARE! I can only hope that at some point, the REASON for those that are affected will be discovered, and a method of correction made available - THAT was my primary reason for posting, not to argue over it.

I am very close to buying an ICOM PCR -1000.

I am very intrested in hearing your comments, both positive and negative!

-Is it a good radio?
-is it comparable to table top radios?
-ease of use?
-etc...

Please post post on this newsgroup or e-mail me.

Thanks in advance - Elijam1@aol.com

5112. FOR SALE: Kenwood TR-751A 2 meter all-mode transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-11 00:00:00 UTC
From: Walter Wilson <wewilsonREMOVETOREPLY@knology.net>
Message-ID: <s55fdnrf5313@corp.supernews.com>
Source record: 92221
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

2 meter all-mode transmitter with 25 watts power on USB, LSB, CW, and FM modes. GAs-FET preamp for less than 0.13 uV sensitivity (10dB S+N/N) on SSB and CW and less than 0.2 uV sensitivity on FM. Dual VFOs and 10 memories. Programable band scan / memory scan. Includes an all-mode squelch circuit, noise blanker, RIT (receiver incremental tuning), and semi break-in with sidetone for CW mode.

This radio is in excellent condition. Full power output and all controls work as new. Squelch potentiometer was recently replaced to bring this radio back up to 100% electrically. Excellent condition on front panel and chassis. The UP button on the hand mic was lost and has been replaced with a similar unit (see picture) and one of the bottom rubber feet has been replaced with a stick-on substitute.

Includes radio, hand mic, PTT connector (for amplifier), mobile mount, original manual, and original shipping carton. $475 shipped insured via Priority Mail to your location in the continental US. Picture available by email or at http://www.knology.net/~wewilson/ebay/TR751A.jpg

I'm going to buy an HF amplifier and can't make up my mind which one to get.
The radio I'm using as an exciter is an IC-765.

I can afford these amplifiers:

Drake L4-B
Heath SB221 or SB220
Kenwood TL-221

Do you have any suggestions which one would be the best? Or any suggestions at
all. Thanks.

Hi all, have the following for trade:

Motorola GP68 handheld radio. 20ch. 4watt, UHF 430-470MHz.
includes rapid charger, hi-cap battery and aftermarket antenna. datecode is
6/99 so radio and all is only 6 months old! looks new. program instructions
included.

Polaris PA-II Radio Interface Box. Built-in NiCad holds charge for weeks!
includes rib to computer cable, wall charger, and MAXTRAC, etc. programming
cable, new aftermarket cable. RIB is a few yrs. old, works great!

I'm looking for a repeater in the UHF band. 462MHz to be exact. any
interest? Part trade plus cash? Let me know what you have and maybe we can
make a deal. I've got other items of interest as well. I can pick up in the
KY/WV/TN border areas.

Not interested in splitting up or selling either item just yet.
thanks,
Randy

5134. HQ-180 Comments Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-11 00:00:00 UTC
From: Cliff Kotchka <cliffkot@interaccess.com>
Message-ID: <s567i78m53120@corp.supernews.com>
Source record: 92243

I have a Hammarlund HQ-180AC which I've used for many years, but which seems to lack audio fidelity and is difficult to properly tune on AM. The IF has been aligned twice with disappointing results each time. I noticed that the manual shows that the bandpass has a double hump, indicating overcoupled if transformers. So i'm beginning to think that the problem is endemic with the design.

I worked out the bandwidth/Q numbers and came to the conclusion that a 60 kc. IF is quite a bit low for optimum AM reception.

Comments from owners would be appreciated. \

Can anybody refer me to a repair shop in the Lynchburg - Charlottesville, VA area? MY XYL and I want to get my father-in-law's old Yaesu FT-101B repaired for XMAS on the sly and we need to secret it off to as local a shop as possible. We're trying to avoid having to ship it anywhere.

I'm not surprised if people get confused if you say 'lema'. I thought
that the correct phonetic was 'lima' (as in Lima, capital of Peru). As
they say in the NE of England, "Yuh hev tuh laarn hoo tuh taak propper"!

Kenwood is a pathetic amplifier, it has so many little faults. The biggest being the poor power supply regulation. The L4b with new tubes and a beefed up transformer would be my choice, it is rock solid. The SB220 would be my second choice, once all the upgrades have been made to it. Out of all these amps to mod, the L4b would be the easiest, it just has so much room to work with, the external supply is a great help.

I would pick up a IC781 and have all the upgrade mods done to it by KK7TV, i would also add all the mods as decribed in QST by Dr Ulrich Rhode, you will have the best receiver and transceiver that exists in Ham radio. No current or proposed transceiver has a 3rd order intercept point as great as the IC781 with all the mods. If you just wanting to buy new rig fine, they all as bad and as good as each other. The Japanese are taking us hams for a great ride with all these rigs, same old performance, and 20 years behind commercial radio specs. What we getting now the mil spec rigs had 20 years ago. At the current rate of ham radio improvement we will have the ultimate rig in 20 years time, then we will be 40 years behind again.

5150. Questions on Kenwood TR-7950

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-12 00:00:00 UTC
From: N-C.BEasley@sil.ORG.pg
Message-ID: <000e01bf4463$7a567240$e828a8c0@silpng>
Source record: 92253

Ref.: Questions on Kenwood TR-7950

Dear SIG Readers and PNG Amateurs,

I am working on a TR-7950 for Al Stucky, one of the hams in our mission. Of course, there is no manual, and being as we are on this side of the world and not real close to any Kenwood dealers, I am a bit stuck and in need of some help.

The owner had some misc. complaints, among them a loose mic connector, burned out lights for backlighting and the main complaint, transmit/receive that is sometimes there and sometimes not. The mic connector is not a problem now, but I need some help with the lights and the transmit/receive that is sometimes there, sometimes not.

A) Could someone with a manual or knowledge of this model radio help me with some part numbers &/or cost for same?:

1) There are 2 green, "grain of wheat" type bulbs on the "S-Meter" board, p/n: X54-1700-10, between the 3 rectangle LEDs for the REV/C.TUNING/PRIO indicators.

2) Another green, "grain of wheat" type bulb mounted behind the front panel chassis, that illuminates the Memory Selector knob ring on the front panel.

3) A clear, "grain of wheat" type bulb on the "S-Meter" board, p/n: X54-1700-10, behind the DTMF keypad for backlighting.

Is it possible to replace the "grain of wheat" type bulbs in these applications with a (physically small) LED? Would this be a good option to try? If so, could someone confirm that the voltage on the tracks for these bulbs is 12 volts?

B) Could someone with knowledge of this radio advise me on the transmit/receive that is sometimes there/sometimes not? I have not been able to duplicate this problem. Connected to Power supply and antennas in my shack, the radio transmits and receives fine (i.e.: as I would expect it to). As the owner is "out bush" I would like to be a little more confident that the problem is fully solved, not just "it works for me...".

Any and all help would be appreciated.

Seasons Greetings and 73 to all,

Norm Beasley, P29NB/KO4CB

>Comments from owners would be appreciated. \

Comment from a former owner. These were communications recievers,
not hi-fi sets. They weren't intended to have a bandpass flat to 10 kHz.
That said, the fact that the receiver has been realigned (twice!) is probably
the bulk of the problem. Realignment is almost never necessary, and it
is difficult to do properly.

yus, now I feel a pratt, (for an old man that's rare), Ta.

Perhaps I should have used the double 'e' < Lee'ma >

The phonetic spelling in the Dictionary is actually Le'ma
(the 'e' has a bar over the top, as in bar BQ)

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

NiMH batteries blow away Nicads. Get the NiMH batteries. NiMH's
loose about 1% a day just sitting around. However they out preform
even regular alkalines in high power applications. Most people with
digital cameras for instance use NiMHs.

73,

Tom

Thanks for the reply. I read some information on the web that the shelf life for NiMH was inferior to NiCADS but apparently this is not what you have found. Sounds like the NiMH are the way to go now.

Tom@astro.net wrote:

> NiMH batteries blow away Nicads.

NiMH cells - when properly cared for - will only provide 50%-60% of the total discharge/charge cycles as do modern NiCad cells. Which means you need to treat them properly for best life expectancy.

NiMH cells require a different charging algorithm than do NiCads. Sure, you can charge NiMH cells in a charger intended for NiCads...but you will NOT get the most out of your cells.

My favorite charger for packs from 4.8V to 12V is the Maha MC-C777a Universal Conditioner/Charger. It automatically treats both NiCads and NiMH cells properly - and comes with a temperature sensor, which is extrememy important when charging NiMH cells/packs.

So...when properly cared for, you will definitely enjoy your NiMH packs. Just know that they are not going to live as long as modern NiCad equivalents.

Radio Amateur Callbooks For Sale:

1988 North American $ 10

1991 North American $ 10

The above are "like new," They have been opened up, but that is
about it.

1990 North American $ 5

1990 International $ 5

1990 Supplement (includes both US and DX) $ 2

1992 North American $ 5

1992 International $ 5

1993 International $ 5

These have been used. They show slight use, but are in good shape.

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

I had the same question a few months ago and here are a couple of responses I received.

The Kenwood web site has PC control software for the TS570S, but I understand it will work with older Kenwood rigs.
There are also a lot of rig control shareware programs at the QRZ! web siteor on their CD-ROM.

I would like to buy a hard drive for a Gateway 2100 Solo Laptop. The original was a 1.4gb.

Thanks Greg

5177. Yeasu ATAS-100 Info/antenna needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-12 00:00:00 UTC
From: wr2m@aol.com
Message-ID: <19991212172150.28247.00000817@ng-cg1.aol.com>
Source record: 92280

I just ordered an FT-100 , how does this ATAS-100 work? Does it tune a 108" whip like the old icoms used to do ? Or does it automatically tap a loading coil through a motor?

Has anyone ever compared its preformance aganist a mono band mobile antennalike a Hustler or Hamstick ? Or even a miltiband antennas like a bugcatcher,outbacker or screwdriver antenna. I am considering either looking into a used one if anyone has one.
Thanks,
Bill WR2M

5184. Help needed, how does Syntor XX9000 get programmed?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-12 00:00:00 UTC
From: dave@ccnn.net
Message-ID: <385440F6.5C00@ccnn.net>
Source record: 92287

have a syntor x9000, no control head or cables (yet).
How does one pgm this radio? Do I need cntrl head hooked up?
I've been to batlabs, and see the cable specs, but where
does that hook up? (as you can see, I'm new to xx9000 rigs).

This is the "x" model (secure capable). Where does the secure
option go? I don't think it's there, but capable. Where would
I look for the secure board?

Thanks,
DV

Do you have a really nice dynamic mic that you would like to use with your ICOM (amplified electret) rig? No problem!!!

Just send me a note and I'll send you my simple (1 transistor & no power supply needed) interface schematic. FREE! No more soprano ICOM voice. You'll have those deep masculine tones back in no time.

Regards,

Roy

5197. Re: Help needed, how does Syntor XX9000 get programmed?

So, where does the programming cable fit?
I understand the control head to drawer cable. Is there
a special "25 pin" connector for the rib to plug into?

RADIO ===== O ====== CTRL-HEAD
^
|
|
RIB?

In other words, do I need special radio/head cable
in order to program? (I understand keyload port on
radio/head cable). Just looking to where the secure
board fits into drawer unit, to see if it's 1) there,
2)or available to be put there....

THNX!

Hello All:

I still have some items to go:

ALINCO DX-70TH, HF/6M, Transceiver, near new condition. Comes with EDS-4 (remote cable kit). Radio does have the MARS/CAP modification due to MARS affiliation.
Also have the MFJ-1272BYH TNC adapter for it. $600.00.

ICOM IC-2710H *SOLD*

DENTRON DTR-1200L, HF amplifier, very good condition. Amplifier covers 80, 40, 20 , 15, and 10 meters. Unit has two very new Svetlana 572B tubes (one year old, little use). Full output on all bands (~700W). $400.00.

JPS ANC-4 *SOLD*

KENWOOD AT-230 *SOLD*

If you are interested in any or all items, please, e-mail me directly:
n3yyp@arrl.net

Cheers,

Cliff Owen

5203. Fix to Kenwood TM-V7A microphone problem?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-13 00:00:00 UTC
From: Clark N7TDT <N7TDT@arrl.net>
Message-ID: <834banjbr1@news.xmission.com>
Source record: 92057

I am in a family with 8 hams. We have 5 Kenwood TM-V7A radios in use among our family. They've been great radios EXCEPT for the following problem which we've experienced on 4 of the units:

PROBLEM:
Due to a poorly designed microphone spring or switch, we've found that the microphone PTT often "slips" out of the transmit position while we're talking without the operator realizing it. One must apply an abnormal amount of pressure to get the PTT to stay down while talking. It is almost imperceptible when the PTT unintentionally releases.

Is anyone aware of a "fix" to this problem? My hope is that Kenwood offers some sort of a fix. There must be a lot of Hams out there experiencing this problem because we've had it consistently on 4 of 5 units.

Thanks,
Clark N7TDT
N7TDT@arrl.net

I have an excellent condition SWR-121HF graphical antenna analyst. This
is the best way to see what your HF antenna system is doing.
The SWR-121HF features:
.Graphical display of SWR versus frequency from 1MHz to 31.999MHz.
.Compact battery powered for portability.
.Automatic SWR scaling for best results.
.Digital readout of SWR-at center frequency and top of plot.
.Display of return loss in dB.
.Keypad selection of center frequency and frequency increments.
.Auto battery-saver functions.
.Automatic centering of SWR null.
.RS-232 interface allows remote control, remote display, and saving
of plots (optional PC software available).
.Internal beeper provides audible indication of SWR.
.Self-test and calibration functions.
It includes the manual and a case. In excellent condition. $295 shipped.
73 Chris VE3NGW/W4 Florida

A very clean Kenwood TS-820S with copy of owner's manual for sale, $325 plus shipping from the Los Angeles area.

This was top of the line rig, one of Kenwood's most popular riges ever. Covers 160-80-40-20-15-10 meters plus WWV receive. Passband tuning, speech processor, crystal calibrator, digital readout, and more features. Over 100 Watts output on all bands.

I can get a copy of the service manual for a few bucks more. Probably won't need it; it's a solid, stable, reliable rig. SSB, CW, FSK.

73, Bob K6DDX

Bob, here is something else to think about. If he needs to use lets say a transverter it could very well be required to TX outside of the legal limits of one Ham band INTO the transverter only to cover the LEGAL range on another Ham band.

Not sure that would be legal as you will still radiate in the
frequency which the transceiver was not Type Accepted for.
Even Dummy Loads radiate so coaxial jumpers into a transverter would
be no different.

The Interesting question is can one legally modify an amateur
transceiver to transmit outside the bona fide amateur radio
frequencies for use with a transverter that requires an IF that falls
outside of the legal amateur radio frequencies ?

I would guess you can not legally do that.

Hi Pete,

I think it is fantastic. I used to use a Heathkit spectrum scanner and was very upset when I could not hook it up to a modern rice box. Even wrote to several manufacturers requesting help. Was told I would void my warranty. Any way, I like it because you can scan from 5 khz to 100 khz. Just great. You use it to locate active stations and especially to locate clear areas (without qsy-ing) to go to call CQ or move somebody off freq to continue QSO. And unlike the spectrum scanner on the ICOM 706, you can scan and listen to the receiver at the same time. When the 706 scans, the radio shuts down, BUMMER.

Go to nearest dealer, do not delay, and ask for a demo. I bought mine the same day.

73,

Bill

Sounds like you should head over to the website and help out on
the history side of things. Yep according to you I'm a newcomer
but at the same time I'm an old-timer to all of the people who
are new members. The club has been moved 4 times since I was
first a member back in 1988, nothing is the same. So therefore
I too carry memories that are now just part of the club's long
history.

Hi! Looking for a good used UHF repeater
and duplexer for amateur band: 448MHz out,
443Mhz in. Need about 25W continuous, would
like both ac and dc operation. Looking for model
designed for repeater use--not a kludge.

Please email Dave W1DAY: d-day@ultra.net

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

>
> 'Barbecue', surely?

Actually "Barbecue" doesn't have a bar over the top,
but every Ham Shack should.

The convention of putting a Bar over the BQ is an evolution of the practice
of branding irons used on the cattle ranches of America.

Snippet from Bookshelf (c) MS
1853, Texas cattleman Samuel A. Maverick, 50, receives an anonymous note
telling him to look after his strays on the Matagorda Peninsula or risk
losing them. Maverick accepted 400 head of cattle in payment of a debt in
1845 and has never bothered to brand the animals on his 385,000-acre ranch,
but he sends down a party of cowhands who round up about the same number
that were turned loose on the peninsula 6 years ago, sells the cattle to
Toutant Beauregard of New Orleans, and retires from ranching. The word
"maverick" will become a generic name for unbranded cattle and for political
or intellectual independents who do not go along with their associates.

PLEASE do not respond to this newsgroup or email address, instead respond to rolandman1REMOVE@aol.com but be sure to remove the word "REMOVE" first. :)

Need cash for the holidays? I'm an electronic musician looking for:

old synthesizers
keyboards
drum machines
effects processors
sequencers
vocoders
old modular patchable and analog synths.

Will consider anything by MOOG, ARP, Roland, Korg, Sequential Circuits, Oberheim, EMS, EML, PPG, Synton, Serge, Buchla, Polyfusion, Aries, Paia, Voyetra, Mutron, Bode or others. BROKEN OK. Will even consider parts units. I am most interested in older and more unusual items, particularly those which sound unique.

Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
TR-909 Rhythm Composer
TR-808 Rhythm Composer
RSS Roland Studio System
E-mu SP-1200 sampling beatbox
Performer by Ionic Industries
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
etc

Please visit http://members.aol.com/rolandman1/index2.html for a better idea of what I am into.

If you have anything or know someone who might, please respond to rolandman1REMOVE@aol.com but be sure to remove the word "REMOVE" first. Thanks in advance and happy holidays!

Sent via Deja.com http://www.deja.com/

I would like to install an IC-706MKIIG rig in the van which draws at most 20 amps at full transmit power. I have cable to use, but I don't know if there is a hole already in the firewall I can use or if I need to drill one out. Does anyone know if and where the rubber plug is located in a loaded 96 Dodge Grand Caravan? Also what is the best way/location for the hole to install a power connection to the battery if there is no plug in the firewall?

Thanks to several who found my goof:

The S 303 was a solid state rcvr. This LMO is tube type. It will work in the SB 401 and possibly in the SB 300 or 301 which were tube type rcvrs. It will definitely work in the SB 401 transmitter.

D.E. Day, I have a GE Master II mobile that has been put in an E case
and has the duplexers, tone board, and Voice Controller all built
inside the case. You can carry it around if you need to. It is
operating on 444.00/449.700 at this time in Little Rock, AR. It puts
out 45 watts or you can turn t down to 5 watts. It has 4 voice message
capability in duplex or can be used as a Simplex Repeater. It has
cellwave duplexers and an NHRC-3/M2 Repeater controller.
It is supposed to be sold but if I do not receive the Money Order for
it this week, they you could buy it if it meets your specifications.
$ 695.00 Plus Shipping. Plug and Play , Ready to go.

The cable plugs between the control head cable and the radio drawer unit. The radio stores the frequency info while the head stores the channel data (alpha tags). Can't remember where the secure board mounts but you program the code through a hirose connector located at the radio end of the control cable. I've been told not all cables have this connector but mine does...

We have for sale 2 ea. Kenwood TS-870 Transceivers. These units are about 6 month old and in new condition, including original packaging and manual. We have used these radios in our engineering department as testing platforms for our own receiver products.

Price: $1795.00/ea. Includes Federal Express 2Day shipping

We take VISA/MasterCard or American Express

If interested, please contact

Source record: 92137

I don't think the DJ-582 was ever very popular. Its look-alike
predecessor, the DJ-580, was far
more popular because it could tune the 800-900mhz bands unblocked. I've
owned a 582 for over
three years. It has good loud audio that I can hear in a car without
using a speaker mike, and that's
the only reason I keep it. Only 20 memories per band is a drawback. Don't
know what its worth, probably less than what I'd want for it. If I were
you, I'd look at the new generation of "one band at a time" dualbanders,
such as the Yaesu FT-50 or Icom T7H.

A great place to look for the current prices of used ham gear is :

http://www.aade.com/hampedia/prices2.htm

They summarize the max, low and average prices for used ham gear sold at EBAY.

Unfortunately, they do not have any prices for AEA and Kantronics TNCs! -- Too bad.

But go to EBAY and do a search- you may find some recent completed transactions with prices for PK900

Are you selling your PK-900??

Source record: 92139

Rich, I had a similar problem several times with my 757. What had happened was when I was moving my radio around, I had inadvertently pushed in the TUNER button. So, when I turned on the radio it ws in the transmit mode and, "I FREAKED" and quickly shut it off. Then doing this again and again, without turning off the TUNER first, netted me the same result.
I hope this is all that is wrong. I was embarrassed as hell, after I thought about it. 73 de Dave/N2JBO

For Sale: Bianchi Leather Swivel Radio Case - NEW!!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=220108952

Only 2 months old!
Leather w/swivel attachment
Designed to fit any medium to large radio. Was used previously with a Motorola Saber but can be used by any Vertex, Maxon, GE, etc. portable radio, and it has a stretching strap to accomodate just about any radio
No scratches or other cosmetic defects

This unit is in excellent shape (10 out of 10 cosmetically). I bought it only 2 months ago and have only used it once! Selling because I no longer need it (have a different radio now). Please email with any questions. Good luck, and thanks for looking!

Hello,
I'm building a repeater and am interested in a set of duplexers that will work 50W on the 145 portion of the 2m band.

I'm looking at a 2 antenna arrangement with vertical separation, but can also do a single antenna setup.

Thanks,
Joe

220 is such a fun band. I don't know if it's the chicken or the egg that
did it! (cost of radios, or, lack of use!)
In some instances, I think it's better than 2 meter fm.
It's a shame. :(

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

I hadn't thought about the transverter, although if it's a 706mkIIG,
it already covers 6, 2 and 440.

If so, then use of an IF which doesn't fall into an amateur band
in a transmitter is also illegal. Thus all late model Icom radios
are illegal. But of course that's not true. You can use any frequency
you like in a *closed* system as long as incidental radiation meets
Part 15 limits. That's true in the transceiver and transverter case
as well since they are functionally the same thing.

i also had that embarassing situation of turning it on while the button on
the uuper left was depressed. it started up in transmit. i can't remember
the name of the switch . MOX or something..... yep thats it. I just went
and looked at the rig. Of course I once had a more serious problem with a
ground loop that was caused somehow by the keyer connection plug and all the
wires looping around the rig. It locked up and burned both finals. yaesu
fixed it, and upgraded it with a lot of new fixes. but let's hope it's
that mov switch. wn5i

Hi all..... I'm looking for the internal antenna tuner for my Kenwood TS-930S. If anyone has one for sale, or knows of one for sale, I would appreciate hearing from you. While I would appreciate one in working condition, I will consider non-working if it is repairable. I've never seen one of these for sale outside the radio, so any help would be appreciated. Thanks!

5286. Re: Radio Shack HTX 10/Magnum 257 Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-14 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38569EB2.84068823@yahoo.com>
Source record: 91969

The magnum 257 is not the same radio as the HTX-100. Nor is it the same as the HTX-10. The Magnum 257 uses an entirely different custom PLL -- Yes, the two radios look the same physically, but the PLL /divider IC is different. Both use custom ASIC chips based on a Sanyo/Seong Yong 72322 ic -- it is mask programmed (ie, programmed when the dies are manufactured). The Magnum offers PLL pin modification for MARS. The RS HTX-10 does not.

On the Magnum, there are jumpers 52,53,54 are the pins for modification. I believe it's pin 52 & 53 are open. Pin 54 is jumpered closed. CPU reset and you are in business for transverter or (ahem...illegal) operation. Not responsible if you blow up your radio or go to jail for being a freeband cb'er. Mileage may vary. Tax title and license not included.

> it already covers 6, 2 and 440.

Down East Microwave (http://www.downeastmicrowave.com/) makes a nice
selection of transverters. For example their 1.25m transverter requires a
10m IF. To use the full 1.25m band you need a range of 3MHz (222 to 228 MHz)
and the 10m band is only 1.7MHz wide. So to use the full 1.25m band you need
to transmit out of band on 10m. As you may know the IC-706 series does not
include 1.25m, 33cm or above.

I have a complete Johnson RF Amplifier less the two 4-400s. This would make a great spare, or can be matched up to a PS and be a nice heavy duty HF Amp or it can be a start to collecting the parts to put together your Desktop KW. It uses a very large Roller and a very large variable. There are no modifications and condition is good. It has some blemishes in the paint that might clean out or it can be re-silked This was taken out of a working desktop that was parted out. JPGs available on request. Only $400 shipped. 73 Chris VE3NGW/W4 Florida

Source record: 91988

Hi John,
Are you familiar with transverters? Ten Tec made a nice line
of 6 meter (50-54 Mhz), 2 meter (144-148 mhz) transverters utilizing
26-30 Mhz as the IF frequency. I have a 1296 Mhz transverter that
uses
20-30 Mhz as the IF. These 10 meter type rigs make excellent
portable/dedicated rigs to use with transverters. Relatively good
selectivity and very good sensitivity. These are also very portable and
not battery hogs. So, modification for extended receive is highly
desirable. Some folks like to listen to "smokey reports" too.
Listening is not illegal! Plus, it's fun to listen in on the Military
stuff on 26 Mhz in my area.

Welcome to ham radio, the HF bands, and congrats on passing the 5 WPM
code test. Keep at it. Lots of fun.
thanks,
Joe K7JOE (author of the original email)

5315. Help w/ SWR meter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-14 00:00:00 UTC
From: David Adams <dadams@intellimark-mn.com>
Message-ID: <38569B25.DC1E2F6B@intellimark-mn.com>
Source record: 91998

I bought a used SWR meter on ebay. I am hoping to use it to tune a 1/4 wave whip mobile antenna for my Yaesu FT-2400H

Problem: I don't know if this meter is good on VHF. It may have been designed for HF. (No indication on the meter. Just says "SEARS".)

The ARRL book, "Now You're Talking" states that it may work on VHF if it can be fully calibrated in the set position. There is also a test question on this point in the current question pool.

Can someone translate that for me. The meter does have a calibration knob, but what is the "set position" or how do I put my radio in the "set position"? No instructions came with the meter.

5316. VX5 gets hot and battery goes flat

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-14 00:00:00 UTC
From: Sean Nixon <sean.nixon@attglobal.net>
Message-ID: <38555f50_3@news1.prserv.net>
Source record: 92070

Anyone had any problems with their VX5.
I had used mine for a day, charged it up agin and then later found it was getting very hot while on receive and the battery went flat in a short period of time.
Perhaps there was a short circuit, or a problem with the circuitry in the power supply line to the radio.
I took it back, but was wondering if this is a common fault?
My new one seems to be ok.

In my opinion, the best transmit audio and ease of operation as well as 6 Programable memroies for 6 different operating senerios is the TM-733a! I have three of these and will not settle for anything else. I do alot of cross-band reapeating and they are perfect for that! It's one of the few radios that gives you a removable head if you like that. Just like a car radio. If you like the blue display of the TMV-7a It's pretty much the same rig. Goodluck, Scott,n0oba

5324. CW FILTER INFO FOR KENWOOD 570??

This is a 16 channel, 4 watt, scanning handie-talkie that will cover 438-470 MHz. It will do either PL, DPL or carrier squelch on any channel and has a built-in DTMF pad.

Includes heavy-duty spring belt-clip, rapid-rate battery charger and a speaker/mic.

This radio is in very good/clean condition and was used in an office enviroment

I can have your frequencies programmed into this radio prior to shipping.

$ 295.00 shipped

Please reply via e-mail and mention this posting.

Source record: 92087

The company has a poor reputation among my ham friends. I haven't dealt with anyone with the company, but the construction of the products speak for themselves. Cheap coax and connectors plus easily corrodable hardware make for a good, cheap back up or indoor antenna, but they don't last a year in most environments.

Source record: 92090

Hi,
I just recieved my FT-100 today. I did discover that the s meter was off considerably . I did change the " s meter full scale" parameter to 235 and it seemed to help somewhat , but it just does not seem right. Without having a signal generator its difficult to verify. Would anyone happen to have a list of what ALL the parameters in the sub menu should be. I did change a few and misplaced the sheet with the original settings.If I reset the radio will these commands go back to the factory defaults Also output power out is about 80-90 watts up to 40 meters, and drops to about 70-75 on 75 and 160 meters. Is this norma ?
Thanks in advance
Bill,WR2M

From: nexus@datasync.com
Message-ID: <8396lk$tu3$2@news.datasync.com>
Source record: 91893

The only mod I know about is the one at ftp.kenwood.net
and it doesn't mention anything about a mod for 800mhz
it would of been nice, but mine don't do it.. I too
have the extended range done to mine..

Could you point me to an address where this mod you read
is at or can you explain the steps to be taken to make
it go to 800mhz.

It sounds like this is something that only will work on
a Euro version of the radio. Even though he converts it
to a US bandplan it may have had 800mhz in there from the
get-go unlike the us version with no provision for 800mhz.

I wish this wasn't the case :(My th-g71a has 800mhz rec.

5348. FS: Beautiful Hammarlund S-200 Speaker

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-15 00:00:00 UTC
From: Jan Robbins <swanman@cfu.net>
Message-ID: <385869A1.1C9C12C8@cfu.net>
Source record: 91902
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have for sale what is easily the BEST Hammarlund S-200 speaker I have seen since they were new in the late 1950's and early '60's. I am selling it only because I do not need it; my collection is going in another direction.

If you are not familiar with the S-200, it is a perfect match for the Hammarlund HQ-100/110/145/160/170/180 series of receivers. Its cabinet and trim ring (all metal, not plastic) are the same as on those receivers. The front is covered in matching gray cloth with fine, abstract silver line tracings, a design typical of the late 1950's and early '60's.. At lower left of front is the traditional circular Hammarlund "Arrow-H" logo. The speaker measures 11"hx12"wx9"d.

This one you could display in your living room with pride. It is in Collins-scale EXCELLENT+++ condition. Cabinet and trim ring are without serious scrapes or mars--a little buffing will make them look like new. More importantly, the fabric front is not stained, discolored by tobacco (no evidence of that ugly weed), torn or marred in any way. The Hammarlund logo at lower right is in place and nearly perfect. Of course, the speaker works perfectly, and will work with virtually any receiver from the 1950's to today.

I will sell this speaker for $145 firm + shipping, no trades. If you want one for your rig that you can show off and be proud of, this is it. It is sitting next to my R-390A now, and I wouldn't let it go if I didn't have an as-new LS-474--the original matching military speaker for that receiver--to replace it. Let me know if you can use the S-200. Tks es 73!

Have been using my HTX-10 as a mobil with a mag mount antenn and a
cigarette lighter plug, every day back for a month forth to work. I
have not had any complaints from any one I've talk to in the states,
Hawaii and down under.
I also have a HTX-100 at home which I perfer to my big rig on 10 meters.

Message-ID: <38584F70.638846D6@pacbell.net>
Source record: 91905

When using 2m or 70cm, you don't need to use the extender. When using 6m you do. However, the extender won't harm 2m & 70cm operations. So, I just leave it on all the time. And, I'll break-out the analyzer and let you know what I get....

Okay, here's the results...

w/extender:
53.17 MHz (resonant) 2.8:1 SWRs
149.0 MHz (resonant) 1.5:1 SWRs
525.0 MHz (resonant) 1.7:1 SWRs

without the extender:
46.78 MHz (resonant) too high to measure SWRs
150.9 MHz (resonant) 1.3:1 SWRs
518.4 MHz (resonant) 1.8:1 SWRs

So, like I said, I leave it on all the time and my signal reports on simplex have verified that on is better.

73,
Brent

That's close. The programming interface cable plugs into a RIB at one
end and had a special Socket/Jack on other end that goes between the radio
and the control cable plug to the radio.

Source record: 92003

Hi Fellas;
I have for SALE:
Almost mint TT Omni VI(not +)with matching speaker supply. Included is a
1.8 SSB filter option. This is off the top of my head and can supply actual
Model numbers or S/N's later!
Am assuming this because when I press 1.8, you can hear it narrow down a bit.
Only problem is that there is about a 5-7 watt carrier on LSB only. I am not
a tech and have not even attempted to adjust this as I am sure it can be. I
do not have any paperwork.
Price is $1400+ UPS Conus.
A great deal! I wish I cud keep it myself but the holidays have taken a toll
on my funds!
Thanks es 73....Rich WA2RQY (1961)

Source record: 92005

If you do not care about being Ripped-Off
or Miss-lead, then please disregard. If you
have been a VICTUM, I would suggest you
read on (AND SAVE)
==========
ITS TIME AGAIN...I have being seeing person(s)
being RIPPED-OFF and MISS-LEAD by Scam Artists
time and time again, and thought the following
might be helpfull. PLEASE, this is a "Personal"
point of view and "MAY" or "MAY NOT" reflect the
views of others.

Especially Scam Artists !!
****
1. KNOW WHO YOU ARE DEALING WITH !!!!
****
a) Ask for a Full Name
b) Ask for a Home Address (Note at bottom)
c) Ask for a Home Phone Number
d) Ask for a Work Phone Number
e) Ask for "Any" Special Licenses; Ham Radio,
CET, Radio Telephone, etc.
++++++++++
Notes:

Watch Out For P.O. Boxes, and PLEASE NOT
everyone with a P.O. Box is Untrustworthy
or a Scam Artist. (Even I have a P.O. Box),
and many persons live in Rual Areas.

I have just found that "Sometimes" Scam Artists
like to use them, and use Miss-Leading DOMAIN
Systems as a cover, some even using a Pay Telephone
as a return number.

BE VARY CAUTIOUS about "ANY" Bussiness or DOMAIN
provider that has "ONLY" a P.O. Box. for a return
address, with little or no substance. If it has
been under construction for some period of time,
it may be worth a second look, and even a third.

==========>BEWARE<==========

Some Domain Providers, Bussiness, and Scam Artist
have easily manipulated ISP's and have been known
to Create Fake (or similar) EMail Names and

addresses to "LOOK JUST LIKE THE REAL THING" Some Domain Providers also been known to manipulate "Tag" counters to show they have been hit 1000's perhaps 10's of thousands of time to "LOOK LEGIT"

==========>USE COMMON SENSE<==========

****
2. ASK FOR REFERENCIES !!!!==>AND I MEAN ASK<==
****
a) Ask the Person or business "How Long" they have been trading / swapping / on the NewsGroups.
b) Ask about "ANY CURRENT" or PAST transactions on Internet, and Email Address of the person delt with.
c) Ask if they are a "DEALER" cross check with the Telephone Company in the City the Dealer is in.
==========
NOTES:

EBAY has a "GOOD" way of judging a persons Charactor, and most anyone can check the FEEDBACK profile of persons on EBAY. In General, the Higher number of POSITIVE responses, the more favorable (or honest) the person probably may be.

SACM ARTIST have a VERY DIFFICULT TIME in manipulating the safe gards in Ebay, and these safe gards can add to the price of a item being offered. Some Like Ebay and some don't, but Ebay is a Fact of Life, and will not be going away anytime soon.
==========
****
3. ASK QUESTIONS ABOUT THE EQUIPMENT !
****

a) Ask How Old the Equipment / Material is
b) Is it operational?
c) On a scale from 0-10, 10 being Brand New, How would it be rated.
d) Has it ever been Repaired or Serviced?
e) Does it have the Original Model / Serial Tags?
g) Will the person selling the equipment stand behind the purchase for a short period of time? Especially Helpfull on HIGH END Items.
==========
Notes:

On FREQUENCY SENSITIVE equipment, make sure its in the range you may be interested in. Again use COMMON SENSE!!

Would you spend 1000.00's of your hard earned monies
on a piece of JUNK? I see persons doing that at many
times on old beat up gear all the time. What a Waste!
==========
****
3. NOW TO THE "M O N I E S ". THIS IS A VERY TOUCHY
SUBJECT HERE ON THE NEWSGROUP !!!!
****

a) BEWARE of the $25.00-$50.00 SCAMS. They are Very
Hard to collect on when a deal falls through.
b) BEWARE OF "SENDING MONEY IN ADVANCE"
c) Keep your receipt if you use a Postal Money Order

Notes:

Again this is a VERY TOUCHY subject, and probably
has many points of view. I will give up one of my
secrets. Personally, I do Not Care for COD's. One
really has no guarantee if they perhaps are going
to receive a Box of Bricks, or receive a bad check.

If one uses some simple safe gards, one can "Lock"
in a deal with a seller by offering a Postal Money
order in advance, while someone else is just giving
thought of what to do, a smart buyer has already has
a check on the way.

When a Postal Money Order is sent, it comes under
the guidelines of Postal Fraud if you have been Miss-
lead or Scammed. Altough you may not get your monies
back, rest assured, Postal Inspectors will be looking
into the complaint....Sometimes these Scam Artist get
more than they bargin for. Banks and Local law enforc-
ment have a tough time following up o a complaint.

On the other side of the coin the SELLER can
receive his funds in just a day or two, and BUYER
(if the seller is reputable) SHOULD receive his goods
in just few days.

The whole trade / transaction is completed in just a
few days. Also please note that this is ONLY TRUE
if BOTH parties are responsible persons. Many things
can interupt a transaction.

a) Computer Crash
b) Family Emergency
c) Illness
d) Cheaper price being offered

So again, its pretty important that a transaction be
completed in a timely manor.

I have varified Federal Express does a Super Job on COD's, but they still are a bit expensive. UPS on the other side, well they are still improving, but my experience has showwn they can take weeks to deliver a check to the sender.

SCAM ARTIST "JUST HATE" POSTS LIKE THIS ONE, AND MANY TIMES WILL REPLY WITH A NEGITIVE RESPONSE, BUT SINCE THE NEWSGROUP IS IMPORTANT TO THOUSANDS, MAYBE THEY (THE SCAM ARTIST) WILL JUST GO ELSEWHERE

MAKES GOOD BUSSINESS (AND GOOD SENSE)

HAPPY TRADING

MS

: superb and they sound clean.. Why are you worried about modifing the rig?
: That would be illegal to operate out of band.. and i dont know any mars/caps
: around 10/11meters.
: Joe K7JOE <K7JOE@yahoo.com> wrote in message

That goes to show how much you know.. :) There is infact a Civil Air Patrol
Frequency in the 11 meter band, and no its not a citizen band frequency, its
actually licenced to the USAF for use with CAP in both AM and SSB. Its used
mainly at Squadron and Group level. I don't recall the exact frequency but
its in the 26mHz range.

Jimmy, former Civil Air Patrol member.

Hi,

the real reason is that only in the USA and in no other country this band exists and because of this there are only a few hams who needs a equipment for this band, and because of the low number of hams who needs this, the industry do not develop these transceivers.

Hi all! Well during a slow week myself and another Ham analyzed our Icom 706's to make a tuner simulator to give us the 20 second tune using CW and a sidetone for manual tuners. The circuit is attached, build it for about $10-12 if you by all at Radio Shack, cheaper if from the junk pile. Also you can make a $2 version if you put a 1 uf Tantalum Cap across the Key(-) and Start (+) pins, a 10k resistor from the key line to a switch (leave in open position) and tie to ground. When connected, turn on 706, close SW and it will begin a 20 second tune cycle, when done tuning push tuner button on front of 706 or wait for 20 second cycle to finish. Then open SW and its ready for the next time.

John,

Could you be referring to Ham Radio Horizons? These were published by Ham Radio Publishing as an aid to beginners. I believe I still have many of them in storage. I used to teach ham courses and found them quite valuable.

Clarify please.

I'm not familiar with this magazine, but if you don't mind me interjecting, I think that the ARRL book for aspiring hams called "Now You're Talking!" is very well written and easy to understand. It's available from the ARRL, of course, and also at many Radio Shack stores.

Good Luck to your nephew. Regards, Randy, N1ZUO.

Hi,

I have a yaesu FT-8500 dual band mobile. Several months ago the sensitivity on the 2m side went down by about 75 %. Repeaters that are very close can not be heard until right on top of them. The 70cm side works with no problems. Anyone ever experience this problem or have any ideas on a fix? Thanks in advance.

5386. Kenwood TM-V7A Mod Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-15 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <3857E7F9.29B712E2@earthlink.net>
Source record: 92032

Holiday Greetings From N6XQY, Doug in Garden Grove, California.

I have a TM-V7A that has had the published mod performed on it to open up the VHF and UHF bands. This involved removing a SMT zero ohm chip from position 0 on the front PCB. No problem, as it was done prior to my purchasing the rig. I also receive the air band in AM, but this is a stock feature, apparently.

Where I am left scratching my head is how to get the rig to deliver the 800MHz band receive, which is mentioned in an addenda attached to the originally posted mod, located everywhere mods are found. Mike Bowyer, the author of the addenda, indicates that his V7E (European version) was mod'ed back to U.S. configuration and then some, and delivers 800MHz just fine, but when I attempt to get the 800MHz going, all I get is a confirmation beep from the receiver, after pressing the MHz button in UHF MR or VFO modes. Am I missing something here? Any help is appreciated.

Best Regards,

Doug Gavilanes, N6XQY

For sale an Alinco ALR22T 25 watt mobile 2 meter rig. Unit works well
with the exception that there is an intermittent in the microphone cable.
Has 20 memories and includes a mobile bracket, and copy of manual.
$85.00 e-mail please

Good and useful post.

5391. Alinco DX-70T & SEC Power Supply for Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-15 00:00:00 UTC
From: rjones@mail.cccd.edu
Message-ID: <838sb8pia1@spock.dis.cccd.edu>
Source record: 92037
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings!

I have the following equipment for sale:

Alinco DX-70T HF+6 meter rig
100 watts on HF
10 watts on 6 meters
AM/FM/CW/USB/LSB
built in wide/narrow filters
all the other usual features of a modern rig
with original hand mic, power cord and manual

See www.alinco.com/usa.html and click on the DX-70T(H) link
for more detailed specifications.

SEC-1223 switching power supply
23 amp surge, 20 amp continuous
form factor and color matches nicely with the DX-70T

All equipment is in excellent cosmetic and operating condition.
Asking $550 or best offer. I prefer to sell the items together
but will sell seperately if necessary. Will pay for shipping
within the continental US only. Otherwise, we'll negotiate.
Please reply by e-mail.

Thanks for reading,

Rick, N6WQY

Very rare Hammarlund HC-10 receiver SSB adapter, serial # 923, circa 1958. I have only seen one other in 40 years. This one is Collins-scale EXCELLENT+++, with slot filter, passband tuning, noise limiter, squelch, variable AVC, and original factory manual. Use with any receiver having 455kc IF. Truly beautiful condition. $545 + shipping firm, no trades. Tks es 73!

I just did my first transaction as a result of a news
group offer. There are some good tips in here that I
didn't use. In 2 more days I'll know if I got ripped
off or not. :) Jimmy KB5FSV

MSisco9939 (msisco9939@aol.com) hath said:
: If you do not care about being Ripped-Off
: or Miss-lead, then please disregard. If you
: have been a VICTUM, I would suggest you
: read on (AND SAVE)
: ==
: ITS TIME AGAIN...I have being seeing person(s)
: being RIPPED-OFF and MISS-LEAD by Scam Artists
: time and time again, and thought the following
: might be helpfull. PLEASE, this is a "Personal"
: point of view and "MAY" or "MAY NOT" reflect the
: views of others.
:
: Especially Scam Artists !!
: **
: 1. KNOW WHO YOU ARE DEALING WITH !!!!
: **
: a) Ask for a Full Name
: b) Ask for a Home Address (Note at bottom)
: c) Ask for a Home Phone Number
: d) Ask for a Work Phone Number
: e) Ask for "Any" Special Licenses; Ham Radio,
: CET, Radio Telephone, etc.
: ++
: Notes:
:
: Watch Out For P.O. Boxes, and PLEASE NOT
: everyone with a P.O. Box is Untrustworthy
: or a Scam Artist. (Even I have a P.O. Box),
: and many persons live in Rual Areas.
:
: I have just found that "Sometimes" Scam Artists
: like to use them, and use Miss-Leading DOMAIN
: Systems as a cover, some even using a Pay Telephone
: as a return number.
:
: BE VARY CAUTIOUS about "ANY" Bussiness or DOMAIN
: provider that has "ONLY" a P.O. Box. for a return

: address, with little or no substance. If it has
: been under construction for some period of time,
: it may be worth a second look, and even a third.
:
: ==================>BEWARE<====================
:
: Some Domain Providers, Bussiness, and Scam Artist
: have easily manipulated ISP's and have been known
: to Create Fake (or similar) EMail Names and
: addresses to "LOOK JUST LIKE THE REAL THING" Some
: Domain Providers also been known to manipulate "Tag"
: counters to show they have been hit 1000's perhaps
: 10's of thousands of time to "LOOK LEGIT"
:
: ==============>USE COMMON SENSE<===============
:
: **
: 2. ASK FOR REFERENCIES !!!!==>AND I MEAN ASK<==
: **
: a) Ask the Person or business "How Long" they have
: been trading / swapping / on the NewsGroups.
: b) Ask about "ANY CURRENT" or PAST transactions on
: Internet, and Email Address of the person delt
: with.
: c) Ask if they are a "DEALER" cross check with
: the Telephone Company in the City the Dealer is
: in.
: ==
: NOTES:
:
: EBAY has a "GOOD" way of judging a persons Charactor,
: and most anyone can check the FEEDBACK profile of
: persons on EBAY. In General, the Higher number of
: POSITIVE responses, the more favorable (or honest)
: the person probably may be.
:
: SACM ARTIST have a VERY DIFFICULT TIME in manipulating
: the safe gards in Ebay, and these safe gards can add
: to the price of a item being offered. Some Like Ebay
: and some don't, but Ebay is a Fact of Life, and will
: not be going away anytime soon.
: ==
: **
: 3. ASK QUESTIONS ABOUT THE EQUIPMENT !
: **
:
: a) Ask How Old the Equipment / Material is
: b) Is it operational?
: c) On a scale from 0-10, 10 being Brand New, How
: would it be rated.

: d) Has it ever been Repaired or Serviced?
: e) Does it have the Original Model / Serial Tags?
: g) Will the person selling the equipment stand behind
: the purchase for a short period of time? Especially
: Helpfull on HIGH END Items.
: ==
: Notes:
:
: On FREQUENCY SENSITIVE equipment, make sure its in the
: range you may be interested in. Again use COMMON SENSE!!
:
: Would you spend 1000.00's of your hard earned monies
: on a piece of JUNK? I see persons doing that at many
: times on old beat up gear all the time. What a Waste!
: ==
: **
: 3. NOW TO THE "M O N I E S ". THIS IS A VERY TOUCHY
: SUBJECT HERE ON THE NEWSGROUP !!!!
: **
:
: a) BEWARE of the $25.00-$50.00 SCAMS. They are Very
: Hard to collect on when a deal falls through.
: b) BEWARE OF "SENDING MONEY IN ADVANCE"
: c) Keep your receipt if you use a Postal Money Order
:
: Notes:
:
: Again this is a VERY TOUCHY subject, and probably
: has many points of view. I will give up one of my
: secrets. Personally, I do Not Care for COD's. One
: really has no guarantee if they perhaps are going
: to receive a Box of Bricks, or receive a bad check.
:
: If one uses some simple safe gards, one can "Lock"
: in a deal with a seller by offering a Postal Money
: order in advance, while someone else is just giving
: thought of what to do, a smart buyer has already has
: a check on the way.
:
: When a Postal Money Order is sent, it comes under
: the guidelines of Postal Fraud if you have been Miss-
: lead or Scammed. Altough you may not get your monies
: back, rest assured, Postal Inspectors will be looking
: into the complaint....Sometimes these Scam Artist get
: more than they bargin for. Banks and Local law enforc-
: ment have a tough time following up o a complaint.
:
: On the other side of the coin the SELLER can
: receive his funds in just a day or two, and BUYER
: (if the seller is reputable) SHOULD receive his goods

: in just few days.
:
: The whole trade / transaction is completed in just a
: few days. Also please note that this is ONLY TRUE
: if BOTH parties are responsible persons. Many things
: can interupt a transaction.
:
: a) Computer Crash
: b) Family Emergency
: c) Illness
: d) Cheaper price being offered
:
: So again, its pretty important that a transaction be
: completed in a timely manor.
:
: I have varified Federal Express does a Super Job on
: COD's, but they still are a bit expensive. UPS on the
: other side, well they are still improving, but my
: experience has showwn they can take weeks to deliver
: a check to the sender.
:
: SCAM ARTIST "JUST HATE" POSTS LIKE THIS ONE, AND MANY
: TIMES WILL REPLY WITH A NEGITIVE RESPONSE, BUT SINCE
: THE NEWSGROUP IS IMPORTANT TO THOUSANDS, MAYBE THEY
: (THE SCAM ARTIST) WILL JUST GO ELSEWHERE
:
:
: MAKES GOOD BUSSINESS (AND GOOD SENSE)
:
: HAPPY TRADING
:
: MS
:
:
:

I just bought a Hallicrafters SX-101A, a receiver from my novice days.
My original transmitter was a Knight-Kit DX-60B and a Heathkit HG-10
VFO.

I was wondering what SSB transmitters would have been typically used
with this receiver?

Hallicrafters HT-32 ?
E.F. Johnson Viking Invader ?
Collins ?
Globe ?
Gonset ?
etc. ?

What is the typical price range for these transmitters in GOOD working
condition to collectors quality.

Many thanks in advance.

Dennis WB3KUM/9

Heath manuals for sale.
All are originals, and are in good condition.

GR-900 TV set - schematic diagram (large) with
large size parts list $ 2
GR-2000 TV Set - Five book set $ 15
GR-2050 TV set $ 8
GRA-601 TV Clock $ 5
"Troubleshooter" VOM $ 4

HN-31 A Dummy Load manual. The manual is
in the smaller "half size" format. This manual looks
like new, and has NO check marks in it. $ 8

All manuals are in good shape. All are originals and not copies.
These are manuals only. I no longer have the actual item.

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

The only place I could find info to compare was in the guide for one of
my tube testers. They are close, but not exactly the same. It might
work, but I don't really recommend for that radio. Mainly cuz the 530 a
good rig, and I'd rather have the exact part in it ..:) MK

Yep, not too difficult though. If you look through your manual, in the packet portion (p79), (the manual is available on the kenwood web site BTW) they state that the input voltages for the packet connector are basically TTL levels (0 & +5). Now, RS-232 out of your computer is more like +12 & -12 (actual values can be +-3 to +-25 I think, but just about everything uses +-12). So, a conversion is needed!

Now, wouldn't ya know it, there's plenty of ways to do it! You can use some diodes & transistors, or, chips designed as RS-232 transceivers such as the 1488 & 1489 (Motorola & others). The chip solutions require a power supply (unless you get tricky with some of the RS-232 signals and caps, etc. to use them as a power supply), but power's not really a big deal for most hams.

Then all you need to know is what pins to use on the connector. I have not personally checked this (yet), but I have it on fairly good authority that the mini DIN pinout for the PG-4s looks like this:

Pin Signal
--- ------
1 Unused
2 Gnd
3 Receive Data
4 PR9 (name in manual - connect to pin 5)
5 PR1 (name in manual - connect to pin 4)
6 Transmit Data

And, of course, the pinout to use on your PC's RS-232 is:

Pin Signal
--- ------

1 Unused
2 Receive Data
3 Transmit Data
4 Unused
5 Gnd
6 Unused
7 RTS (connect to pin 8)
8 CTS (connect to pin 7)

So, the TTL side of your buffer chips would connect to the radio's mini DIN, and the RS-232 side to your PC. Remember, PC's transmit goes (through 1489) to radio's receive, and radio's transmit goes (through 1488) to PC's receive.

Somewhere, I seem to remember someones website with a circuit using diodes & transistors, but I can't remember where it is anymore. I'm planning on building something similar to what I described above, but I think Dallas Semiconductor or Maxon makes some transceivers which power themselves off of the RS-232 signals, making the power supply unnecessary. I still have to go looking for those...

I am trying to setup a Motorola Flexar UHF to operate on a repeater channel as well as direct talk-around. The radio is setup to switch both the TX and RX channels and I need to lock in the RX so I only need one receive crystal. Can anybody advise me on where to put the jumper to lock the RX? Thanks and 73's Don KB6GQA

Since all VSWR readings are "relative", you need only to make sure the meter will read full scale while transmitting with the meter in the "set" position. Then you turn the meter to "read" or alternate labeling and transmit again. Then you can determine the VSWR. The scale calibration is based on the fact that the "forward" power indicates full scale.

Looking for IC54--8251A UART and IC55--4040 CMOS Binary Counter to enable the computer port on my R5000.

I am sure that they are available through Digi-Key but I'd rather not pay the minimum order if I can get them from private stock.

thanks

I have a Knight Kit T60 that seems to go into oscillation during key-up.

Have you had this kind of problem with yours?? does it need to
be neutralized in some manner??

I works fine into a dummy load, but when I put it on an antenna,
during key-up, the thing will still show RF output.. looks like
an RF-feedback problem..

perhaps you or another T60 guru can tell me if you have
found a specific fix other than perhaps a neutralization
adjustment..

Trish

HT turned off and left on battery charger all day (battery is 9.6v .600maH NiCad). Turn it on with output power setting at HI (6 watts). Radio will not transmit. Choose Func-Lock followed by 6(Po). Set power to L2 (1 watt). Radio transmits fine. Set power back to HI. Radio transmits fine.

I reset to factory defaults before the above. I cannot transmit on HI power at times but can always cure it by switching to L2 and back again (at least so far).

Anyone else encounter this? Explanation?

(high temp alarm is not set)

HT 32 for the affluent, HT 37 for us common people. Johnson Pacemaker for SSB, or Viking Valiant for AM; Globe went directly to transceivers for SSB under the Galaxy name, but for AM a Globe King would have been a match, and a Collins 32S1 for a real mis-match. Collins 32V3 was a little early for the SX 101. Lots of other minor players, a perusal of a contemporary ARRL Handbook advertising section, and the ads in CQ and QST at the time would provide the widest selection. As for current price, $10 to $1,000, depending.

Duracomm power supplies are (or was) sold by:

Duracomm Corp.
2119 Atlantic
North Kansas City, MO 64116

The Company is/was owned by John Fuhrman. I believe he is (or was) a HAM. I have one of his switching 22 amp power supplies and it has worked great for me for a number of years and is still in use. When I first got it, it had a lot of noise which I could hear in my receiver. I wrote John about it and he had me send it to him. He totally cleaned it up, and sent it back to me at no cost to me. He is a great guy, and his power supply has never failed me. Oh, the little switching power supply that TenTec used to sell for the Scout was a Duracomm, so I have been told.

I don't know if he is still in business. I have not heard from him in a number of years.

Gary,
Unless the switching power supply is designed to remove noise (both conductive and radiative) as much as possible, it will genearate so much noise in the whole HF and VHF spectrum that the radios is not capable of normal receiving. There are several switching power supplies used in ICOM, Yaesu, Kenwood are quite acceptable but inexpensive switching power supplies used in general computer and data processing equipment is not suitable for radio use. There are generally three topologies (Fly back, Forward converter, Half Bridge) for the switching power supplies and the most economical one is Flyback mode and this is the most noise generating type. Icom and Yaesu use forward converter topology. Of course, switch mode is more efficient and generally up to 80% (depend on the output voltage and current) is achievable while the Linear type only gets 30 to 45% at most. Linear type is heavier and generates much more heat. So my recommendation is to use well known switching power supplies originally designed for radio use but avoid data processing and computer power supplies. But Linear power supply is still widely used and quite economical, so base station use, I will go for the Linear type for the most application except for weight and size. I heard that the latest MFJ Switching Power supply is quite good.
Best luck to you.
de K6hm

Source record: 91876

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive" Anderson Powerpole connectors that have become (or are becoming) the most popular power connector for interchangeability in the emergency community and Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with the hearing the concerns of hams across the country in newsgroups of where to purchase these connectors and other "hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "hams helping hams" is now extended from my web site to you.

Ken, KM6YH
owner of www.powerwerx.com

The TM-G707 is rather similiar in many respects. The Kenwood FTP site mod for the TM-G707 was basically removing two little green jumper wires on the PC board behind the plastic radio front housing. This modification gave me receive on 800 MHz, (cellular blocked, of course.)

But if he touts it as "rare" like it seems everything on ebay is, some
sucker who dosen't know any better may bite.

5437. FT: Toshiba laptop for 440 HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <Y3Y54.3455$BE.35400@news.rdc1.wa.home.com>
Source record: 91911

I have a Toshiba laptop computer to trade for a 440 HT (HTX-404), or what have you?

Hardware:
* Toshiba T1000/SE Laptop Computer
* 8086 CPU, 640K RAM
* MSDOS 3.3 in ROM
* 2 MEG RAMDRIVE
* 1.44M Floppy
* Standard parallel printer port
* Standard serial port
* Good NiCd battery
* Battery Eliminator/Charger
* Manuals

Software:
* AutoMenu
* Microsoft Word for Dos
* SuperMorse 4.16 Code practice package
* Log-EQF QSO logging package

Older unit runs DOS only but great for ham logging, student or packet.
If you'd like, I can send a photo.

Thanks,
Rick

5442. Re: TS-440S Computer Interface Software Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: vk2kdg <danny_butler@ssa.com.au>
Message-ID: <839rkp$8au$1@nnrp1.deja.com>
Source record: 91916

I am in the final stages of writing an Interface program for my TS570.

I think it will cover a lot of the functionality of the 440.

So far, it controls and displays the following;

- Main Freq, VFO A/B, Memory, up down of these with major selectible
steps
- RIT/XIT display and changes
- Split Frequency operation and display
- NB, Beat Cancel, Power, etc......
- Memory download from Radio to PC
- Memory upload from PC to Radio
- First 100 memories for the upload/download
- Currently another 100 memories for user to define. I will probably
extend this to 300 or more. Easy to do
- Ability to copy current Freq/Mode to memory and auto move to next
memory to do again. Bit like the Quick Memory function
- Ability to set Radio with current memory location displayed on PC
- Memory is setup on a separate screen with Main Freq, Split, Mode,
Tone, user description etc...

There is a bit more but I think you get the idea. All of the above works
beautifully. The layout is similar to the TS570.....

It is written in Visual Basic and will run under Win 95/98. The
executable file is less than 1 meg...

That's it....

So, if you are interested in the near future... Keep an eye out for it.

Source record: 91922

Hi Jim:

Thank you for your support ! I just have seen to many persons being Ripped Off
and miss-led buy Scam Artist who Hide
behind Fake Email address, Scam Web
Sites, and pretend to be legit.

Rest assured, they are (Scam Artists)
are on the Run, and will not be fooling
anyone other than themselves.

Happy Holidays, and Keep trading !

Monty
WB6UKD

This information should be posted in here more often...I just did my first
transaction as a result of a news group offer. There are some good tips in
here that I
didn't use. In 2 more days I'll know if I got ripped off or not. :) Jimmy
KB5FSV

MSisco9939 (msisco9939@aol.com) hath said:
If you do not care about being Ripped-Off
or Miss-lead, then please disregard. If you
have been a VICTUM, I would suggest you
read on (AND SAVE)
==========
ITS TIME AGAIN...I have being seeing person(s) being RIPPED-OFF and MISS-LEAD
by Scam Artists
time and time again, and thought the following might be helpfull. PLEASE, this
is a "Personal" point of view and "MAY" or "MAY NOT" reflect the views of
others.

Especially Scam Artists !!
****
1. KNOW WHO YOU ARE DEALING WITH !!!!
****
a) Ask for a Full Name
b) Ask for a Home Address (Note at bottom)
c) Ask for a Home Phone Number
d) Ask for a Work Phone Number
e) Ask for "Any" Special Licenses; Ham Radio, CET, Radio Telephone, etc.
++++++++++
Notes:

Watch Out For P.O. Boxes, and PLEASE NOT everyone with a P.O. Box is Untrustworthy or a Scam Artist. (Even I have a P.O. Box), and many persons live in Rual Areas

I have just found that "Sometimes" Scam Artists like to use them, and use Miss-Leading DOMAIN Systems as a cover, some even using a Pay Telephone as a return number.

BE VARY CAUTIOUS about "ANY" Bussiness or DOMAIN provider that has "ONLY" a P.O. Box. for a return address, with little or no substance. If it has been under construction for some period of time, it may be worth a second look, and even a third.

==========>BEWARE<==========

Some Domain Providers, Bussiness, and Scam Artist have easily manipulated ISP's and have been known to Create Fake (or similar) EMail Names and addresses to "LOOK JUST LIKE THE REAL THING" Some Domain Providers also been known to manipulate "Tag" counters to show they have been hit 1000's perhaps 10's of thousands of time to "LOOK LEGIT"

==========>USE COMMON SENSE<==========

****
2. ASK FOR REFERENCIES !!!!==>AND I MEAN ASK<==
****
a) Ask the Person or business "How Long" they have been trading / swapping / on the NewsGroups.
b) Ask about "ANY CURRENT" or PAST transactions on Internet, and Email Address of the person delt with.
c) Ask if they are a "DEALER" cross check with the Telephone Company in the City the Dealer is in.
: ========== NOTES:

EBAY has a "GOOD" way of judging a persons Charactor, and most anyone can check the FEEDBACK profile of persons on EBAY. In General, the Higher number of

POSITIVE responses, the more favorable (or honest) the person probably may be.

SACM ARTIST have a VERY DIFFICULT TIME in manipulating the safe gards in Ebay, and these safe gards can add
to the price of a item being offered. Some Like Ebay and some don't, but Ebay is a Fact of Life, and will not be going away anytime soon.
==========
****
3. ASK QUESTIONS ABOUT THE EQUIPMENT !
****

a) Ask How Old the Equipment / Material is b) Is it operational?
c) On a scale from 0-10, 10 being Brand New, How would it be rated.
d) Has it ever been Repaired or Serviced?
e) Does it have the Original Model / Serial Tags?
g) Will the person selling the equipment stand behind the purchase for a short period of time? Especially Helpfull on HIGH END Items.

==========
Notes:

On FREQUENCY SENSITIVE equipment, make sure its in the
range you may be interested in. Again use COMMON SENSE!!

Would you spend 1000.00's of your hard earned monies
on a piece of JUNK? I see persons doing that at many
times on old beat up gear all the time. What a Waste!
: ==========
: **********
3. NOW TO THE "M O N I E S ". THIS IS A VERY TOUCHY SUBJECT HERE ON THE
NEWSGROUP !!!!
: **********

a) BEWARE of the $25.00-$50.00 SCAMS. They are Very
Hard to collect on when a deal falls through. b) BEWARE OF "SENDING MONEY IN
ADVANCE"
c) Keep your receipt if you use a Postal Money Order

Notes:

Again this is a VERY TOUCHY subject, and probably has many points of view. I
will give up one of my secrets. Personally, I do Not Care for COD's. One really
has no guarantee if they perhaps are going
to receive a Box of Bricks, or receive a bad check.
:
If one uses some simple safe gards, one can "Lock" in a deal with a seller by
offering a Postal Money order in advance, while someone else is just giving
thought of what to do, a smart buyer has already has a check on the way.

When a Postal Money Order is sent, it comes under
the guidelines of Postal Fraud if you have been Miss-led or Scammed. Although
you may not get your monies back, rest assured, Postal Inspectors will be
looking
into the complaint....Sometimes these Scam Artist get more than they bargin
for. Banks and Local law enforc-ment have a tough time following up on a
complaint.

On the other side of the coin the SELLER can
receive his funds in just a day or two, and BUYER (if the seller is reputable
) SHOULD receive his goods in just few days.

The whole trade / transaction is completed in just a few days. Also please
note that this is ONLY TRUE if BOTH parties are responsible persons. Many
things can interupt a transaction.

a) Computer Crash
b) Family Emergency
c) Illness
d) Cheaper price being offered

So again, its pretty important that a transaction be completed in a timely manor.

I have varified Federal Express does a Super Job on COD's, but they still are a bit expensive. UPS on the other side, well they are still improving, but my experience has showwn they can take weeks to deliver a check to the sender.

SCAM ARTIST "JUST HATE" POSTS LIKE THIS ONE, AND MANY TIMES WILL REPLY WITH A NEGITIVE RESPONSE, BUT SINCE THE NEWSGROUP IS IMPORTANT TO THOUSANDS, MAYBE THEY (THE SCAM ARTIST) WILL JUST GO ELSEWHERE

MAKES GOOD BUSSINESS (AND GOOD SENSE)

HAPPY TRADING

MS

Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

5452. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <83a46d$74o$1@news.hawaii.edu>
Source record: 91926
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

5455. FS: 10.4 GHz 10W power amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: Jochen Zilg <mmwave.zilg@t-online.de>
Message-ID: <83agh4$ds0$1@news05.btx.dtag.de>
Source record: 91929

The unit is a complete Amplifier system including AGC, Isolators at input
and output.
Gain > 47 dB, Power out at 1 dB comp. point > 39.5 dBm (measured after the
isolator).
The case is small enough to mount it directly at the feedhorn of a parabol
antenna.
System was originally used as transmitter amplifier in 16 QAM radio relay
link (SIEMENS).
Amplifiers are tested in the factory and not used at all.
Power supply +11 to 14 V 7 A and - 9.5 Volts 100 mA.
Price: 900 DM without transport costs.
Power output can be raised by skilled amateurs to more then 10 Watts by
replacing the matched
10 W Transistor by a newest 15W Transistor (Toshiba)....

5458. Re: FT-990 and TS-940S

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: John <jh-lewis@swbell.net>
Message-ID: <eA664.1110$q54.8942@nnrp2.rcsntx.swbell.net>
Source record: 91932

I've had both, and for my money ordinarily the 990 gets my vote as the best "most bang for the buck" radio ever made. However, in this particular comparison, I would have to go with the 940 - it simply has more features than the 990 (and that's the only reason for my choice).

Something to watch for - One possible issue with the 940 may be in getting it serviced. Kenwood is constantly dropping rigs from their service list and I don't know if they've discontinued servicing the 940 or not yet... Check with them first before buying any older Kenwood rig, unless of course you do your own repairs. I haven't heard of problems with getting any Yaesu rig serviced (yet).

Best of luck - they're both very nice radios.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

5462. Re: LDG Electronics Kits

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-16 00:00:00 UTC
From: griffithj@my-deja.com
Message-ID: <83b3au$44c$1@nnrp1.deja.com>
Source record: 91936

>Hi, Dan
Yes, I have their AT-11 orignal version 2 auto antenna tunner. Kit went togather fine, but it's not a Heathkit, in that you need to have some kit assemply knowledge of your own and some background in componets. It also works as advertised, but my tunner puts "birdies" in the receiver. You can put it to sleep by pushing a couple of buttons and stop the hetrodines in the receiver.

I E-mailed LDG about up grading my tunner. They said I could not, too many changes. I like the meter concept, but will not invest another $200 into another tuner, and because of paying for their steping stones to the next model, and not being able to upgrade as orignally adverised with the AT-11, I will not buy any more to their kits.

I will invest in a computing watt meter, WM1, by Autek Research. I am not going to get burned by kits in progress an not able to upgrade even though there orginal advertising said it could be.

The tunner tunes fast and works well. The new model does have some added advantages, and is still a lot less expensive than others out there. I you buy it though, and they upgreade, there in no value in buying a second and you may want to look at a SCG or a new radio with a built in tuner. If you have $200 you can duplicate some where elce in the same type of thing later on, go for it. I am going to buy the Autek computing watt meter insted of LDG's and TT High power tuner. Both seem to be good values, and you won't have to re-buy them later.

>Hi, Dan
Yes, I have their AT-11 orignal version 2 auto antenna tunner. Kit went togather fine, but it's not a Heathkit, in that you need to have some kit assemply knowledge of your own and some background in componets. It also works as advertised, but my tunner puts "birdies" in the receiver. You can put it to sleep by pushing a couple of buttons and stop the hetrodines in the receiver.

I E-mailed LDG about up grading my tunner. They said I could not, too many changes. I like the meter concept, but will not invest another $200 into another tuner, and because of paying for their steping stones to the next model, and not being able to upgrade as orignally adverised with the AT-11, I will not buy any more to their kits.

More opinions....

Basically they both make the voltage you need, and current the
radio demands.

The switching supply is 1/5th weight of the linears supply, nice!

When the switcher breaks..you might as well throw it away! Many
parts will fall like dominoes when the supply fails and figuring
out what went wrong is near impossible.

Linear supplies can usually be repaired easily.

True - I don't get much on-the-air practice. The reason is that I don't get much on-the-air time *period*. I grab a few minutes whenever I can, but when presed for time, I can have far more QSO's on SSB than I can with CW. It's the facts of modern life, I'm afraid. CW will never be my preferred mode perhaps until I retire. Too bad. I love challenges.

> 46.78 MHz (resonant) too high to measure SWRs
> 150.9 MHz (resonant) 1.3:1 SWRs
> 518.4 MHz (resonant) 1.8:1 SWRs

OK, I'm curious - how reasonable is it to use an SWR analyzer to check an HT antenna? Supposedly the body of the radio and the body of the operator serve as a counterpoise of sorts, so that implies that the analyzer would "see" a different SWR than would the HT.

I had an MFJ half-wave telescoping antenna and used it for several months, but felt its performance wasn't much better than the stock duck. Finally, I put it on an (MFJ) analyzer, and the best it did was about 2.5:1, so I stopped using it at all (being unsure of the robustness of my finals). Still, I have always wondered whether that measurement bore any semblance of applicability.

For fast, low-QRM tuneup of my HF dipole, the analyzer is great, of course.

5487. Re: Help w/ SWR meter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-17 00:00:00 UTC
From: CJ <cjr@visi.com>
Message-ID: <385A6766.CF21F168@visi.com>
Source record: 91811

These devices come in two varieties (and also a rare third variety). The most common has one meter and a switch to select between Forward/Reverse (maybe FWD/REV or CAL/SWR or CAL/READ or even SET/SWR etc.). In any case the forward setting of the switch is the "set position" no matter what it is labled. Transmit with the switch in that position and set the meter to full scale with the calibrate knob. Then transmit with the switch in the other position and read SWR.

If the device has two meters, the idea is the same but there is no need for a switch. Set the forward meter to full scale with the calibrate knob while transmitting and read SWR from the other meter.

Finally, there are meters with two pointers. With these you read SWR from the meter scale at the point where the two pointers intersect. I don't think you have one of these.

Your SWR meter is likely intended for CB use. It will probably work well enough at 6m or 2m.

Well, mainly weight, size, and cost per watt. For small supplies, say a few amps, it probably doesn't make a whole lot of difference. For big, high amperage outputs, switchers a re much lighter and smaller, and generally cheaper (to manufacture anyway). All this is due mainly to transformers. The huge transformer needed for a big linear supply is costly and heavy.

Ready for a quickie tutorial on power supplies?

Linear supplies generally use a transformer to convert 120/240 VAC to something close to what the output voltage needs to be. They then use "linear" methods to turn this low voltage AC into nice smooth DC. They use diodes to rectify the AC, inductors, capacitors, and resistors for filtering, and many will have fairly complex circuitry to regulate voltage and limit current.

Switching supplies generally take the input AC voltage and rectify it directly into a high voltage DC. Often they use a voltage doubler type of circuit resulting in this DC voltage being on the order of 300 to 500 volts. This HV DC is stored in a fairly large capacitor.

The HV DC is then "switched" via a high frequency oscillator to drive transformers which step the voltage down to the necessary output voltage. High frequency AC can use small, light weight, cheap transformers.

Regulation is generally accomplished via pulse width modulation of the switching oscillator. For low demands, the duty cycle is low, as output demands increase, the duty cycle increases. With the advent of PWM switching control ICs, these supplies have become fairly cheap to build as well as fairly reliable.

A big advantage of switching supplies is that they are fairly tolerant of wide ranging input voltages. If you put, essentially, another switcher stage on the input to feed the HV Caps, you can make a supply which will run on a very wide input range (we use one in some of our

products which will take 80V - 260V, which is great if you're trying to be compatible with both US (120V) and Europe (240V), just plug it in and it works). Since they rectify the input, they can even work with a DC input of sufficient voltage.

A big disadvantage of switchers is that they ARE noisy, electrically. They use high voltage, high current, AC, which is generally more of a square wave in nature, so there are loads of nasty harmonics generated. This noise can be filtered, very effectively if you put enough effort into it, but there will always be more noise that you can get with a linear supply (basically, the linear supply is a whole lot easier to filter). Is this a problem? Probably not, depending on the application. Just be aware that it could be a problem, especially with really cheap switchers.

Another disadvantage of switchers is reliability. There's not much to fail in a linear supply. R's, C's, and L's are pretty tough to kill if the design uses parts with sufficient margins. Switchers use high voltage MOSFETs for the switching transistors, turning on and off 300 to 500 volts out of a big cap (like 500uF). If the control goes haywire and you leave the transistor on too long, it's toast, or more accurately, a fireball followed shortly by a puddle of molten silicon and epoxy. The subsequent damage is generally not worth repairing.

Hope this helps...

5489. Need HELP on ICOM IC-2400 Display repair

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-17 00:00:00 UTC
From: alb32 <albertoNOalSPAM@aec2000.it.invalid>
Message-ID: <0bea5167.37f80b1f@usw-ex0110-073.remarq.com>
Source record: 91813

TNX for selecting.
I own an "old" ICOM IC-2400 mobile VHF-UHF RTX, that is
working fine in modulation and power, but the display's led
illumination does not light up anymore,
and I can read the LCD only in the daylight or at home.
I need a schematic of the front panel of the transceiver or,
more simply, a hint to fix the problem (that should NOT be
"Just throw it away and buy something
newer..."). Tnx for any help

Steve,
What kind of box will this 101E be shipped in and how good are the tubes?. now
that's the one with the RF Proc,and the DCconverter ?????i am looking for one but
it has to be very clean let me know
if the one you have is what i am looking for i won't to put it with my mint Kenwood
TS-520 and
show as what radios were when i first got into this hobby.

YOUR RADIO IS OK.

Turn off the Noise Blanker in A.M. mode.

The same problem happens when you receive a
strong SSB signal.

Yes it can but not with ADMS.
You need to go here http://www.icongrp.com/~sllewd/download.htm
and download EVEv170.zip and VER050.zip both are needed to run EVE.
use the same cable you use with ADMS.
It works great.

> my preferred mode perhaps until I retire. Too bad. I love challenges.
>
> Bob, KI8AB

Hmmm... When I get on the air in the few minutes I also have,
I ALWAYS tune to CW band. It's not about "far more QSOs"...
I'd rather have 1 cw contact than 100 ssb contacts.
Think QUALITY, not QUANTITY.
CW is my perferred mode. And I got 20 years to go to retire.
To each his (or her) own.
CW is a challenge. Make it a higher priority, and you'll overcome!

Hamish,

I am a Red Cross volunteer, and need to monitor the fire frequencies when I am called to a disaster incident. I don't want to mount another radio in the mobile. My Alinco DR-599 does it all, including 800 (but it is mounted in my other vehicle), and when I read that the V7A would also do 800, that finalized my decision to buy it. Now I see that the 707A, which is very similar, offers a factory published mod to receive 800MHz, on the Kenwood ftp site. That makes me think that the V7A should have a similar mod. If anyone reading this can help, please e-mail me. TIA.

Happy holidays es 73,

Doug, N6XQY

I normally hang out in the Harley group but thought this might generate some interest here as well. BTW, I'm WA6ZGL, been a ham since '62 and never leave home without my HTX-202, two-wheelin' or otherwise. Anyway, have a look, ignore it if you aren't interested, take a whack at it if you are, it's a good cause and hell, so far the price is right for this stuff:

http://eddiekieger.com/~dkp/cgi-bin/ek3auction.cgi?ConsumerElec&946150248

Eddie's a friend of mine and sometimes all my hobbies merge like this. All the proceeds go to the EKIII Charitable Trust Fund (http://eddiekieger.com)

Perhaps if you described your installation in a little more detail you may get some better advice than what Chas had to offer. Start by mentioning the following:

- type of radio
- where it is powered from
- type of antenna
- position of antenna

Let's start there and see what happens.

5520. Re: Yeasu ATAS-100 Info/antenna needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-17 00:00:00 UTC
From: Howard Long <howard@howardlong.com>
Message-ID: <83c17f$li8$1@uranium.btinternet.com>
Source record: 91880

The ATAS-100 has a motor inside it which physically expands some bellows, so the antenna height actually alters. I suppose that it is really tuning a coil inside. There is no physical intervention required.

It's designed to work with the FT847 and FT100. I even saw that someone had built a device to use it with an ICOM rig. There were some good FAQs and info on www.en.com/users/rayd/ft-847. The FAQ's don't seem to be up at the moment.

It is designed to tune 40m, 20m, 15m, 10m, 6m, 2m, 70cm. I can get it to tune 17m and 12m too.

I can only say how it works on an FT847. I guess the FT100 is similar.

When you press your FT847 tuner button (in the correct manner - see later), the height of the antenna adjusts, adjusting the tuning. This can take a couple of minutes if you're changing bands, a few seconds if your just retuning within band.

The rig sends out differing DC voltages over the coax which is interpreted by the antenna to either go up or down. So you need to make sure nothing between your rig and the antenna presents itself as a DC short, or indeed that there's any series capacitive coupling in the feeder.

On 2m and 70cm, the antenna compresses to its shortest height, and no retuning on either of these two bands is required.

You need a Triplexer to make the antenna work across all bands on an FT847. I think you can make the FT100 connect all bands through one connector. With the FT847, you need to make 6m go through the HF antenna connector via a menu option, and then connect the HF, VHF and UHF connectors into your Triplexer. I use a Comet CFX-514 for this job, and it works fine.

It works great for me (tuning that is) on 20m thru 70cm with the antenna on a magmount on my railings on my balcony. We have 70MHz in the UK, and it won't tune that unfortunately. 40m and 30m won't tune for me, but then I have a nearly non-existant ground plane at HF. The ATBK-100 ground plane doesn't help with HF, but then it isn't designed to. However, it does bring the SWR down to virtually 1:1 on VHF & UHF. Without the ATBK-100 I had a negligible 1.5:1 on 2m and 1.3:1 on 70cm. In my opinion, the ATBK-100 isn't worth it unless you have a non-metallic balcony.

Actually getting to grips with making the tuner function work is an art unto itself. There's three different sets of instructions: the FT847 manual, the ATAS-100 Operating Instructions and the ATAS-100 Operating Tips. Forget the FT847 manual.

There two menu changes on the FT847 to do, one to set 6m to go throught the HF SO239 and one to tell the rig that there's an ATAS connected as a tuner. That's the easy bit.

There's a series of Tuner button pushing steps which I admit I can't remember. Sometimes you press it momentarily, sometimes for 1/2 second, sometimes hold it in. To be honest, it's a real dog's dinner, and I usually end up pressing it at random until it does what I want.

The annoying thing is its tendency to give up and retract (or reset) the antenna fully. Now, there's no feedback from the antenna to say that it's at its fully retracted point, so it always takes a minute or so, even if the antenna's already retracted. And if you try to stop it, you're back to square one and have to go through the 'retraction' all over again.

Performance isn't much to write home about, especially on HF, but what do you expect for a 5' antenna? What you're buying is either something the neighbors won't go AWOL about, or a _really_ neat mobile HF antenna, one where you can retune from the warmth of your car seat.

Regards,

Howard G6LVB

How do you acess the hidden menu in an 850?
I was told there is a hidden menu to allow change of the transmit
filters, as well as allowing you to widen the transmit audio.
If anyone has any experience increasing power with this radio, or any
other mods please reply. has anyone tried the add on kenwood dsp unit?

I do not own one but I have heard first hand from friends they are worth the $140 they want for them. Also, they are made under different name: magnum ..and a few others but all out the same except the radio shack has a CPU that will not transmit outside the 10 MTR band. The Radios Shack also has the best price and warranty in my opinion. However, I di to the Magnum Site and found out they are coming out with a cimilay radio but for 40 meters and also for 2 meters. Not sure of the URL. I did a search for
"MAGNUM" or 10 meter radios etc under ALta Vista.

I stand corrected, it was a T-60. Sorry, it been a few years. Only had one problem, something popped and the final went. Replace cathode resistor and tube and no more problems.

Later replaced with the pretocessors to the Kenwood Twins, the T and JR-399. Then the T and R-599, still have. As typical, I collected a few more sense then.

Thanks for the info. Will monitor for future purchase.

5529. New Kenwood TM-D700A

Newsgroup: rec.radio.amateur.equipment

From: nexus@datasync.com
Message-ID: <83cova$de5$1@news.datasync.com>
Source record: 91889

Picked up the December 1999 edition of CQ Magazine and on Page 3 there is a Kenwood add for a brand new Dual-Band mobile, that looks a lot like the TM-V7A but its got an amber display. It receives 118-524mHz ~ 800-1300mHz (cell blocked ofcourse) it is built on the concept of the TH-D7A which is the Data Communicator.

This mobile has a built in Packet TNC, and APRS. Its also PacSat ready. This looks like a pretty awesome mobile.

Has anyone else seen any articles or reviews, or just more info than what is listed in CQ's add section? Does anyone know of any websites featuring it, I searched but came up with nothing related to the mobile when searching. I'm assuming it just came out because kenwood.net doesn't even have it listed among their radios.

From the looks of this thing, I would say I've diffently found the replacement for my TM-V7A as the primary mobile radio. I'll put the V7A in the house (which needs a dual-band radio) and it should work great with no sunlight to washout the display. The TM-D700A looks like its going to be a winner with Kenwood fans, and is sure to pick up other users as well...

Hi!
Right about most CW being too fast for beginners but I hear quite a few slow QSOs nearly anytime I tune around. Picking up the on the air CW jargon is a very good lesson, too. I remember learning the code and tuning all over for the ones that I could just barely copy, then figuring out some of the odd (at that time) shorthand in use. What a fun summer that was!

Hey Nick,

Make sure your R5000 has a serial # above 8049999. According to service bulletin 919 from Kenwood some units with a serial # below that will not change Freqs via computer control. The problem is IC-52. If your unit is below 8049999 then check IC-52. Make sure it is part # MBM27C128-25JA2. If it is not you will need to replace it also. Just trying to save you some time as I have a unit with a serial # below 8049999 and couldn't figure out what was going on until I found this service bulletin.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a near mint Drake TR4 Station that consists of the TR4C Transceiver, RV4 Remote VFO and the AC4, all in very close to mint condition, with one minor exception. A previous owner of the RV4 made a splice in the interconnection cable, which in absolutely no way affects connection, appearance or operation. I could replace the cable and in effect, remove the flaw, but there is no reason to do so. I have the original manual for the TR4C, which has documentation for the RV4 series VFO and the AC4.

I have been using this station for some time and can honestly say, this is one of the best Drake TR4 systems I have ever seen (been actively hamming for almost 45 years). The reciever sensitivity is excellent and my audio signal reports have always been excellent.

I am looking for a Kenwood TS-830 or a Yaesu FT-102 in excellent condition for an even swap.

Please email me at sam@ab4n.com

Thanks for reading and have a wonderful holiday season.

>Subject: WTB: Handheld
>From: "George M. Winford" gwinford@microgear.net

>
>I'm interested in a simple, dependable, cost effective 2-meter handheld.

I am not selling mine but I reccomend the Alinco DJ-190 or even better the DJ-195 with 5 watts from the supplied battery, wideband Tx and Rx from a simple keypad entry.

Because these Rigs dont cost much to buy new then you may as well save up and buy one new, replacement batteries are expensive and if you buy a second hand handheld then the NiCD battery might hold a very limited charge

If you need to buy a new battery then you have wiped out any saving in buying a second hand handheld so look around for new handhelds on special offer.

One company was selling the DJ-190 for $99.99 although that company has now closed down, I know someone who was so impressed he bought two.

Honestly I would not buy a second hand handheld unless I knew the owner personally and could trust him to answer my questions honestly

Most equipment has some sort of finite life and this may be quite short if it has been misused, a lot of people have burnt out their handhelds by using them as a base station and constantly transmitting the full 5 watts for too long, if you buy a second hand H.T that has been misused and it fails in six moths you will be extremely disappointed, so my advice is buy a new one.

Mostly IRC controls and shafts, coax grounding block, most
appears new and in boxes or plastic bags. Great stuff for a
person that works on older electronics. For more info and
picture see
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item+222157565

The MFJ model LSP-520BX II is a clone of the famous speech processors of 1970's fame. Good for 9-12db increase in signal strength at the DX end without audio distortion--same effect as a KW at a lot lower price. Has both 1/4" phono plug and 4-pin mic inputs, with output cable to be wired for your transceiver. This one is in Collins-scale Excellent condition and ready to go; you supply the mic and 9v battery.$65 + $3.20 to ship USPS Priority. Tks es 73!

Well, if it is an X9000 instead of a XX9000, then he will need an R-XXXX
(I forget the model number) suitcase programmer to do the programming.
The X9000 codeplug must be removed and inserted into the programmer
to change freqs. The XX9000 will work with a RIB and software.

Sorry for posting as response to your message, but
original is gone.

My vote for best portable type rig for ham use is the Grundig Yacht Boy
400.

Has bfo to tune ssb, cw sounds great, receiver is excellent.

I had the Radio Shack tunable job (dont remember model number, but its
the
expensive one), and took it back. Did not hold any water compared to
YB400.

Ahhh, no... Moto never made an "XX9000". The 2nd x is a shadow, not a
model designation. It is a Syntor X9000. It is PC programmable, with
RIB.
You are thinking of Syntor, and Syntor X. Those had the removable PROM
chip,
requiring the outboard programmer.
I only put the designator on the header, because EVERYONE else actually
calls
the rig XX9000, and didn't want to get reponses about the suitcase
programmer.

Hope that clears things up!

I just plug my BNC RG-58 cable from my Inverted Vee into the jack on the top.

For SSB - it seems to work fairly well, although it doesn't sound the same as a Kenwood R-5000!

I found that I had to turn ON the attenuator to hear the SSB signals - that made a BIG difference.

Doug give it up, some people just don't understand. Having one radio with multiple capability is a very useful too, someone shouldn't have to ask why. As for the mod question, they did the same thing with the TH-79AT dualband handheld. Every dual band handheld before it and everyone now after it has the ability to do 800mhz the th-78a and the th-g71a both do but they left it out of the th-79at. Same thing with the mobiles, their dualbands prior to the v7a could be modified, the tm733 comes to mind and now the g707 and the new (just produced) replacement for the v7a the TM-D700A which goes from 118mhz-530mHz ~ 800mHz-1300mHz and it has an AMBER display, check it out December 99 edition of CQ magazine. Page 3.

I don't think there is a mod available for the v7a, its been out a few years now and no one has ever published anything and I know PLENTY of people have asked about it. I think its perfect for people who are narrow-minded (no names mentioned) but as for us who are public-service/safety minded it doesn't fit todays bill.
Jimmy

Douglas Gavilanes (gavilan1@earthlink.net) hath said:
: Hamish,
:
: I am a Red Cross volunteer, and need to monitor the fire frequencies when
: I am called to a disaster incident. I don't want to mount another radio
: in the mobile. My Alinco DR-599 does it all, including 800 (but it is
: mounted in my other vehicle), and when I read that the V7A would also do
: 800, that finalized my decision to buy it. Now I see that the 707A,
: which is very similar, offers a factory published mod to receive 800MHz,
: on the Kenwood ftp site. That makes me think that the V7A should have a
: similar mod. If anyone reading this can help, please e-mail me. TIA.

Almost any short-wave receiver - even a little Sony 7600D will be more
sensitive.
However if you can connect a big antenna and manage to avoid overloading you
will get pleasing results.

Probably reasonably well if you give it a respectable antenna. The
9000 is one of the few scanners with an AM bandwidth narrow enough to
be almost useful on the HF bands, it is still a bit wide, but the
narrow AM is a whole lot better than the 12-16Khz on AOR8000, ICOMS's
etc.

THE DIEHARD DXER

5:00am - Fellow DXers arrive. Crawl out of nice warm bed.
5:30am - Toss all gear into truck
5:45am - Get gear out of neighbor's truck, and put it in yours.
6:00am - Get speeding ticket while hurrying to get to the mountain.
7:15am - Get to "the site," near top of mountain.
7:16am - Start unloading gear.
7:20am - Get poked in eye with 20M vertical by fellow DXer.
7:50am - Arrive at hospital to get eye patched up.
8:30am - Get another speeding ticket while heading up to site.
8:45am - Arrive back at site. Unload antennas yourself this time.
9:45am - Hike up to mountaintop. Pass out from exhaustion.
9:50am - Wake up to smelling salt, and laughter from fellow DXers.
10:00am - Put up antennas, and set up rigs.
10:15am - Fire up rig, call CQ for half an hour; no replies.
10:46am - Hook up coax to rig...
10:48am - Realize that finals are wasted in main rig.
10:50am - Hook up back up rig, this time with coax.
11:00am - Yell CQ, rare VP8 comes back; antenna falls down...
11:15am - Wake up to smelling salt, fellow DXers shaking heads.
11:30am - Guy Antennas.
12:05pm - See long list of QSOs made by fellow DXers.
12:06pm - Notice rare VP8 in fellow DXers logbook.
12:07pm - Beat fellow DXer over head with logbook.
12:09pm - Restrained by rest of DXpedition team...
12:30pm - Back to rig for another attempt.
12:35pm - Nearby lightining strike kills receiver. Notice wet pants...
12:36pm - Look for shelter
12:38pm - Find Cave!
12:41pm - Watch antenna get struck by lightning while hiding in cave.
12;42pm - Wish it was fellow DXer's antenna, or him that was struck...
12:45pm - Realize you're not alone in cave...
12:46pm - Pick up rally big rock...
12:47pm - Mauled by large angry bear.
12:50pm - Get pulled out of cave by fellow DXers.
1:05pm - Finally get talked into receiving medical treatment.
1:30pm - Arrive back at hospital.
1:55pm - Receive series of painful rabies shots, and multiple stitches.
2:30pm - Get out of hospital and return home.
2:35pm - "Explain" stitches and eyepatch to wife.
3:00pm - Realize gear is still up on mountain, with bear.
3:01pm - Wish fellow DXers were still up on mountain, with bear...

3:03pm - Consider taking up drinking.
7:00pm - Get phone call from DXer buddies.
7:05pm - Agree to go on DXpedition again tomorrow...

This is not my original. I saw it in a Feb '98 issue of World Radio and thought it would be neat for it to be sent around again.

Another problem area you might check is the connection to the antenna jack.
Alinco handhand helds are notorious for the problem you mention. Who ever or
what ever (robot welding?) is not doing a good solder job on this board to
antenna jack body. There usually is no wire between the jack body and board.
Just a solder "jump". Check here to see if the "jump" is cracked. I put a
small copper braid on my unit and boy what a difference.......N9IPA

I regretfully have for sale my personal Kenwood TS-940S. I purchased this new from Michigan Radio a year after the TS-950 had been out. It was the very absolute last of the series to enter the US. It had all the final factory revisions and I have never had any problem with it. I have the original box, packing and manuals. This radio is in excellent condition and would make a great Christmas present.
It has the 500Hz CW filter, the 6kc AM and the standard SSB filters in it. Audio on both transmit and receive is exceptional. Comes with Shure 444 Deskmic. I just got a new Yaesu MP. I want $995+shipping.

RF Parts has GE tubes for sale at $64.90 for a matched pair.

They are on line at http://www.rfparts.com.

I have been dealing with them for years and have been fully satisfied.

The GE tubes should work just as well as RCA because today they probably
come off the same assembly line in Russia or China.

You probably blew out the front end rf amplifier transistor. I am not familiar with that radio but high overload conditions caused by nearby transmitters can cause this. Another possibility is low signal injection of the local oscillator (from the synthesizer) at the mixer. You need a schematic, a signal generator, and an rf millivoltmeter to be sure. If you do not have access to this equipment nor the knowledge to use it, then send it to a qualified repair shop.

That would be great if the question were directed to me. I
am talking about the questions directed to the newsgroup
that I "try" to reply to.

FWIW I will try to answer questions but if the reply bounces
because of "your" antispam measures then I WILL NOT TRY
AGAIN.

For those who complain about spam, I have never used
antispam measures and found out if I stayed out of the "porn
sites" (I am human) I get very little spam. Where are you
hanging out???

Therefore I stay away from the porn magnets and try to help
other hams.

Wes,

I'm curious about your suggestion... Does this processor (or those like
it) cause problems? I'm wondering about this because I'm considering
adding some kind of compression to the audio chain of my old Yaesu
FTDX-560 since it has a fairly flat transmission audio response.

Questions asked to the group should be answered to the group. How else are the rest of us going to learn? That's what NG's are for...

>FWIW I will try to answer questions but if the reply bounces
>because of "your" antispam measures then I WILL NOT TRY
>AGAIN.

If someone is too lazy to come back to the NG to look for an answer, he doesn't deserve one by email anyway. But as I've said, the rest of us may benefit anyway. I haven't had *any* Spam in over a year, and I wouldn't trade that for all the personal email answers in China...

(SIGH!)

Yet ANOTHER "instant expert" who fails to READ and understand the related posts...

Jack, the problem, as posted in response to another, (yeah, you musta' MISSED it!) is with the *TRANSMITTED* AM audio - NOT the received AM signals - sure is a shame folk never assume the "complainer" just MIGHT actually know what he is doing or posting about...

The below info, as previously posted in this thread, might help...

=====
James Parsons <k5rov@earthlink.net> wrote in message news:384D6039.D3A40079@earthlink.net...
> Strange...I have tried this and have no such problem, except when my
> noise blanker is on.

James, the problem is on TRANSMITTED audio in the AM mode - NOT receive - and the noise blanker has NO effect on the transmitted signal...

BUT, if you have an outboard receiver available, tune it to the same frequency as your 746 - being careful to disconnect any antennas from the monitoring receiver, and using enough attenuation to provide a "normal" signal strength to the monitoring receiver. While transmitting in the AM mode on the 746, and speaking in a normal fashion, listen with headphones on the monitoring receiver for a "flutter", or similar effect superimposed on the transmitted audio at about 1/3-1/2 the level of the transmitted audio. This "flutter" will follow voice modulation, and stop completely when audio is not present. AS SOON AS *ANY* audio at any level is applied, the flutter will return - the effect is more noticable when the speech compressor is engaged, but is still present either way. You cannot detect the effect with the monitor built into the 746, only by an outboard receiver - either your own, or another station capable of monitoring you clearly enough to detect the effect. In my case, normal AM

contacts on 10 meters AM have NO problem hearing it. I won't go into detail as to all I have tried to isolate and eliminate the problem, but *trust me*, there IS a defect, and since it has surfaced in *3 separate* 746's, I pretty confident it is NOT an isolated condition!

AND, don't misunderstand me - I very much like my 746, and regardless of this AM problem, have NO intention of getting rid of it!
=====

NOW, Jack - carefully try the test method outlined above, THEN get back to me...

Gary - KJ6Q

Source record: 91745

When I recently installed a new radio in my Gran Marquis, I had alternator noise until I insulated the radio chassis from the auto chassis. I ran positive and negative wires direct from the battery to the radio. However, the radio chassis was grounded by way of the mounting bracket and this provided a negative path in addition to the wire going to the battery. When the radio mount was insulated via fiber washers the alternator noise ceased. Hope this helps.

5586. Re: Radio Shack new 10 meter rig - Question?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-18 00:00:00 UTC
From: bill <bwiese>
Message-ID: <01bf4902$82f9bb70$6c84c03f@bill_pc>
Source record: 91750

Well, the various radios are *close* but they also differ in
finals, etc. The HTX10 has a 2-transistor 30W final; other
radios w/similar faceplates seem to be single-transistor 15W
"wideband" CB rigs. There are of course several board
variations out there and I could've been seeing an older
board or one for the TRC485 CB rig.

Yes, they certainly are worth the $140 - $150. No, they are not
perfect - for example, no CTCSS/PL in FM mode; the Alinco DR-M03X
has this on xmit/receive, but it's a 10W FM-only rig.) Also the
synth steps in 1kHz increments, with a "clarifier" that is
essentially a combined RIT/XIT control that is not "separable".
Freq display does not reflect the clar. control setting and there
is no detent/mark for a "zero" position on this control.

No CW mode. Would've paid extra for this!

Sensitivity very good. Selectivity on SSB is what you'd
expect on a single-conversion rig w/o much fancy filtering.
AM/FM a bit better as these modes run in double conversion.

See some of my prev. postings on this and rec.radio.cb
newsgroups regarding this rig.

Ford 97 Explorer.

Kenwood TM-732 Dual band.

Powered directly from the battery.

antenna is a radio shack 2m 5/8 wave mounted on rear roof.

The problem is not severe. The symptoms are a wine emanating from the speaker. It also make it difficult to copy weak signals. It is worse with higher rpm's / vehicle speeds.

The problem is definitely alternator. I can disconnected the alternator with engine running and the symptoms subside. I tried a radio shack filter and also a .5 mfd capacitor installed across battery terminal. Neither helped.

I hear you. Been there and done that. Tired of getting bounced e-mails -- BUT, I am also tired of changing ISPs to get new e-mail accounts to avoid SPAM. Last month, I was getting 20 - 25 a day! Most of them, could be traced to newsgroup postings.

I no longer give out an email on this group -- it leaves you wide open for outrageous spammers -- internet gambling, win free vacations, and the most popular: make money on the internet.

I won't even mention the porno ones.

SIGH! -- wish we could be more open, but there are too many taking advantage of it.

cheers

From: framix@aol.com
Message-ID: <19991218024458.08244.00000307@ng-ba1.aol.com>
Source record: 91764

My friend, a ham had this problem and he had the fuel tank taken out and choke caps put at the fuel pump etc.......he still had noise. His final cure is a Toyota 4Runner...I kid you not. The Exploder is so full of wild noises that it makes a poor choice for Ham mobile.

5601. Re: Radio Shack new 10 meter rig - Question?

I just bought one, it is a nice little radio. Kinda cheesy if you are acustomed to better rigs (not sure how long the clicks are going to last on the VFO knob) but I was able to make many DX contacts on mine from Los Angeles today. For the money it is a nice little rig. I noticed that it hears really well also. It is sadly missing a PL for repeater usage. Hope this helps. Also finding one in Los Angeles was kinda hard....RS does not really push HAM stuff I guess. Happy Holidays!

>the TS-530s Kenwood? Thanks!

The major issue will probably be heater supply. Because it includes a
midpoint connection (pin 9, I think), the 12BY7/A heater can be run at
6.3 V or 12.6 V. The 7054/8077 heater is untapped and therefore cannot
be run at 6.3 V. So you'll have to check how the TS-530S heats its
12BY7A; if the supply is 12.6 V across pins 4 and 5, you're in
business.

Message-ID: <EoN64.180$WL6.36590@news1.atlantic.net>
Source record: 91779

Hi Jim: I have had some strange problems with my DJ-V5 as well. The high temprature feature cannot be turned on and off. If the radio is experienceing high temps for some reason, it will default to a lower power out. My problem was that the radio would not power up at all, BUT, if I removed the battery and put ot back on, it would power up. Finally, it just quit powering up at all and after a day of removing the battery I got so frustrated that i decided to take the radio apart and check the battery terminals inside. The radio has two boards that are connected through one connector. Once I unplugged this and replugged them together my problem has gone away. if your problem is persistant and you are under warranty, and I mean "under warranty", send it in and let them fix it. WARNING.......they go by the letter of the warranty so if you dod the mod, undo it and reset the radio before you send it in.....Jon KG4DIR

Source record: 91783

For Sale:

Alinco DJ-580 HT. It covers both 440 and 2 meters
(plus a lot more). It will cross band repeat, and I
understand that it will even receive cellular phone,
although I have not tried that myself. Power output
is up to 5 Watts, although it has 3 different levels of
power settings, so you can save the battery, if you
want. It looks and works almost like new. I thought I
would use a dual bander, but find no 440 stuff around
here that I can hit with an HT. It includes a battery
pack, drop in charger, rubber duck antenna, and the
manual. $225, plus shipping from Florida.

Thanks.

Hi,
The best i have found is the Sangean ATS909 it works good on all bands an is portable and it has a tone switch abd it uses AA batterys and cost around $260 dollars and pull in SSB real well, you have to go to a Drake SW8 or a Kenwood TS570D to beat it and there a Lotttttttttttt
more Money. I have owned all three and thats the story from my chair. Hope this helps.

I'm thinking of purchasing this rig. Read the reviews in QST, but would likr your opinion, after a year's use.

I spend most of my time on 40CW. Does it have a decent recvr? What is your overall opinion?

As space is a consideration, I might go with the IC 706 or FT 100, as they are all in the same general price range.

I have both, don't use them for CW but the ICOM is a brighter sounding radio because it is built for a mobile the Kenwood can be used for both but works better as a base. Both are great radios. Don't have any input on the FT100 .

Check out Passport to World Band Radio for portable reviews. They give honest info. But the small portables are built to SWL listener (by this, I assume you mean casual) standards, and there are compromises. But some are pretty good. The upper Sangean models are good value, especially when on sale at RS, and work decently. Remember that SSB is not a prime use for consumer grade small portables. The ones that are very good for SSB tend to be larger. As mentioned by another, the ATS-909 is actually quite good, I think even better than the PTWBR review would suggest (they don't consider price when rating). The QC is much better than the small Grundigs, and the price is much less than the comparable performance Sonys. It's very hard to test in a store, you have to get it home, so you need to buy from somewhere that has a good return/exchange policy. These small portables are almost impossible to get fixed properly if they break, so factory QC and ruggedness counts a lot. Regards.

RT is apparently using "destructive copy protection" where a sector of the original disk is unformatted and the software searches for that condition before accepting as original. This will rule out the image file being used to install from the laptop's hard drive.... The sharing across the network of the floppy sounds like the best deal going, unless RT systems put a block on accepting a redirected source.

If the ADMS-x software functioned as well as the copy protection, it would be nice.....

My best guess is that they use a check for a specific block. I have
used total disk copy programs like the old game hack programs with
reasonable success to archive the floppy. What is a real PITA is if
you defrag the hard disk you can disable the program.

Not withstanding what some west coast wags say the "E" version does
have some signifigant warts. I agree if RT spent as much effort on the

core code as they spend on copy protection it would be a truly great
piece of software.

>
> Bill K9KZ

Hi Bill,

MVT-9000 work quite well in HF band (when remember fact, its scanner) if
you use enough "small" antenna to avoid front end overload.
or use adjustable attenuator (can be found in TV shop's) or fixed
6db/9db attenuator... that attenuate incoming signals enough to get it
in AGC working area...
Also somekind preselector made big difference...

i've use it as portable HF receiver and it work for me in that use...

Feel free to ask more!

Mika

From: Dick Flanagan <dick@libelle.com>
Message-ID: <83j8ge01b5n@news2.newsguy.com>
Source record: 91603

In article <ylZ64.37620$43.43726@dfw-read.news.verio.net> , "Clif Holland" <avvid@onramp.net> wrote:
With all due respect, Clif, going to any web site, porn or otherwise, does not automatically give them your e-mail address. If gives them your site domain address, but that, by itself, is not enough for them to ascertain your e-mail address.

The addresses come from these newsgroups, chat rooms and various e-mail reflectors. There are automated "web crawlers" that do nothing but scan all these various message bases and extract all text of the form "something @ something dot something." These are then collected, sorted, cataloged and sold on CDs to junk mailers.

I've been on the Internet since the ARPA days and have been posting on Newsgroups since 1980, all without any of these annoying anti-spam measures. I get a fair amount of junk mail, between two and five per day, but they are all obvious by their titles what they are and it takes me about twenty seconds a day to simply delete them all without bothering to read them.

Interestingly enough, while I do get the occasional porn mailing, most of mine are of the business/product category. That is probably because I've never posted a message in any porn-related or "guy" newsgroups, chat rooms or reflectors. I imagine if I did, the sleeze content of my mailbox would take a considerable jump.

By the way, the only way the spammers know if your address is good or not, if it's read by a real human or just bounced or deleted, is if they receive a response from it. Asking them to "remove" you from their list is giving them just that kind of information and will ensure you stay on their list for-ev-er! Your address then goes onto a "verified good" list that they can then charge more for.

The best way to treat spam is to ignore it. Do with it just what you do with the mailbox junk you get. Throw it away and ignore it until such time as laws and technology catch up with each other and the medium become controllable.

73, Dick

PS: I never respond to someone with a no-spam address, either.

PPS: As for the anonymous mailers, they are just as bad as the spammers. As Oscar Wilde said a long time ago, "It's amazing what a man will say when he's wearing a mask." The power to publically proclaim whatever you want while "wearing a mask" is a power that many abuse.

Yes, the tape will work fine until it rains. I like the solid mechanical solution plus the extended warrenty that Pro Am offers as a superior solution at a far lower price. 5 bands for $59 compared to $19 each for the Hamsticks is a no brainer.

I have a Standard 168A 2 meter ht, exceptionally clean, bought in August of this year. Seldom used, has two batteries, manual, charger, antenna. Paid $200.00, asking $150.00 incl shipping.
OR
Will consider a swap for clean working vintage general coverage receivers-ie, Hammarlund, National, or what have you!

Since you've asked, I'm happy tell you and I hope your interest is genuine. A number of Harley riding people from the Pacific Northwest area had been chatting in the Harley newsgroup just as folks do in any group. Since our interest includes riding as well as talking about Harleys some of us got together IRL, rather like Ham meets. We decided we had enough friendship and common interests that we'd form a loose-knit club and call it the Brotherhood of the Slug - it alliterates well to BS which is a cardinal component to any IRL meetings we have. To become a member you have to meet up with another member on a ride and we encourage growth and friendship in this way. You can discover more about this nefarious group at http://www.halcyon.com/dpeterso. Many of us are Boeing engineers (me, frinstance), some are hams, others are gearheads for various companies around the country. We've traveled across the country and the group now includes members from Sweden, Scotland, England, Canada, and all across the US.

Eddie Kieger was a software developer in Palo Alto at the time he crashed his Harley (story at http://eddiekieger.com). If you follow the links at the eddiekieger.com site you'll discover the goodness that can be found when you have a lot of friends in the Internet community. All the information about the Charitable Trust can be presented to anyone who wishes a copy. All items available on the auction site are donated by fellow bikers or people who are interested in helping. That includes just about everyone in the rec.motorcycles.harley newsgroup, but many folks who are not even involved in usenet.

The auction I highlighted previously (http://eddiekieger.com/~dkp/cgi-bin/ek3auction.cgi?ConsumerElec&946150248) is an excellent starter set for a beginning ham or electronics enthusiast, by the way, and at less than $30.00 right now is a fantastic bargain - take a look. Personally, I'd hoped it would bring in more than that (I'm not the donor, I run the auction site) because all proceeds go directly to the charitable trust fund. Operating costs for the support activities are donated as well.

Bill

I use an old Yaesu FRT-7700 passive tuner (ATU) between the antenna and the MVT 9000. You can peak the signals up on the band of interest and apply up to 60db of attenuation. Using this I can hook up to just about any antenna without worrying about overloading the set.
These tuners are frequently found at radio rallies and junk sales and after fitting bnc plugs to the leads will work with just about any scanner. Probably cost about 20 GBP.

There's a hamfest in Gainesville, Florida on January the 7th, Bob.

There are some great places to see, but many Test Equipment places listed. They've got SOME test gear at SKYCRAFT in Orlando, but the prices are VERY steep there.

You can check all the other places listed at:

http://www.geocities.com/CapeCanaveral/Hall/8701/mega/boatanch.htm

Look at the Alphabetical listing as well as the listing BY STATE at the bottom.

Cheers

5646. Santec HT accessories FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-19 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <aQa74.6708$Ye.402623@monger.newsread.com>
Source record: 91610

For Sale:

Any one have one of the Santec HTs and need accessories?

ST-5 BC desk charger. It also includes an adapter cable so
that the HT can be put in the desk charger and used that way,
using the desk charger as a stand. $ 50

Santec Speaker mic. This one has the weird 6 pin plug on it
as used on the Santec HT-1200 and ST-144, and also used by
Yaesu and, earlier, on the Wilson Mark II and Mark IV HTs.
Looks almost like new. $ 30

I found two of the real Bianchi (probably didn't spell that right)
leather cases. It should fit the Santec ST-144, HT-1200, and most of
the
other HTs that Santec made. It has its should strap included.
One is new and is $ 40. The other is used and is $20.

I also found a DC (cigarette lighter plug on the end) cord that is
used to power/charge the same Santec HTs. $ 5

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Hi Bob;

In Orlando, there is a place called Skylab, or, skytech, I
forget which. As we call it skyjunk for short. They have most anything
you could ask for, and more at reasonable prices. They have test
equipment also.
As to hamfests, i'm not sure. Are you looking for anything in
particular?

I was wondering if there were any benefits to co-phasing antennas in the vhf/uhf bands for mobile application. I know it is done in 10m some and causes some directivity. I was wondering if doing the same thing with say a 2m rig would help in mobile foxhunts?

The best way is to find a yaesu PA-6 adapter/charger. But the battery pack converter will work also. I use a PA-6 here. Running a full 12v to the radio it does 7 watts out. MK

> a no brainer.

With careful planning you can get by with less than that though. Many sticks can be used for other bands and have better performance to boot. Say using a 20 m stick on 40m with a 3 ft stinger at the top. So you have two bands right there with one stick, and an extra stinger carried. And the performance of the 20m stick and 3 ft stinger on 40m, will be much better than a 40m stick used on 40m. I have one 5 ft 10m stick that I converted to all band use. Added a large 80m coil in the center, and have various stingers for 20-10. Works all bands including warc, with bugcatcher performance on 40/80m. The best part? It was free from a junk pile. BTW, I use a 6ft 20m stick and 3 ft stinger on 40m. 9 ft total. Works as well as anything out there I think. I get loud reports from everyone I talk to. Seems to equal my bugcatcher for 40. Not too many lossy widings on the 20 stick compared to a 40 stick. All the windings on a normal 40/80 stick with a very short stinger will eat your lunch in losses. MK

5660. Alinco DJ-S11 performance?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-19 00:00:00 UTC
From: JG <jasong@cgocable.net>
Message-ID: <QFc74.199129$5r2.503713@tor-nn1.netcom.ca>
Source record: 91624

The local ham shop has a surplus of the Alinco DJ-S11 portables and they seem to be a good "starter" rig but one of my major reasons for wanting to get it was because of it's small size, similar to a pager, as well as the fold-down antenna, which brings me to my concern: How does the radio perform when then antenna is folded down and the radio
is clip to your belt? Our local repeater is fairly strong to begin with and I don't think I will
have any problems but I wanted to hear from people who have had experience with these units with regards to their sensitivity and performance (battery life, durability, etc.)

I was also curious about the extended receive performance of this unit so that I could monitor the National Weather Service in the 160's. Does the sensitivity really drop off
or would it receive ok up there?

Any information regarding this rig would be welcome.

From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <385D69D8.E91@nidlink.com>
Source record: 91627

For Sale:

Radio Shack HTX-100 10 meter rig.

28- 29.999 SSB/CW rig. 25 watts pep output.

I bought this brand new and used it to test it out. Then I moved and packed it up. That is where it has been since.

Several years ago I bought a Kenwood TS-50S, so haven't had a need for this rig. I kept it so long because it is a really neat little rig.

Includes the mic, power cable, mounting bracket, mike clip, manual, all in the original box. Has only minor surface rubs from being the moving trip -- no scratches, mars, etc. Not quite mint, but definitely mint- or near new.

$125.00 shipped to ConUS. Will ship internationally for $125.00 plus actual cost of shipping.

Thanks es best thoughts of the season to all,

David, WA7ZYQ

Message-ID: <385D72DB.4C13@nidlink.com>
Source record: 91629

For Sale:

General Radio Company Impedance Bridge, Model 1650A

It measures resistance, capacitance and inductance.

It looks good, in the case (no cover), missing case screws. The manual is dated 1967 -- this in not WWII vintage.

I was told that it worked when I bought it, but have never gotten around to trying it (that's why I am selling it).

Has original manual plus condensed operating instructions. Manual has operating as well as service and maintenance info.

Tucker gets $450.00 for these refurbished.

I figure mine ought to be worth $75.00 to someone. Add UPS shipping from 83861.

Thanks and best thoughts of the season to all,

David, WA7ZYQ

Come visit Papadad's web page and check out some used ham gear.
Always looking to buy/sell/trade.

http://www.papadads.com

Currently looking for two UHF GE Mastr II transceivers. Must be
newer "painted handle" versions and work perfectly. Trades OK
if you see something you like on the swap page.

thanks,
Joe K7JOE

Wes,

Thanks for the added info - I've downloaded the pdf file and have
perused it. I'm still curious as to why the MFJ unit is considered so
poor. Can you enlighten me?

Source record: 91635

Generally speaking, this is not a good idea. A power supply normally has a different voltage current curve than the battery, so it will probably overcharge or undercharge the battery. A dedicated battery charger with automatic shutoff is the right tool for the job. If you use any makeshift battery charger, you will need to closely watch the voltage and current. The charge on a standard wet lead-acid cell can be measured using a hydrometer, available at any auto parts store.

5673. FS: Surplused Marine R-T, Linear Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-19 00:00:00 UTC
From: Dennis Peterson <dpeterso@halcyon.com>
Message-ID: <385D8E57.D11F4F52@halcyon.com>
Source record: 91637

I have a circa 1981 Scientific Radio SSB Marine Radio-Telephone, 1-KW Linear Amplifier, and Antenna Coupler for sale. All service manuals are available.

This is a continuous coverage (1.5-30 mHz) 10 channel crystal controlled system that was built for severe duty at sea. The tranceiver delivers 150 watts PEP (100w continous) to a 50 ohm load. It is capable of AME, CW, and FSK. Power finals are 3 6146A's.

The Linear is a servo-controlled unit running twin 3-500Z triodes and is capable of 1-KW keydown *output* into a 50 ohm load all day long.

The antenna coupler is also servo-tuned and will handle everything from a bent coat hanger to a long-wire at full power.

Tranceiver: SR-210MD - 8 x 16.5 x 17.5 inches, 50 lbs, 115/230 vac
Linear Amp: SR-110B - 20 x 22.5 x 50 inches, 260 lbs, 115/230 vac
Ant. Coupler: SR-650 - 24 x 20 x 10 inches, 73 lbs, 115/230 vac

This is a rather heavy-duty project package. Converting to amateur frequencies is a trivial thing. Cabling diagrams are included in the books. This system was working fine when it was decommisioned from a local tug boat fleet.

It's big, it's heavy - if you're not in the Pacific Northwest it is probably not worth the freight to get it to you.

Make an offer!

JJ, depending upon the battery and its state of charge, you will probably find it difficult to impossible to actually fully charge the battery with that supply. Charging a "12 volt" lead/acid battery usually requires a terminal voltage in the order of about 14.2 volts, and your supply is regulated at 13.8 volts.

That is enough to trickle charge the battery and keep it "topped off" once it has been charged, but if it has discharged down to 10.5 volts - defined as "fully discharged" - then you will find it tough to restore full charge.

I keep a large gel cell battery from a defunct UPS connected to an Astron all the time as an emergency backup and it stays charged. But, if I ever used it for a period of time and discharged it very much, I would have to use a conventional charger to get it restored to full charge.

By the way, you should always connect the battery to the supply through a fuse so that if the supply should crow-bar it will not short the battery and start a fire. Some folks also advise using a protective diode to prevent the battery from damaging the supply output stages should it be turned off with the battery still connected. The diode should "point" from the supply to the battery. That way charging current can flow to the battery but current from the battery cannot flow back into the supply.

Mark,

Suggest you look at the Pro Am type whips instead of the Hamstick brand. They are superior in that when you take them apart to put in your trunk or pack for a trip, the adjustment you make for minimum SWR will remain when put back together. Without a lenghty explaination, the Hamsticks depend on set screws to set the length of the upper 4' whip, while the Pro Am's have a ferrule that stays on the whip and will be at the same location when put back together.

The 10, 15, 20, 40, and 80 Pro Ams are commonly sold in a package of 5 for $59 to $69 at Hamfests. Look for Burke Electronics (from La Grange, IL-?) at the Wheaton Hamfest or I think they're still sold at the Amateur Radio Toy Store in Wheaton, IL. You can get the 12M and 17M for $16 or so which are sold as separates. A number of friends have purchased them at the $59 price for all five in the last few years from Burke. AES does not carry the special 5-pack and I don't think HRO does either.

I've used these antennas for years both locally and when traveling by putting them in a PVC carrying tube and they have been great. They even carry a warrenty of 4 or 5 years now.

Good Luck

A small piece of tape on the Hamstick's stinger will tell you where position
it when you tighten the set screws. Low tech, but it works...

5696. Yaesu FT101ZD display problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-19 00:00:00 UTC
From: Geoff <vk4xuk@cairns.net.au>
Message-ID: <385ccd39_2@news.ausmail.com>
Source record: 91662

I have an FT101ZD which has recently developed a fault in the digital counter display.

The left hand digit of the display is zero instead of 2 for the 15 and 10 Metre bands.

For example: 28.150 MHz is displayed as 08.150.0 instead of 28.150.0

Anyone have any idea what the problem could be?

Geoff, VK4XUK.

Message-ID: <uW574.10434$7Q3.62258@news4.atl>
Source record: 91667

For sale, the DX-440 AM/FM Direct Entry Communication Receiver with SSB and digital read-out. While this portable receiver operates on 6 "D" batteries, I also have the optional AC power supply..... It tunes from 150 to 29999 kHz and has the 87.5 to 108 MHz FM broadcast band as well. And you can tune in your favorite ham operator by using the SSB mode. Features include scanning and storage of 9 different frequencies in memory.

A picture of the unit is at: http://sites.netscape.net/cvaughn2

Priced to sell, $85 and you ship.

Charlie

Curt,

Not trying to toot my own horn, but if you go to:

www.azstarnet.com/~n7ws/s_proc.pdf

you can read an article I wrote some years ago on speech processing.

Particularly valuable are the references cited. If you review them, then you
will have much more insight on the subject.

73,

Wes

Phil, I have an Amp Supply lk500NTC amp that I would be interested in trading for the 761.
It uses 2 ea. 3-500z tubes. It is one of the last made by AMP INTERNATIONAL. It is no tune 10-160. 1200-1300 watts out. It was gone through by OMEGA electronics and not used since. It has ALO, QSK, etc. What is the serial number of the 761? Steve

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

For Sale or Trade:
Icom IC-730 HF mobile radio. in excellent condition and working perfect,

100 watts out on all bands. USB, LSB, CW, AM modes. Has RIT, RF speech processor, dual-digital VFO's, memories, Receive pre-amp, built-in ALC, RF out and SWR meter. Narrow/wide noise blanker, 10, 100, 1Khz tuning steps. Includes WARC bands. Also included is the HM-7 preaplified hand mike, original manual, power cord and box. Also included is a two month old Samlex SEC-1223 switching 23amp power supply which is super small and lightweight and has temperature controlled forced-air cooling. Includes original manual and box......Use the 730 mobile or base.
$425 + shipping Postal MO

Alinco DJ-180TH 2M 5 watt HT. Only about a month old, just bought from HRO. Includes NiCad battery,drop-in charger, manuals, and original boxes.
Included are some optional accessories: DC jack adapter, cigarette lighter
cable, BNC-to-SO239 adapter, Radio Shack 5/8 wave mag-mount car antenna.

RX coverage on HT: 130 to 170 MHz. All is just two months old.
$175 + shipping Postal MO.

Or trade all for Kenwood TS-520S plus $300 cash. Must be in very good condition and working perfect with manual and microphone.

Unexpected Medical bills to pay.

Email: W4UDX@juno.com

Thanks.....Mark

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

I looked at the PDF files on the processor, and it looks a lot like the Alpha Vomax processor. Alpha/Maximillian Associates would never supply me with the schematic, but I wonder how similar it is to yours? The old Vomax is a great unit for earlier rigs with no built-in processor. I have used one for years with a KWM-380 with excellent results.

Curt,

I have looked for my files on speech processing (a big bundle) and seem to have misplaced them for the moment. There was an article on "logarithmic" processing titled, "A Quasi-Logarithmic Analog Amplitude Limiter With Frequency Domain Processing", by Myers, in the August 1974 issue of QST. I don't have that at hand but I will try to retrieve it as time permits.

However, in the August 1976 QST "Technical Correspondence", Hal Collins, (author of one of my references) writes in part, under the title "SSB Speech Processing Revisited":

"The 'Quasi-Log' processor is a member of the af clipper family. It undoubtedly is a very well designed, effective band-limited af clipper. Remember, however, that harmonic distortion (HD) and resulting intermodulation (IM) products are generated and transmitted within the processor passband."

He goes on to say that the log clipper is a form of "soft" clipping; something that I suggest is undesirable.

As I recall the circuit, logarithmic processing (i.e. "clipping") is taking place over the full audio bandwidth. Consequentially, harmonics resulting from the clipping of lower frequency portions of the audio spectrum fall into the upper end of the passband. These harmonics then have the deleterious effects that I mention in my paper.

73,

Wes Stewart, N7WS

5740. =AD: Prep for 10 HAM/FCC tests. Download today!= .

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

Yes, my processor is similar in concept to the Vomax. Walter Schreuer, K1YZW, was the "inventor" of the Maximillian Associates device. Sometime ago, in another thread I was taken to task for having "copied" the Vomax. As you have found out, the design was a closely guarded secret and I didn't copy anything. I of course saw block diagrams of the device, as published by Schreuer, but the split-band approach dates to the thirties.

I gave credit (first paragraph, p.2) to Maximillian as well as Metzger, who came up with the phase reversing idea that I used to replace Schreuer's phase shift networks.

In subsequent correspondence, Schreuer, in defending his market, made some claims for superiority for his filter center frequency and Q selections. I rebutted these, successfully in my mind; however, he made a valid (although exaggerated) point about the distortion generated in my input compressor circuit.

Distortion that occurs prior to the bandsplitting is something to be avoided and the SL1626 wasn't a particularly low distortion device. As it turns out, the Plessey device wasn't easily obtainable either. I could buy them locally out of stock; however, no one else in the world could find them.

I later designed a compressor that was much lower distortion, had LED indicators for compression and clipping thresholds and included a background noise gate. This remains unpublished, however.

I still use mine on my old FT221 two-meter rig and before that on a Drake TR-7. I had many comments that the processor "made" the Drake. The Drake is gone, replaced by a Kenwood TS-870, which has --- a split-band speed processor built in, albeit one with only three bands instead of four.

5747. Re: Help needed, how does Syntor XX9000 get programmed?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-20 00:00:00 UTC
From: markandsandi@hotmail.com
Message-ID: <83lth1$a34$1@nnrp1.deja.com>
Source record: 91459

Hey Guys,
Hope you don't mind if I jump in your thread.
I just bought a syntor x9000 and I'm trying to fabricate a programming cable. Here is my idea:
Remove the plastic cover on the back of the Power/Data cable.
Find Pins 17,25,5,27,6, and 8. (As per batlabs schematic)
Solder 6 inch pieces of wire to the back of each pin.
Attach a DB25 connector to the appropriate wires(As per batlabs schematic)
Plug the db25 into the RIB and program away.
There would be a permanent programming cable attached to the power cable any time I wanted to make changes.
Here is the kicker. Does the real programming cable leave all the conductors hooked up? Is there something I'm missing?

Also, I only have a scan button on the top of the display head. Can I add a dtmf button and activate the keypad from the RSS? Are there any more neat functions I could add to the radio by installing the keypad button and adding the function in the RSS?
Thanks,
Marcus

For Sale or For Trade:

Late Yaseu FT-736R VHF/UHF all mode satellite ready base station transceiver. As new condition; very little use (came from the estate of a local physician). Comes with modules for 6M, 2M & 430-440Mhz, plus optional Sub audible Tone Squelch board (FTS-8), operating manual, service manual and MH-1 microphone.

Sell for $1,095, or consider trade for vintage ham gear such as Collins, Johnson, etc. (Particularly want Johnson 500 or late model Hallicrafters HT-32B and/or SX-115)

> your opinion, after a year's use.
>
> I spend most of my time on 40CW. Does it have a decent recvr? What is your
> overall opinion?

I have been using a TS-570D (not the G model) for the last 1.5
years. Most of my work has also been on 40 CW, and I have been quite
pleased with the radio. The DSP does a great job of muting the
background hash in the signal, and the ability to vary shape of the DSP
skirt helps a lot in tuning out the broadcast signals that adorn the band
every night.

I have one, bought it a few months ago as a backup rig for my Icom 737.
I like it so much, I operate with him most of the time.
When I got it I was realy looking for a IC 751A, that averages the same price and has a few more items (cw filter & cw electronic keyer and a few more memories), but the 745 works very well. A great rig.

Source record: 91472

Hi Kevin,

If you need to replace the batteries in your pack you might want to consider using NiMH instead of NiCD. They're lighter and have more power than NiCDs. Try this page...

http://www.thomas-distributing.com/batteries.htm

They have a nice NiMH AA cell with tabs rated at 1350mA for a little over $2 per cell, depending on how many you buy. I just order ten of them to rebuild the pack in my old laptop.

Hope this helps.

I have used a 10 amp supply to charge my battery string for the last 5 years with no ill effects. Just run a pair of leads from your Astron to your batteries. I am using Gel cells and whether or not that makes a difference I don't know but it does work just fine.

Thats the way I felt, until I started working CW since last August. I haven't done SSB ever since.
The way I learned (I still am...). First I tried the computer sending 20 wpm but with bigger spacing. when I started knowing the music, I asked a friend to have a few slow cw lessons on air. Then I started doing cw on air with the slower ones, and now I can copy abt 15 wpm, not too fast but get's you lots of interresting QSOs. So far ALL the stations I asked to send slower where vy patient and sent slow cw. great bunch of people...

The Heath rigs require a high-impedance mic. The original Heath mic was made by Electro-Voice, and E-V sold one just like it with their mark on it. An Astatic D-104 will work fine (without the amplifier), as will a Shure 444D and similar Shure mics. Various Turner mics will work too, such as the 254C. I've used an amplified Turner Plus Three CB-style mic on an HW-101, but it picked up too much background noise and generated complaints from the listeners. Avoide low-impedance dynamic mics; not a good match for a Heath rig. Electret condensors won't work either.

Hello All:

I am auctioning a Brand New Comet SBB-7NMO antenna. The antenna is a replacement for another one that was damaged. I have not even taken it out of the bag. It was shipped to me directly from NCG/Comet.
There is a $50.00 reserve.

Merry Christmas and Happy New Year!

5792. help programming Yaesu VX-10 HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-20 00:00:00 UTC
From: Mustang <bite@me.com>
Message-ID: <385EC858.B965E735@me.com>
Source record: 91554

I have a Yaesu FT50, and the software (1.0D) to program it.
Works fine. I have a deputy who has a Vertex VX-10 HT which looks
exactly like it. Pulling the battery it says it's made by Yaesu, so I
would
"assume" (no jokes please) that the internals should allow cloning or
reprogramming
with the cable, if you have software to program it with. Problem is,
this deputy
bought the radio WITHOUT any manual. Just the radio, charger and case.
Anyone know if it's possible to program this via the software and cable?

I can get it into clone mode, and it says "sending" but the FT-50
software
dosen't see it. It works on the FT50 no problem. I found a site which
has
a piece of software called EVE but the data file is in Hex and I don't
read it.
What I'm looking to do is reprogram this radio with the frequencies that

our Dept uses. The display dosen't show the freq readout, just the
ALPHA
readout. I can get into the programming mode, but this radio dosen't
have
the touchpad, just two buttons where it goes saying A and B
If the software can't program it, does anyone have any documentation on
how
to program this sucker??

thanks in advanced

Rusty

You MUST go to Skycraft Parts. It's a few miles north of the center of Orlando (About 30~45 minutes from Disneyworld). Thake I-4 north of the city to Fairbanks exit. The store is a few hundred yards from the exit, with a small drop tank mounted on a pole out front. It is the place that every tinkerer, engineer and radio operator wishes was in his neighborhood. They have everything electronic/mechanical, new and surplus. It's a must see. I get to the area a few times a year on business and a stop at Skycraft is manditory and always fit into the schedule.

Due to the massive e-mail response, I must post it here.
Simply, get a Rotron Comair 5 blade muffin fan of the same diameter, but NO MORE than 1-1/4" thick. 12vdc
The new fan will have the same bolt pattern(standard dimensions), but it is a 1/4" thicker than the original unit, and is a very, very tight fit, meaning the covers will be hard to bolt back on, but apply pressure and they will go.
Now, the hard part, it's up to you to find the new fan, I found mine in a electronics parts surplus store, for $12. Don't ask me to help you find one, I don't know where any more are. check with Rotron.

The output will be zilch, simply because the bandpass filtering is designed to reject any frequency above or below 160Mhz, or whatever the frequency range. Best to order a amp in kit form from Ramsey if you are watching your francs.

I would not use an Ameritron amp for RTTY work unless you hold the power down well below the maximum ratings. I had an AL-82 which smoked the 80/160 meter tank coil twice during contesting (admittedly a demanding mode). When I spoke to the designer about it, his response indicated that few people use RTTY on those bands, especially 160, and the amp is not designed for it. Since he also designed most if not all of Ameritron's other amps, I suspect the same design philosophy holds. I replaced the tank coil ($26.00), sold the AL-82 and got an Alpha 91b. Have been happy ever since. Alphas are made to take full power, no time limit operation and that's what RTTY demands.

5808. FT-530 Battery Help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-20 00:00:00 UTC
From: Skippy <wrangler@northnet.org>
Message-ID: <385D8400.287CB7C0@northnet.org>
Source record: 91641

Hello ,

I just bought a used Yaesu FT-530 with a bad battery . The radio functions fine using 12v dc adapter . I've tried to charge the FNB-25 battery with NC-28B wall wart with negative results . Previous owner never used the radio or charged the battery regularly .

I'll try again to charge the battery but if I have to replace the battery would like to know which aftermarket battery to go with .

Any help greatly appreciated . Thanks es 73 . Kevin

Hi,
This Hy-gain transceiver was made by Matsushita electronics which is Panasonic in US brand and it is not a US made gear. They gave up ham radio business long time ago even in Japan. Most of the Japanese ham radio makers are losing money these days.

Hi,
You cannot simply change the AM mode to FM mode and the frequency range
does not allow easy modification. You had better off with cheap Radio
Shack weather frequency scanner.
Good luck.
K6hm

i'd appreciate it if you'd take it back out ;-)
i own a maggiore, the r-1 uhf sans controller.
i use an ff-800 controller.
the maggiore sounds better than anything i've used.
the rx is coolio too although one of my users did buy
an arr preamp to go on it.

300mw anywhere in town.

the local club bought a modified ge mastr 2 and when it worked it
was ok, but nowhere near imho what their new 2m r-1 sounds like =]

just my thoughts, i like it all....

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

You should know that the cheap supply of
Russian-made Svetlana 811A tubes is drying
up quickly. They are no longer available
from the manufacturer. That may impact
the effort to re-tube the amp inexpensively
in the future. That was one of the big
selling points of the 811A amp.

DO NOT REPLY TO ME!

My friend Greg, W8RCA is selling 3 of his receivers.

Collins 75S1 with 2.1 filter and manual $450 shipped
Hallicrafters SX101MKIII A with R46B speaker and manual $275 SHIPPED
Hallicrafters SX100 with R46B (mint) and manual $325 shipped

All receivers are in excellent working order. The SX100 was partially recapped and has been bench aligned. It is 8.5 out of 10.

The 75S1 is a tight feeling rx with nice audio on AM and SSB.

The SX101 is 10-80 m. and is a nice rx but doesnt have the original vfo knob.

DO NOT REPLY TO ME!!!!!!!!!

Greg's phone number is:
734-878-2465 after 6 pm eastern

Hello Paul,
I just bought a 570D (G) abt 2 weeks ago....a real nice rig. I never paid any attention to the fan...but I do know it works....once when I was talking to my buddy here in town...we were on 10 FM....and after abt 10 or 15 mins of yakking...I noticed my fan come on...even commented to my buddy that the fan came on and must work..I felt the top of the radio...it was warm, but not hot.

So if you want to check yours, just get in a qso on FM....and talk for awhile...I'll bet it will come on.

I have been hearing rumors that Uniden is about ready
to release a replacement for the BC-245. This is why
the price has dropped so much in the last few months.

Anyone else heard anything?
Or of other new scanners that
will track trunked systems or
digital trunked systems?

Hi
the half deviation setting refers to bandwidth
eg. frs radio is 5 Kz, most vhf/uhf amateur is
10 Kz. As you point out that can be readily
changed. There is a pad that can be adjusted to turn up TX audio but be sure
you adjust the correct pad or it's back to Yaesu for ctcss calibration.

> appreciated.

It's possible to set limits on the VFO range, if the unit still has residual power to its memory (it has a small batery inside to keep this information) then these limits may still be in effect. Turn the unit on while holding down the MR button and it will reset the whole unit (including any limits).

Also, my TM-441A has a green wire on the control board (right by the tuning knob) that double it's frequency range when clipped. You may have a similar optimization or someone may have done it already. Of course, this is just for your information, I cannot recommend modifying your radio in any way.

-Michel

Curtis:
I use a Shure 4042 type microphone on my HW-101. It is a dynamic hand held microphone and works pretty well. My old desk microphone was dead when I got the radio (bad cartridge) and have been using the Shure ever since.

I would think that you could get by with just about any kind of dynamic microphone-even one from an old CB but you may want to consider something that gives good performance and makes you not sound like you are holding your nose.
The connections to the radio are quiet simple since there is only two pins on the connector, one for keying and the other for the audio. The grounds come back thru the shell.

Yes, they are kludges, Daniel.

But don't take offense; it's partly politics. My repeater will be owned by the town emergency management / ARES. They're expecting something that "looks" the part, as well as does the job. They'd even prefer something that's familiar to the local commercial radio shop for them to repair if necessary.

I've heard great thing about the 'ol Mastr II's. 73 Dave W1DAY

You may reset the VFO memory only by pressing the VFO key while pressing the Power switch to turn on the radio. This will leave any memory channels previously programmed.

My FNB-41 battery is slowly going away. I will need to buy a new one in the very next future. Fortunately, or unfortunately it depends on your point of view, there are a lot of manufacturers for these batteries: Maha, Mr Nicad, ADI-Premier, etc...

I am presently looking at the FNB-47 7.2v 1800 mAh. The prices range from 39,95 $ (ADI-Premier) to 49,95 $ (Mr NiCad) to 69.95$ (Maha). Are they all the same in term of quality ? Is there an advantage in paying 69,95 $ for a Maha battery when I can get the "same" battery for 30 $ less from ADI-Premier ?

Also, any of you guys know of a canadian manufacturer for these batteries ?

I think that's nothing but a rumor. Uniden most likely dropped the price of the BC245-XLT, on the heels of Radio Shack release their new GRE, PRO-92 scanner.

I have an AL811H (the 4 tube version) and am very happy with it. I do not run RTTY. The manual states that for FM, RTTY, Packet and AMTOR modes that "The plate current should be limited to 400ma Maximum. The grid current should be limited to 120ma and the amplifier tuned for peak output power with the drive reduced to hold the grid and plate currents be low the ratings given."
Note the normal limits are 450 ma Ip and 200ma Gp. This is going the limit output power considerably. If I were contemplating extensive use of RTTY I might look further.
Good luck and Seasons Greetings

Super rare Hygain 3750 HF rig with matching 3855 VFO. This is a full featured HF rig, 100W out, that is extremely rare. The VFO had not been out of the box until now. Works very well, good rcvr and great xmit audio. Here's the chance to own one of the rarest US rigs ever. Will trade for a nice HF rig or sell for good offer. 505-437-8658 or email.

For Auction: MFJ 1278 Multi-mode Data Controller (Packet, RTTY, CW,
FAX)

See the auction at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=221981939

This package includes:

- The MFJ-1278 multi-mode controller
- AC adapter power supply
- Owner's Manual (Includes troubleshooting, calibration, and schematics)
- 2 Microphone cables with 5-pin DIN male connectors
(one is wired for a Kenwood TS-430S)
- MFJ Packet Starter Pack pamphlet
- Fast-Start manual (not pictured)
- 3.5" floppy of the MFJCOMM 3.0 software. This is the DOS program
that communicates with the unit.

The 1278 will operate the following modes:

- VHF packet
- HF packet
- Baudot
- AMTOR
- ASCII
- CW
- Weather Fax

I will try to answer any questions, please don't hesitate to e-mail me.

I have a Grundig YB400 and a Sony SW7600G along with a Sangean ATS818. Dollar for dollar the Sangean 818 is my favorite. It's twice a large, the speaker is twice as large and sounds much better. It appears to be as sensitive as either the Grundig or Sony. And it comes with an AC power supply. Not to mention your savings over the others, as it sells for $139.00 at Universal radio in Reynoldsburg, Ohio. You can see it at their web site at WWW.UNIVERSAL-RADIO.COM I really think people pay too much now days for bells and whistles on equipment such as hundreds of memory presets. The 818 has plenty of features, besides I sometimes think we forget that the primary function of a receiver is to receive well. Good Luck with whatever you decide. Bill KA8ZYZ

The "real" polaris cable I have seems to have all the condutors in
place. Radio and siren work with cable in line. The little buttons
(DTMF etc) pop in the front housing. The electrical switch is in place
so you could add the buttons and enable via RSS. The keypad will you
DTMF and the ability to go directly to a mode. Hold home button down,
type in mode number and hit home. If you add a siren you can use the
keypad to control wail,yelp, etc.

I put together an RS-232 converter the other day for programming the
memories in a Kenwood V7A and G707 (using the free software). If
you're too cheap to by the PG4S cable (like me), have a look at

http://www4.ncsu.edu/~dbhopper/v7a/v7a_adapt.html

Merry Christmas and all that,
Dan, KU4NF

5893. FS: Fluke 8060A 4-1/4 digit true RMS Digital Multimeter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-21 00:00:00 UTC
From: Sean Borman <sborman@watt.lisa.nd.edu>
Message-ID: <Pine.SOL.4.10.9912210215510.27013-100000@watt.lisa.nd.edu>
Source record: 91587
Cross-posted to: misc.industry.electronics.marketplace,sci.electronics.equipment,rec.radio.swap,rec.video.marketplace,rec.radio.amateur.equipment,rec.ham-radio.swap

For sale : Two Fluke 8060A 4-1/2 Digit True RMS Handheld
Digital Multimeters with soft cases and probes
Condition : Excellent, functioning perfectly.
Reason : No longer using meters - let them find a new owner

Retail : $479 per meter, $22 per case
Asking : $225 (single meter with case) or
$420 (both, with cases)

Shipping within contiguous 48 states included.

Please contact
Sean Borman
(s b o r m a n @ n d . e d u)

FEATURES:

True-rms AC voltage and current measurement
Volts to 100 kHz [8060A]
Fast audible-visual continuity tests
Relative Reference (offset): When measuring ohms with the
8060A or 8062A, the relative reference function displays only
the difference between a stored reference value and a
measured value, even if the range was changed between
readings. Relative mode works in all functions and ranges.
Low-power ohms on all resistance ranges, for in-circuit
resistor tests
Constant-current diode test mode
Resistance and conductance measurements
Frequency and dB measurements (8060A). The 8060A's direct
dB readout (referenced to 600Ohms) easily and accurately
measures the dB gain or loss of amplifiers, filters or
attenuators.
Digital Display/Counts: 20000
Resistance to 300 MM

Hello,

Has anyone tried modifying the NOAA weather frequencies in CB radios?
I'm not particularly concerned with specific models, but I do think it
would be cool to change the frequencies to RX other services. Thanks
for any input.

Paul

The only reason spam isn't *completely* out of control is that there are
people who do NOT just ignore it. If everybody simply deleted their spam,
the spammers would be delighted - there would be a river of electronic
offal such as you've never seen! Please take the time to educate yourself
about spam and spam prevention:

http://spam.abuse.net

Whether you choose to fight spam or ignore it is your choice, but please
do not council everyone else to ignore it. It won't go away.

Bruce,

You probably know this but just in case... There are schematics for the HP-23 and HP-23B on the BAMA site run on our behalf by Ken Grimm. I know no HP-23A but they may provide insight. I have a manual for the PS-23 but just looked and the schematic is missing.

You can get to the Heathkit directory through you browser by going to ftp://bama.sbc.edu/downloads/heath

Good troubleshooting, always lots of fun,

5904. Which would you choose: FT-100 or IC-706MK2G

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-22 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38610846$4$vtanpl$mr2ice@news.uga.edu>
Source record: 91348

Which rig would you choose mainly for portable operation if you have to make a decision in two days? 706MK2G has better ergonomics and may be a better designed rig, but FT-100 seems to have better transmit (SSB TX equalizer and better BK in CW), and stronger but less sensitive receiver.

FT-100 is $240 cheaper.

Would you expect that the current production FT-100 is modified with respect to an earlier model reviewed this year by QST?

Now this is starting to get really funny. Two people claiming intellectual superiority by their
lack of ability to comprehend a silly pun.

CLUE: (for those without one)
"Doppler effect" was _intentionally_ mispelled by changing a single letter to make a bogus term
"Dopeler effect". This is a pun using the word "dope" which has one meaning defined as a "very
stupid person", which fits the context of the bogus definition.

The pun really isn't all that funny until people respond with "spelling error". Of course, if
people are just pretending (trolling) to be under the "dopeler effect", then the joke is on me :-)

May we all experience many pleasant jokes during the holidays.

Message-ID: <Bd784.8058$Ye.473855@monger.newsread.com>
Source record: 91352

For sale:

AEA PK-64. This unit is made to plug into a Commodore 64
computer. If you have a C-64 setting around, this will get you
on RTTY, packet, CW, ASCII, etc. This one has the "HF Modem"
with the bar graph included in it. $ 50

Hal CT-2200 / KB-2100. This combination will drive a composite
video monitor, and do just about any digital thing a person can
think of, other than packet. It has baudot RTTY, ASCII, CW, etc.
It also has some of the best filtering built in to it that you can
find. It is a "stand alone" unit, in that you use it with a composite
monitor, and plug into your rig. No computer needed, as the
computer is already inside the unit. Of course, Hal shielded
it well, so you do not need to be concerned about computer
hash getting in to your receiver. Complete with original
manuals and original boxes. $ 400

I found some "patch panels" as used for RTTY, etc. These are
the standard 1/4 inch jacks, and are new. Each panel is about 8
inches long. I have some with 20 positions and some with 40.
The 40 position have two 20 position, one on top of the other.
Never been soldered to, as best I can tell. 20 position for $5;
40 position for $10.

Prices do not include shipping from Florida.

Thanks.

Bruce,

I have an original HP-23A manual. I'll scan the schematic and some other pertinent info and email it to you in JPG format. I'll try to scan the info tonight at home and email it to you form work tomorrow.

You wouldn't happen to have any HP-23 parts laying around, would you? I'm looking for a bottom cover, and perhaps a doghouse. I just got done rebuilding an HP-23B, but the covers were missing when I got it.

I've rebuilt many HP-23 supplies over the years, and I'd suggest you just replace the rectifier diodes, filter caps, and bleeder resistors in the +800 supply and be done with it. 1N4007 diodes work nicely and are dirt cheap. The filter caps are almost always bad or weak. The paralleled 100K Ohm bleeder resistors are silly. Just use one 100K for each bleeder instead of paralleling them. This will save space and reduce heat inside the chassis. And use metal film type resistors if you can get them; they run cooler and hold their value better in the long term than carbon types, and they're smaller in size (2 Watters are the size of 1 Watt carbon jobs).

By the way... I'm parting out a virtually complete SB-102. Need any parts for yours? I have a CW filter, near-mint panel meter, knobs (including the CW filter lever knob!), switches, crystals, and so forth. It has a pretty nice front panel too. The LMO dial is cracked at "15" and "65" but still looks decent and is usable. It's better than the average used SB-line dial.

73 for now,
Dean / K5DH

Date: 1999-12-22 00:00:00 UTC
From: Ben Flauder <va3bsf@rac.ca>
Message-ID: <mOa84.773$QQ5.206@198.235.216.4>
Source record: 91367

I have a TS-450SAT and MC-60A mic. The other day I noticed a slight "crackle" noise coming from the mic as I inserted the mic connection back into the rig. The noise went away when the connector was totally inserted into the rig. I checked the connections as best as I could and did not see anything out of the ordinary.

I replaced the MC-60 with the MC-43S hand-mic. No crackle noise as it was inserted.

On air tests indicated nothing out of the ordinary either.

The mic was set in the "out" position for the amplifier (the switch on the bottom of the mic). When I moved it into the "in" position and re-connected the crackle noise went away. This operating position would be find except I tend to get RF in the audio if I leave the amplifier on.

Are these items common for this rig and mic combination? Or do I have a short somewhere in the MC-60?

I'd be curious to hear from other TS-450/MC-60A owners.

Thank you,

Ben - VA3BSF

From: Andrew Bachler <Andrew_Bachler@MSN.com>
Message-ID: <OiuLEFMT$GA.263@cpmsnbbsa02>
Source record: 91369

Apparently some earlier HF 2500 users complained of a high pitch sound from the blower. My amp has a resistor in series with the blower motor which slows the speed,eliminates the high pitch, and reduces the blower noise. I added a small toggle switch on the rear of the unit to bypass the resistor. This allows increased air flow during heavy duty cycles (SSTV, RTTY, etc.). I don't find the noise, in either switch position, objectionable.

I already use the Radio Shack universal charger. It is essentially the
same as the Maha so I've got this part covered. What else should I know
as far as the charging routine is concerned ?

And what would prompt one manufacturer to charge 30 $ more for the same
battery pack ?

Finally, Mr NiCad sells inserts for the FNB-41 pack. Has any of you guys
done this before i.e. swapping batteries in a pack ? I am a little
worried that I will be able to do it without completely destroying the
old pack's case...

Merry Christmas to you all

Source record: 91371

MC-60 A has poor RF insulation. The mic cable ground isn't even connected to the microphone ground. On some bands I have a problem with RF getting into the microphone, which disappears if the amplifier is turned off.

Ignacy, NO9E

I want to remove and clean the clear front panel lens on an Ft1000. It appears the plastic piece directly below the clear lens needs to come off to get at the clear lens. It is not obvious to me what the method is to remove this piece. It does not seem to be snapped into place, but may be glued. Would appreciate very much if someone can provide me some quidance as to how to get at the front lens.

Thanks,
Donn R Taylor dstaylor@minn.net

If you can still find some, use some glyptol. It is like a red high voltage varnish. Clean off the area where it is arcing. Hopefully there is no carbon track built up. Put on several layers. Let it dry between layers.

I have a commercial Vertex (Yaesu) VX-10 handheld. It dosen't have a keyboard,
just two buttons marked A and B.
The radio is "keylocked" as the icon on the display looks like a key.
I can reach the clone mode by the normal FT50 route which I have.
Obviously the ADMS software won't work with it, and the keypad from the FT50
has the connector plug in a different location.
I've tried the "eve" software and it seems to download the data, but it's in Hex
and it's been almost 18 years since I fooled with hexidecimal. Any help in programming this would DEEPLY be appreciated. I'm trying to program it
to the sheriff's dept frequency that we use here. I'm a once a week 911 operator,
and one of the deputies bought this radio used without a manual.

Thanks!
Rusty

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

I have a TS-570D (now a DG) and a 706MkII. The TS-570 is definitely a
more capable radio for CW; the DSP on NR2 setting is very effective for
CW. Plusses of the 706 series (and the FT-100) are small size for mobile
or travel and capability above HF.

I have the following radio for sale:

KE7NR's FT726R

This radio has the following items:

1. Owners Manual
2. Service Manual
3. 2m and 70cm Modules
4. Satellite Unit installed
5. Hand Mic with Dial Tone buttons
6. Built in switchable 2m and 430 preamps (ready for field day)
7. 1200 baud and 9600 baud satellite ready via din plugs
8. Split PTT line for 2m sequencer ready. (Has jumper for non sequencer operation)
9. 2m RX module has extra IF stage added for beter S/N ratio
10. Mods are documented and straight forward.

Either of these three NiMH packs will serve you well - providing you charge it properly. You must not use the same routine as your old NiCad pack to properly care for your NiMH pack.

I use several of the exact pack (FNB-47) and use the Maha MC-C777a Universal Charger/Conditioner. It will properly condition and charge either NiMH packs or NiCad packs from 4.8-to-12VDC. It retails for about fifty bucks US.

>trying to understand the fast, abbreviated exchanges.
>
>So - opinions, please - is it really possible to learn cw by *starting* to
>listen at high speed?

Yes. The method used is called the "Koch" or "Koch Farnsworth" method. The idea
is that you start out by listening to just a few characters sent at relatively
high speed (18-22 wpm). At first they are sent with extra space between
characters (that's the Farnsworth part). You practice on just the few
characters until you are doing better than 90-95% copy. Then the character
spacing is reduced. When you can do 90-95% at normal character spacing, anohter
character or two is added. Process repeats until you run out of characters.

> would that have gotten me beyond my current block?

Maybe, but there are other ways.
>
Sounds to me like what you're doing is writing everything down. That works, but
it limits your copy speed to your writing speed.

Try just listening to code, and only writing down the important stuff. If the
other guy sends "UR RST HR 599 599" just write down 599. Try listening to CW
traffic nets and traffic handling - lots of good procedural stuff. Get into a
domestic contest (November Sweepstakes, Field Day) and write down only the
exchange. (The pileups aren't as bad in domestic contests.)

Most of all, use CW for everything you can. Being a good CW op involves many
different skills - sending, writing it down, copying in your head, digging one
out of the QRM and QRN, matching speed and repitition to conditions, etc.

I still remember, many many Field Days ago, watching one of the OTs work them
one after another on 40 meters on Saturday night. He'd pull solid QSOs out of
what sounded like a hopelessly jumbled mess to my inexperienced ears - and he

had the sharp filter in, too.

"How's it going?" I asked.

"Not bad, kid" said the OT. "Might be pretty fair later on."

(He worked another one during this little conversation.)

"Which one are you copying?" I asked.

"All three of them, kid," he grumbled, as if the answer should have been obvious. "Hey, how about getting me another beer?"

"Sure thing!" I replied. And went and got him one.

I understand the Alinco DJ-S41 can be easily modified for FRS frequency coverage. One feature you will not have will be the CTCSS tones. The DJ has encode capability only, no decode.

Hi Jason,

What a timely question!!

I just finished programming up my dual band Icom IC-32AT for a FRS channel, turned the computer on and saw your posting. I have four Motorola Talk-A-Bouts and thought I'd put a FRS channel in the Icom's memory to monitor the kids. The IC-32AT I have has had the diodes modified to allow out of band operation and I reset the CPU to allow 12.5KHz steps to hit the FRS splits. I didn't want to put all 14 in memory since this radio only has 20 total memory channels. I think a good way to go would be to program in 462.5625 and 467.5625 which are the first channels of group #'s 1-7 and #'s 8-14. That way you could easily step up and down with the VFO to cover all 14.

Most of the current and past dual band and UHF Ham portables will cover the FRS range on receive and even transmit with mods, although I've only had experience with Icom's. There are published mods and web sites that cover many models.

5971. ICOM 706MK2 smoke!!!

Hello Michael,

I had the same thing go on my ICOM 706MKII. Mine went after "I" installed the UT-106 DSP into the radio. I had to pull the "Wide White Ribbon Jumper" off the board to get the DSP installed. I guess when putting the ribbon jumper back together with the circuit board, something went wrong. I my rig started acting weird and the power meter showed full tilt without even having the mic in my hand, then the sweet smoke smell filled my car.... I was sick to my stomach...!

Long story short, I sent the rig to ICOM under warranty, yes under warranty and they replaced the main CPU and a bunch of other items that I can't recall right now... all free under warranty...boy was I lucky!

rig works wonderful ever since...but I don't play with the radio any more...leave that to the pros...

>
Just bear in mind that while many of the Amateur HT's that can be
modified for out of band transmit can easily be programmed for the FRS
frequencies, it is a violation of FCC rules. These radios are not type
accepted for that purpose.

If you can live with that, then also bear in mind that the amateur HT's
have a transmit deviation of +/- 5khz and many of them a little "hotter"
than that. The FRS radios use a maximum of 2.5khz deviation, so there
is a good chance your amateur transmitter is going to overdeviate the
FRS receiver and there may be some significant voice clipping.

I just got my ham ticket a few months ago, but I got started in radio 33 years ago as an SWL. Back then I used a receiver with an analog dial, of course. I'm particularly fond of listening to HF utility stations, especially military. I was never particularly fond of trying to tune an analog dial to the exact frequency of a utility station that was not actually transmitting at the time I was parking the receiver there in the hopes of catching the station I was after when it did finally begin transmitting.

The digital dial, to me, was a godsend. If I want to monitor the USCG's primary daytime safety of flight channel, I park the rig on 8983.0 Khz. When someone starts transmitting there, I hear it, period. *Trust* the digital dial? I'd hate to have to be *without* a digital dial again!

>It took the same 1983-1993 period for most of the tube final rigs to
>head into the closet where they belong, with the Polaroid cameras.

I managed to catch two hamfests this summer, and saw a lot of tube radios for sale, many of them Heathkits. A lot of them were sold. I myself almost bought a Heathkit 6m AM/SSM rig. It would have gotten me on 6m for a lot less money than I'd have to spend to get there with available alternatives - the guy only wanted $150 for it. If I get another chance at such a rig at another ham fest and happen to have an extra $150 on me, that radio is coming home with me. It's a huge boat anchor and I'll have to rearrange half my shack to fit it in here, but it's coming home with me and will become the centerpiece of my shack. Rest assured I will not place asterisks in my logbook next to the QSOs that are made with it rather than a solid state rig. :-)

>Now, I purchased a DSP radio... after listening to al the bitching over
>the past 4 years or more. I think it's great... oh no, it'd be much
>better to listen to all the garbage my neighbor's computer collection
>generates. It'd be better to isten to white noise than have to
>caerefully adjust the dsp to eliminate that noise and it's associated

>fatigue.

I bought an add-on DPS unit this past summer for one of my SWL receivers. The noise reduction definitely results in my leaving the radio on a quiet frequency for a lot longer than I used to do without noise reduction. However, the thing I like most about the DSP box that I have is that I do a lot of listening to SSB signals in the maritime bands, where there is also a lot of RTTY present. There's nothing quite like having a pair of manually tunable notch filters at your fingertips so that when there is RTTY in your SSB signal, you notch the mark and space tones and go ahead and copy your SSB stations. The DSP cost me as much as the receiver did, but worth every penny.

>Of course, if you're a fart who doesn't read the instructions, you'll
>adjust the audio on a dsp rig into oblivion... but the almost universal
>bitching I'm hearing takes me back a decade to the frequency obsession
>and the "transistors can't take the SWR, I don't trust the fold-back
>circuitry" obsession.

Well, I don't know where this bitching is coming from, I'm only subscribed to one of the three NGs you posted your message to and I haven't heard much complaining in rrap about technological advances in the ARS and in fact most people in this newsgroup seem to support such advances. However....

I've never read the entire manual to my DSP box. I read enough of it to make sure I'd connect a proper power source without blowing the thing up in my face, and I read the part on how to save the settings to one of the memories so that the settings could be recalled easily. I didn't need a manual for the rest, my ears are sufficient to tell me when I've gone too far with the noise reduction and lost so much audio that I can't copy the station I'm listening to anymore, and my ears also were sufficient to tell me that the dual notch filters can also be adjusted so that they act as either: adjustable high reject/low reject filter, band-stop filter, band-pass filter, or even two frequency-independent variable band-pass filters in parallel.

Now naturally I had some idea of what the DSP controls were supposed to accomplish before I started playing with the unit - that's why I bought it in the first place. However, I would expect that anyone complaining about DSP would at least read enough of the manuals for their radios to learn which button to push to turn the DSP off if they are that irritated by it. No law says that just because you have it means that you must use it. There's a button on my DSP unit that bypasses DSP, usually mine's bypassed. Until, that is, there is RTTY in my SSB signal, or a het on an AM signal I want to listen to, or buzzing sounds caused my by neighbor's computer (or my own!), or something else that would increase my enjoyment of the hobby by going away. Then I'll punch that DSP button and remove the unwanted noise.

Anybody who'd rather try to dig an SSB signal out of QRM from a RTTY station a few KHz up is welcome to go right ahead and do so. Me, I'll

notch the RTTY tones, put my feet up, and enjoy the hassle-free copy, because I do radio for enjoyment. If I want something to bitch about, I'll read a newspaper, or remove Dick Carroll from my kill file. :-)

A well reasoned reply. How refreshing.

The only thing I might say is that as you spent most of the past 3 decades listening, you are different. 75 percent of hams, you know, are more concerned with endlessly flapping their gums.

Thus, they never learn how to use the tools their radios give them properly, such as DSP.

We are a distinct minority.

You can't work them if you don't hear them.

Message-ID: <83u1plbgg1@news1.Radix.Net>
Source record: 91143

Hello Walter and the NG:

I have the Clearspeech speaker, and I love it.

My setup:
I have an Alinco DX-70TH with a Highsierra HS-1500 screwdriver antenna in my 1995 Ford F-250. As you may know the DX-70 does not have an internal DSP (IF or otherwise) and noise can be a problem, I have tried using a Timewave DSP-x for mobile purpose, but it was a bit tiring to adjust/readjust it.

Upon installing the Clearspeach speaker, my noise problems stopped. I could not believe it, but it works. No, it is not as good as a Timewave DSP-599zx or an intergrated IF DSP, but it works wonders mobile.

It can work with CW, but it tends to be a bit "choppy", although I don't work mobile CW.

It IS simple, On or Off. Noise, no noise. Simple.

My only "complaint", is that if you do not have power applied to the speaker, you will have NO audio output. It is this situation whether the switch is "ON" or "OFF". But, I just wired it directly and have had no problems.

The audio is full, but at higher volume levels I have experienced some "rattling" in the speaker. There are some simple methods for resolving this as well.

It works for me.

Cheers,

Cliff Owen

Remove the front cover by un-doing the mic plug nut etc....careful with the plastic clips on top and bottom. Unscrew the from panel with the LCD on it and lift out of the small SMD connector between the CPU board and front cover. Spray some switch cleaning fluid onto the SMD connector and replace LCD panel.
I have seen this happen allot with the TM-241. Dust seems to be the problem. My TM-251 is also beginning to show signs of a clean out now.
Good luck and Merry Christmas.

Hello Chas:

A friend of mine had an 1998 F-150 (V6), same thing. We took a piece of RG-58, stripped one end back and made a small dipole, connected the other end to the radio and started looking. What we finally found was the the exhaust pipe was radiating the ignition sparks. A simple fix was to ground and bond the pipe as close to both ends as possible.

Hopefully this helps.

Cheers,

The display connector. It is a very common problem(fixed 2 today).
Resolder the connector on the radio side. The display side is usually
OK.

Send it back to YEASU and have them repair it. Have talked with several hams that have had problems with the radio. I have had one for about 2 years now without any problems. Seems the FT8100R model is the one that has the strange power on or staying on problems.

Source record: 91157

I want to thank everyone who posted to my questions about Ameritron Amps, for those that would like to know what the responses were, I will try to summarize them:

I received 8 responses, 5 by direct E-mail and 3 to the NG

The fellows using Ameritron Amps for SSB, said they worked fine with no problem, but the rtty boys said I should move up to bigger and better rigs such as the Alpha or the Drake etc....

I was hoping I could get by with an amp that could run on 120vac/15amp max, so I wouldnt have to re-wire the spare bedroom upstairs where the shack is, oh well, I guess if I find a 811 cheap enough I'll try it and just de-tune....

Merry Xmas to all
Paul **NC8T**

5997. Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

6002. 2m+ HT for Out of Band TX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: Vogt <vogt@oro.net>
Message-ID: <3862D5F0.4A895927@oro.net>
Source record: 91163

I am a contract firefighter and as such use Benidx/King high band HTs a lot if there is one available to use. Some of the people own their own Kings but they are very expensive. Around $700.

I know there are some amateur 2 meter radios that would almost fit the bill. Here are my requirements:

Must haves:
Dry Cell Battery Pack
Stand up charger for car available (ok if extra)
Fast scan
Fast priority lookback
At least 10 channels in a bank
Oddball splits
Transmits on priority channel even when squelch is open on another channel
(This is a life safety requirement. It has to be able to talk to someone else on the tactical channel no matter what other traffic is going)
Obviously, a way to modify to transmit out of band and have some decent power...

Like to have:
A way to assign numbers to tones. In California there are standardized tones:
Tone 1 - 110.9
Tone 2 - 123.0
Tone 3 - 131.8
Tone 4 - 136.5
Tone 5 - 146.2
Tone 6 - 156.7
Tone 7 - 167.9
Tone 8 - 103.5

A way to switch banks so that I could leave my ham frequencies alone while all the other ones are constantly changing...

My buddy has a VX-5R and an FT-50 but he says these won't do the scan thing like I need. Plus the VX-5 is a piece of junk and he keeps having to send it back.

Thanks,
Birken - KE6DLT

6003. Re: Any HT with FRS capacity?

Newsgroup: rec.radio.amateur.equipment

Yes, GMRS licenses are still being issued. Fill out 2 simple forms, and pay a fee of approximately $85 and you can be on the air the same day with a temporary license. New licenses (both GMRS and HAM) are now being done under the new ULS (Universal Licensing System).

6004. Re: 2m+ HT for Out of Band TX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: Paul <pmartin@bright.net>
Message-ID: <3862F0C7.18E178B7@bright.net>
Source record: 91165

One thing to keep in mind is that most HTs intended for ham use are not FCC type accepted for use in the public service bands....but then what's the possibility of getting caught....probably not much.

6005. Question - DC Power for IC-T2A HT from a power supply?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <SjC84.4545$zh6.348177@ndnws01.ne.mediaone.net>
Source record: 91166

I have an ICOM T2A hand held that I bought used. It works fine off batteries, but I assumed that I could run it off the DC "wall-wart" power supply. When I read the instruction book, it claims that the power supply is for charging only. And it says that the unit must be off during charging.

This seems to mean that I can only run this HT off of battery power. Does anyone know if this is true? The radio comes on when it's plugged into the power supply (okay, so I read the instruction book AFTER plugging it in for awhile). Will plugging it in and using it hurt the radio?

I was really surprised by this and hope I've miss understood the instructions.

Source record: 91167

I should also point out that you can buy an FCC type accepted commercial UHF radio (hand held) which will operate legally on commercial, GMRS and UHF HAM frequencies for less than you can buy a HAM handheld. Yes, it is only a single band radio, but you can buy both a VHF and a UHF version for less than a new dual band HAM handheld, and be able to operate on the commercial frequencies legally (assuming you also have the applicable license). Cost of low-end commercial equipment is dropping, and it is fairly equivalent in performance to HAM equipment. There is only one commercial, type accepted dual band hand held, but it is fairly expensive.

Note that only the first 7 FRS frequencies are permitted for use on GMRS, and then only with a maximum 5 watt ERP.

I am looking for replacement dial scales for a Hallicrafters S-40 receiver?

Also the plastic dial covers on my receiver are warped and that is what caused the dial scale information to wear off. Are replacements available for these as well?

Is anyone aware of a replacement source for these parts?

Thanks, Don

6013. Re: Which would you choose: FT-100 or IC-706MK2G

Take a look at the QST reviews of each. Pay particular attention to the
receiver numbers regarding blocking and IMD. Seems to be an easy decision.
The 706 numbers are not good at all.

6015. FEDS RAID ELECTRONIC HOBBY VENDORS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: Ken Chafin <kenchafin-nospam@earthlink.net>
Message-ID: <38628C7C.1C748B45@earthlink.net>
Source record: 91176
Cross-posted to: rec.radio.amateur.equipment,rec.radio.misc

FEDS RAID ELECTRONIC HOBBY VENDORS

12/18/99

2600 has learned that several small electronic hobbyist vendors were recently raided by
federal
agents brandishing semiautomatic weapons. News of these raids has been kept out of the media

and many of those involved fear retribution if they openly discuss the case. Until now,
these
companies had operated for years selling harmless educational electronic kits (like wireless

microphones) to students, hobbyists, ham radio operators, and hackers. Now their inventories

are being seized at gunpoint--and their owners could be facing bankruptcy and prison time.

The U.S. Dept. of Justice is apparently re-interpreting federal wiretapping and smuggling
laws
to include small hobby radio transmitters. Even possessing so-called "Mr. Microphone" type
toys can now put hobbyists at risk of looking down the barrel of a federal agent's loaded
gun,
a felony conviction, federal prison time, loss of property, and legal fees into the tens of
thousands of dollars.

Ramsey Electronics and Super Circuits are just two of the companies recently raided at
gunpoint. Both have good and longstanding reputations for selling inexpensive, quality
educational kits and components to electronics hobbyists for many years through ads in
electronic hobby magazines and their websites.

A high-ranking Justice Dept. official told one of the business owners the orders for these
raids are politically motivated and originated from a very high level in the Clinton

administration as a result of the Linda Tripp wiretapping case. "They just need convictions," the official said.

Earlier this year the Justice Dept. indicted Bill Cheek, the well-known and loved author of books on radio scanner modifications and Monitoring Times column writer. Bill was selling very simple "data-slicer" circuits (made from parts available at any Radio Shack) that could be used with a PC and a scanner to monitor radio data transmissions--including unencrypted police mobile data terminal (MDT) transmissions. Even after Bill had been diagnosed with terminal cancer, the Federal government refused to back off, even issuing a summons to court on the same day he was to begin chemotherapy.

In 1995 2600's BernieS was locked up in five different maximum-security prisons over 14 months by the Secret Service for possessing his laptop computer, his software, and ordinary electronic parts available at Radio Shack. He had been distributing parts, software, books, and pamphlets about cellular and coin telephones. The Justice Department's final investigation report stated "There were no victims in the offense."

This is a clear pattern of harassment and abuse of power by our Federal government against people teaching others about electronic communications. It appears our government doesn't want people to know this information. 2600 strongly feels this knowledge is important for people to have, and will continue spreading it at every opportunity. Write and call your legislators to complain about this injustice. You could be next!

I have the following radio for sale:

KE7NR's FT726R

This radio has the following items:

1. Owners Manual
2. Service Manual
3. 2m and 70cm Modules
4. Satellite Unit installed
5. Hand Mic with Dial Tone buttons
6. Built in switchable 2m and 430 preamps (ready for field day)
7. 1200 baud and 9600 baud satellite ready via din plugs
8. Split PTT line for 2m sequencer ready. (Has jumper for non sequencer operation)
9. 2m RX module has extra IF stage added for beter S/N ratio
10. Mods are documented and straight forward.

out.>
Sounds like Michael Marchand at Toronto Scientific and Surplus. Has scopes
piled up from the floor to the ceiling (20 feet) but you can't buy one for
less than $400. And that's just his scope section.

6025. COLD WEATHER PROBLEM WITH YAESU FT-8100 DUAL BANDER RIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: pstever@sympatico.ca
Message-ID: <3861a0a8.50550579@news1.on.sympatico.ca>
Source record: 91252

I wonder if anyone has encountered a problem with the FT-8100 radio whereby it will not power up after it has been subjected to cold temperatures? I recently noticed this happening with my rig as we are starting to get colder weather. After starting up my vehicle in the morning, I try to turn on my rig. It will stay powered on so long as I hold the power on/off button. Once released, the rig will switch off. Eventually the rig will power up after 5 minutes or so.

Right now, it is relatively mild with low temperatures here in Ottawa dropping to around -12C. I wonder what the rig will do when it hits in the -20 to -25C range!

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

Source record: 91256

This radio came out on the heals of a problem Radio Shack had with the FCC over one of its radios being taken out of band in both TX and RX. The HTX-212 is based on an older Icom design and Radio Shack bought the product line with the understanding the micom mask would be reburnt to limit the radio to in band use. The only way to get this radio out of band is to find a supplier for the old micom chip. Icom has dropped them, but I have been told that Midland made a LMR radio based on the same chassis.

Good luck.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

I have successfully taken apart the battery pack but have not had the opportunity to buy and replace the pack yet. I would think that the pack would come assembled and ready to solder the two wires to. This should not be a problem as long as a minimum amount of heat is used along with a heat sink between the new pack and the solder point.

They are 14 volt. MCM Electronics has them. You can use 12 volt
and series a resistor in line with them to bring the voltage down
to approx. 12 volts. Rat Shack bulbs aren't the best quality but
will work for awhile as long as you drop that voltage.
Consolidated Electronics has the 14 and 14,5 volt bulbs as well.
Both MCM and Consolidated Electronics have web sites. You can run
a search under these names and your search engine should find
them.

You need the programming cable and software from Vertex.

Or, find someone else with the software already who can assist you.

I got the IC-706MKIIG because of reported problems with the FT-100 plus the
fact that ICOM has had a few years experience designing and building a
"super-mini-rig" and Yaesu just got started.

You can get a lot more info by posting a message to the following message
boards.

http://www.en.com/users/rayd/ft-847/wwwboard/wwwboard.html
This is a FT-847 message board but I have seen messages posted about the
FT-100 because both rigs have similar features.

http://www.vartel.com/discussiongroups.htm
Follow the links at the top of the page "Icom Discussion Groups / IC706".
This is the best source of info I have found on this rig to date.

6044. FT-902 valves arcing - any ideas?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-23 00:00:00 UTC
From: "Martin A. Gillen" <M.Gillen@BertieNet.Demon.co.uk>
Message-ID: <945959571.12601.0.nnrp-11.d4e56f18@news.demon.co.uk>
Source record: 91271

Hi.

I have tried two sets of matched pair valves in an FT-902DM HF transceiver,
but both exhibit the same symptom. When I power on the valve heaters,
the valves start glowing orange - all is well. However after around 20
seconds,
the valves start arcing, with blue plasma discharges. When this happens,
the
lights in the shack dim somewhat ;-) Obviously, the experiment is shut down
with some degree of haste at this point.

Has anyone any experience of this phenomena ?
Are both sets of valves "soft" ?
How can I prevent valves from going "soft" ?
Is it basically an age issue (both must be at least 2-3 years old) ?
Should I buy another pair of valves, or could this be caused by some of the
PA stage circuitry malfunctioning?

Any advice would be gladly received.

Thanks,
Martin.

Gee what a gruff bunch of posts----all I said was that I wanted to listen to the kids and my particular radio has to have a diode mod to actually tune it on receive to hit the freqs above 450 with 12.5 KHz offsets.

Also as someone pointed out, that it is illegal to transmit on FRS freqs with ham equipment which is of course true. Although, were there an emergency and there was no other possible way to communicate--it IS permissable to transmit with a non type accepted radio for that purpose only. I would point you to the numerous articles by Gordon West in both ham journals and in marine magazines who has always advocated to his Marine Market readers the desireability of having HT's as well as HF Amateur SSB radios that can go on Marine channels in such an emergency.
My work involves working with the Type Accettance of commercial equipment with the FCC and the exceptions are well know for emergency use and commonly done when required out here on the coast.

Sorry, WRONG!

Emergency or not, it has been determined that out of band transmissions CAN get you fined AND your gear confiscated. Look at the recent case of the California ham that had his handheld confiscated when he used it to transmit on the LA County Sheriff's Dept. frequency when no other radio would get out.

He used the justification that his friend was injured (the severity was unknown at the time) and he needed to summon emergency help. Neither the FCC nor the S.O. were impressed. After some time, I believe the charges were either reduced or dropped but, he had a hell of a time.

I realize the comment about the "No Code Techs" was a bonehead remark from some bonehead OT. Obviously, current technology H.F. radios have been modified for the same reasons and those, by many higher class hams and non-hams. That was a poorly directed slam at a lot of innocent folks (my XYL included).

Lastly, you KNEW what would happen when you opened this "can of worms" didn't you???

Martin,

I am not overly familiar with that particular radio but assume it's much like my old FT-101ZD. I would check the voltages on the tube sockets. You might have a short which is putting B+ on the screen grids of the tubes.

Although the tubes may have been new or in good condition, after that kind of abuse, they are probably damaged now. Check the rest of the circuit out then try your tubes again. Good luck.

Martin,

Do be sure the radio is set for 230 volts and not 120. While built-in voltage regulators may protect the semiconductor part of a radio, the HV supply is not so protected and you may be applying more voltage to the finals than they (and other parts) are desigged to take.

Cheers,

Cortland

Looking for one or more examples of 861 transmitting tubes.
This is for a restoration project of the USS Slater, now docked
as a museum at Albany NY. This WWII vintage ship is being made
operational (!!) by some nutcase volunteers who are also restoring
the radio room and the transmitters and antennas.

This can be a charitable donation.

If you have a similar tube that might fit into the same slot
like a TL-750 or TL 1000 (as a retrofit) that might be of
interest too...

Please contact me via email.

Thanks in advance!

Hello Jason:

All previous postings noted.

The Yaesu FT-50 (Dual band) and the FT-40 will support what you want, and
both of them have a setting for "half deviation".

As for all of the "other" information posted with reference to legality,
check into obtaining a GMRS licence. This will aford you and your family
communications on UHF and with more power. You are also allowed some FRS
frequencies. But even with this you must use "type" accepted gear.
However, good commercial gear is not hard to come by.

Just my two bits.

Cheers to all,

Cliff Owen

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Anyone have a suggestion on how to obtain a flexible, 2 meter CB-style, err HT-style, 800 MHz antenna such as a trunked system user would have ?

I tried getting loosening the BNC on a police officer's at a traffic detail as she was eating tofu doughnuts and staring into a large subterranean crevasse, but was unsuccessful.

I did have diner with her however...

Anyway, I checked the web and don't see any references.

I need to touch up my reception a tad, and don't want to bother with outdoor antennas for my sideline hobby.

Danker.

Hi:

The "Real" story on replacement Ni-Cads
and Metal-Nickle Hydride batteries and the
sort is:

THEY ARE NOT ALL THE SAME.

Although many suppliers of Ni-Cads offer
varying degrees of prices is that ya get
what'ca pay for.

There are really just too many suppliers to
list here which build primary cells for Ni-cads and the like...All the way
from Radio Shack to Panasonic. If you have a particular interest in the
interior of your
dead or old battery, and were happy with its results, I would strongly urge you
to
dissassemble the Old (DEAD or FULLY
DISCHARGED) Battery, and take a look
at the cells used to build the battery. Sometimes you can find a manufacturing
code date along with the Mfg of the Primary Cell...If you have a tough budget,
try to locate the defective cell, and replace
it.

This only works if you are good at dissmantaling batteries in a way where
they can be reassembled again

If all else fails, buy a New Battery if ya
can get it at wholesale, or try Battery
Network (Formally Alexander) or perhaps
Gould, or other "Well Know" battery supplier that offers a 1 year warr period

Hope the additional info helps.

Monty

Doing that with an HT will definitely require mods which, aside from
legal issues, could void your warranty.

Also -- the deviation on FRS is half of what we use on the ham bands.
The VX-5R is the only HT I know of with a menu option for halving the
deviation.

I don't think the FCC is issuing any more GMRS licenses. As for the best HT for it, the FT-50 will work, and it has CTCSS plus DCS codes that are used by some radios. As for legality, just listen on 10 meters, and the band between 27.405 and 28.000 and tell me the FCC gives a rats a**! For once, the CB'ers can take some QRM from the hams! ;-)

Source record: 91189

Yep:

I still have a few left...These are Factory New Motorola RLN4008B Rib Boxes and acc'y from $165.00 For Professional Use Only.

Picture can be seen @

http://www2.4dcomm.com/metrotech/mrbox.jpg

You can have "Everything" in the picture for $195.00+$8.00 for shipping and handling. Or if you are on a budget I can sell these items seperately.

Brand New RLN4008B Rib Box $165.00 + $ 8.00 for shipping and handling Factory Power supply $24.50
Rib to Computer Cable $29.50 (Made with Premium componets)

Lots of Factory Programming Cables too for the HT1000, VISAR SABER & Astro-Saber from $135.00ea

With respects to Clones, be aware, some Clones do not have Dual Power Support Systems, and can prove fatal on some High End Motorola radios. Restoring a radio corrupted by a programming failure can cost ya as much as $379.00 to fix. Earlier radios like P100's, HT600's are NOT as problematic as Later Model Motorola products, so again, beware. Lots of Horror stories availible on request.

Most Clone Cables are pretty good if they are built well and one does not need the Test Features as they do not have Electroincs Inside of the majority of them (Astro-Saber Excepted) so if one is on a budget, you can make your own considerably cheaper, but the Home Made Rib boxes and some clones can put your radio at risk......

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

6082. Question about TM-241A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-24 00:00:00 UTC
From: The NeXus <nexus@datasync.com>
Message-ID: <83v1cv$ga6$1@news.datasync.com>
Source record: 91192

I have a Kenwood TM-241A which both pilot lamps have gone out on.. Its impossible to see the display when the light is off in the room and even with it on you have to be standing right next to the display to see what freq and other information is displaying.

I have the source for the parts I need, "the lamps" you can buy them from www.pacparts.com for about 3 bucks.

My question is, What it takes to get inside the radio to replace these lamps? I know some radios require a service tool to open up the display to get where the lamps are, Like the TM-221 and 231 both need a tool, and thats an extra 16 bucks. Now the money isn't the problem but I don't want to order lamps and then find out that I can't install them until I have the tool.

Could someone confirm for me if a tool is needed to get to where the pilot lamps are or not? And maybe some basic directions as to taking apart the radio for this job would be helpful as well... Thanks.

Jimmy, KB5FSV

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

>A well reasoned reply. How refreshing.

Yeah, it's amazing what the brain can accomplish when you don't waste its gray matter on memorizing trivial stuff like Morse code.

>The only thing I might say is that as you spent most of the past 3
>decades listening, you are different. 75 percent of hams, you know, are
>more concerned with endlessly flapping their gums.

A week ago I might have disagreed with you. However, this afternoon I heard another ham time out the same repeater three times during one QSO. I checked the Buckmaster database and found out that the guy's an Extra who ought to know better. I can see someone doing it ONCE if it's a repeater they're not familiar with and thus don't know what the timer is set for, but three times during the same QSO?

>Thus, they never learn how to use the tools their radios give them
>properly, such as DSP.

Hey, give 'em time, they'll get there. First they have to master setting the clock on their VCR, then maybe they'll get to the trivial stuff like how to run a radio. :-)

Some of the things that I, as a no-code Tech, have seen licensees with a General or above do while operating the club station during a contest:

1. Try to work 40 meter phone with the radio in CW mode. (The guy couldn't figure out why the phone portion of 40 was so totally dead in the middle of a contest. The packet cluster was spewing out line after line of multipliers on 40. He darn near turned green when I reached over and put the radio into LSB mode, thus switching in the wider phone filters and allowing him to hear - and work - the LU6 that was calling "CQ Contest" on the frequency we happened to end up on.)

2. Start calling CQ Contest in the portion of 10 meters that is reserved, during the 10 meter CW/SSB contest, for non-contest use.

3. Turn the RF output down to tune the antenna using the radio's built-in antenna tuner, and then forget to turn it back up again before resuming operation...then spending about five minutes wondering why he couldn't bust the pileup before the guy running the logging computer looked over and noticed the rig was only putting out about three watts.

4. Tune through about 100 Khz of the 20 meter phone band with the
Timewave DSP set on CW while wondering why everybody sounded like
Donald Duck on dexadrine.

>We are a distinct minority.

You mean those of us whose VCR's haven't been flashing 12:00 for the
last six months? I agree. :-)

>You can't work them if you don't hear them.

Some guys I've seen could hear them but STILL couldn't work them
because they couldn't understand them. That LU6 that I mentioned
above, the guy still couldn't have worked him even after I put the
radio in LSB where it belonged, because he couldn't understand the
operator down there in Argentina giving his callsign due to the
accent. I had to tell him the guy's callsign.

Maybe that's why guys like Hiram Percy Roll stay on CW...perhaps they
just can't hear worth a <expletive deleted>.

Source record: 91198

I am interested of getting a used non-secure Motorola Saber VHF radio for ham radio purpose. However I am too sure whether a VHF Saber is capable of transmitting on amateur band or not. Any clarification on this?

Another point is I have been told that are a lot of Saber version, like Saber 1, Saber 2, Saber 3 and System Saber. Also what does it means by 2D, 5D, 6D and etc..... Appreciate if someone could share some comments on this.

TIA.

..Jeff

I've been wanting to ask for many years:

Why would anyone want to use a ham radio
out of the intended band? I can't think of a good
reason.

No flame intended. I just don't get it. Can see it
with listening, but transmitting baffles me.

I don't have a license that covers out there,
and I believe the FCC has to test them.

Don't wanna be the grinch that stole xmas,
so I won't.

In Wide Pos. the IF is 454.3 - resulting in a Beat Tone of 700 Hz
In Narrow Pos. th IF is 455 - resulting in Zero Beat?

Just installed a YG455C (w/o the -1) on a PCB and plugged it into the
Socket.
Result: In Narrow Mode the 500 Hz-Filter works, but the Center of The Filter
results in a beat-tone of abt. 1400 Hz! With this Freqeuncy on VFO turning
the Pitch control to zero results in a beat tone of the 700 Hz! Is this
normal or what am i doing wrong?

thanks for any comment
michael.klemmer@bergedorf.de

The Civil Air Patrol and MARS both have frequencies outside the ham bands where you can use modified ham equipment.
>
I have also heard of some people who were properly licensed for commercial frequencies and had a ham license. So instead of having two radios mounted in their car (a ham and commercial), or carrying two portables, they modify a ham radio that will serve both purposes. Bear in mind, this is violation of FCC rules because the ham radios are not type accepted for commercial bands.

The chances of the FCC taking action in a case such as above is pretty slim. They would have to act on a complaint from somewhere and chances are initially, they would send a letter to the offender to stop using the
equipment. If a person say owned a business, and had his/her business frequency in their ham radio, and switched up there to conduct their business, I doubt anyone listening would know whether the signal came from a commercial radio or a modified ham radio.

In areas around us up in Maine the FCC has been cracking down on FD's etc
that buy modified ham eqpt for Dept use.. I think outfits that sell
commercial gear put the pressure on because the identical guts in a Vertex
is 3x ham price!!

You need a "low-pass", on your transmitter, a "high-pass" on the stereo receiver, also rap the ac cable on a ferrite rod, and put .01mf caps across the speaker terminals.

From: George Andrews <mauser2@erols.com>
Message-ID: <8404csrpe1@bob.news.rcn.net>
Source record: 91210

To AF2Y
Perhaps, if one assumes the worst and chooses to make hasty generalizations. But then what would non amateurs who listen in on activity on the HF bands? Particularly those who have more advanced "credentials". Would it also be logical to conclude that all amateur operators are the same? Tune in to some of the HF frequencies, sometimes those allocated to those with more advanced licenses and it doesn't sound much better than CB. Language, jamming, net attitudes and the comeback when you have a kilowatt mentality are all examples of the behavior one can find. Do I assume all more advanced license holders are the same? Of course not!
Amateur radio as a hobby will die off if we do not increase the numbers. Consider spectrum auctions. As no code techs come in to the hobby, please consider approaching them with the same consideration you perhaps once received. Is the Elmer concept to old fashioned for us anymore? Many operators prefer HF and that is great. There are no code techs who may come into the hobby and want to go to the higher frequencies. There may be some who never operate below 50 MHz. Perhaps such may even assemble a 10 or perhaps a 24 GHz station. Perhaps SHF and above are the only areas left for experimentation. Operation in this area usually means a lot construction of tx/rx gear and antenna design and construction. For such purposes why does one need anything more than tech no code? Lest one think I am anti cw, I am not. CW is great for working aurora, meteor scatter, eme and weak signal work in general. One can be a no code tech and learn and use cw.
Enough said.
A very Merry Christmas, Happy Holidays and Happy New Year to All!

FRS is +/- 2.5 KHz FM deviation Our ham gear is still +/- 5. If you do it, at best will sound bad, at worst it will interfere with adjacent channels commercial user and get noticed. Go spend $50 at Walmart and get the real thing.

Source record: 91218

I could use a little help, I had a MFJ 422b combo which includes the MFJ electronic keyer and the Bencher paddles. I just bought a Kenwood TS-570D and wanted to use the internal electronic keyer in the 570 so I removed the electronic keyer from the paddles. I wired the paddles like the TS-570 manual said using a 3 conductor cable and stereo plug with the tip being the Dot the center being the Dash and the top being the ground. The problem is both side to exactly the same thing. If I hold either paddle I get a Dah Dit Dah Dit Dah and so on.. If anyone has some input I sure could use some help.. Thank you..

that's cold ;-]

2 sides to a coin and all that.

i helped a young man get his no code license and what a waste of time
there [just talking about this one person, not in general]

he bought a 2m ht instead of a similar priced dualband.
then he asked a fellow user of my repeater system why he couldn't find
it anywhere on the 2m band, he looked all over.

as you can see by my sig, my repeater resides a little outside 2m.

on the other hand, another young fellow got his no code ticket with my
help and has been advancing ever since.

just depends on the person.
the end

I need help with my VFO, which seems to slip once per revolution of the big dial, putting me about 7 - 9 KCs off frequency. I have noticed, usually around the large dial number 50, that the hand knob will be turning, but the analog dial behind it is not. Is there some way to tighten the dial, or shaft, or gear, or something?
Thanks,
Jim KH6IX

==========

You must be one who is perfect, and
can build your own....Some are not
able to do such a perfect job as you !, but
still desire a cable that is well built and detailed as in this picture.

http://www2.4dcomm.com/metrotech/r_to_c.jpg

Please take note of the "Strain" reliefs, the
Cable Supports, and the cable is even coded with a lable to ID it.

One can build the cable for probably less
than $10.00 if you have the time a patience. and I can even give ya a web site
to visit. for Free....

However, some do not wish to bother, or
take the risk with a Home Made cable.

Happy Holidays to you too !

Monty

6117. TM-742A Microphone Upgrade?

Newsgroup: rec.radio.amateur.equipment

Can I upgrade the MC-45DM microphone that came with my TM-742A in '95
to a MC-53DM back-lit mic? Just a direct plug-in replacement?

Also, the DTMF and other function keys on my MC-45DM never produced
a "beep" when pressed. Is this by design or do I have a faulty circuit?

Would appreciate hearing from someone on this.

any email, please reply to moranges@moranges.com, my temporary holiday
email address. Thanks.

I agree with you! I think this is perhaps why there are not more people involved in amateur radio. These attitudes would certainly turn away a lot of folks. I know your query is not the only one that has elicited such a response. I normally lurk more than write, but this tripped a trigger for me. What ever happened to the Elmer concept? I wonder if amateur radio will survive. I think when the smoke has cleared, you will have obtained some decent info. Anyway enough negatives!
Happy Holidays and a Happy New Year to you and yours!

73
George Andrews, RRPT
mauser2@erols.com
N1YAE FN31k

Hello George,

Actually I was not the one that was originally looking for the info to see if setting up a HT for FRS was possible. I made a post that said I made a mod to allow my (European version of the) IC-32 to receive above 440, 450, and 460. The top of European UHF band is 440 and as I got it, it wouldn't even go above 440.

The original person was asking if it was possible and all I said was that I was just doing the mod to monitor what the kids were doing on the channel I have them stay on. That whole thread sure seemed to bring a bunch of strange comments.In fact, I stopped even looking at them after the first two or three. Maybe they should go after the numerous people that have web sites and publish books on radio mods instead.

In reality and on the balance of the comment, I have a commercial Motorola Marine transceiver just like the ones that have been on most Coast Guard boats and an Icom IC-M27 Marine transceiver on my own boat. But in addition, I have an amateur portable that has been "modified" to work in the marine band. In the event that my electrical system failed, the antenna system failed, or some other disaster happened while at sea, would I use the last (amateur) radio I had to call for help in an emergency or sinking as recommended by Gordon West and others?? That decision would take at most a second or two as I don't consider the unlikely confiscation of my portable by whatever authority to be worth the loss or potential loss of the life of a family member or friend. I've read about the over zealous sheriff in California (where you would expect something like this to happen) and the young man trying to help his hurt friend. My hats off to him and I'm sure most caring people would have done the same thing. It involved transmitting on a police freq (a slightly different situation), but numerous others have done it with ham equipment on the marine

band where the public normally operates and have been heroes for it.

The metropolitan marina system I'm in has many hams that are boaters. I'd be hard pressed to think of any I know that don't have amateur portables with marine capability to back up there regular systems. In fact one is a Coast Guard official and another is an FCC Field Inspector.

Happy Holidays

I work RTTY on Sunday nights on a net. I ran a AL 80 B. You cut you transceiver output to halh (50 Watts) and with the amp only 500 watts. I have made contacts to Washington State with a 579 reports.
So you can use the 811 without any problems. I ran the amp only on 40 and 80 meters and I put out 850 watts on SSB on 80 and 750 to 800 on 40. It runs on the house line without any problems.

There are about 3 reasons one would want general coverage transmit
capability.

1. To be used for transmitting illegally on unauthorized frequencies.
2. For MARS members who operate outside the ham bands.
3. As test equipment (signal generator).

I use my IC-706 for #3. It is very stable, transmits all modes and has a
wide range of frequency coverage making it an ideal signal generator for
testing other radio equipment.

Here in the UK it's a bit like that with 70MHZ, gear is few and far between. The one rig with 4M off the shelf is the Yaesu FT-847. All others use transverters. Someone might think to design a transverter for 2M input and 220MHZ output.

From: CJ <cjr@visi.com>
Message-ID: <3863D134.EDFEE085@visi.com>
Source record: 91240

As others have pointed out, there is MARS and CAP operation. Many experimentally minded ops also like to have signal sources for frequencies that are out of band. An HF rig modified for all-frequency operation working into a dummy load can be a very handy and perfectly legal signal generator.

Without modification, my FT-990 and many other FCC accepted rigs can be operated outside of the ham bands as they come from the factory. 40m on the FT-990 runs from 7.0 to 7.5 MHz, 20m runs from 14.0 to 14.5. I beleive that the transmit-enabled width of all the bands except possibly 160m is at least 500 KHz wide.

Note that it is not illegal for a ham to have a rig that operates outside of the ham bands. It is some uses of them that may be.

By the way, I have NOT modified my FT-990.

6131. Re: Out of Band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-24 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <3863D452.AF55CF42@usa.alcatel.com>
Source record: 91241

No Jerry, you're no grinch. Most of us DON'T need out-of-band transmit. Some of us have good reason for it.

1. Many Amateurs are also members of the Military Affiliate Radio System, which operates outside the Amateur bands. That license is not issued by the FCC, but by the Department of Defense. I was a member myself, on and off, from about 1966 until a few years ago. Might be again.

2. It's useful to be able to generate signals for conversion higher to have the tunable IF at the low frequency, rather than UHF and VHF. We are responsible, of course, for radiating only in the bands we are authorized to use for transmitting. The 26-30 MHz range is (or was) popular for upconversion to 2 meters if one wished to cover the whole band. Other ranges might be needed depending what oscillator and mixer was available, what band was to be covered, and to avoid problems with IF harmonics. And one can always double or triple a lower frequency, high-power output to a desired band. Locally, folks use 800 MHz rigs to triple to 2450.

3. Some of us actually need wide range high power RF professionally, and it's far cheaper to use a modified Amateur rig than buy a $14,000 100 watt amp. No license is required for this, as it's forbidden to radiate, which is no problem as these tests are conducted in shielded enclosures.

At one time, we were required to have some means of measuring our own operating frequency. Depending on how accurate that was, we were often required, to be sure we were in-band, to stay some kc away from the band edge. Nowadays, we get right up on the edge, and sometimes, trusting a readout less accurate than we think, go over it.

Sometimes, we forget our emissions are wider than the range to the band edge. 147.995 is NOT a good idea with 16F3 emission; it's 3 kHz out of band. But you don't need to modify the rig to make it happen!

Cheers,

Cortland

If this is just a one time thing and you are not in any hurry, expose them to the sun for a few days. There are some UV bulbs about 1/2 inch in diameter and 6 to 8 inches long that are the fluorescent type that can be used. YOu need to put them in an enclosed box so that you do not look at them as they are harmful to the eyes if looked at very long. Also some of the bigger bulbs that are used around food can be used. You may also hear them referred to as black lights.

Looking for the exact replacement antenna relay for the TS-830S Transceiver.

This relay was manufactured by OMRON and has a 12v coil, DPDT, plug-in type
with a manufactures number of G2E.

Kenwood's part number was S51-1404-05, reference RL1.

Please e-mail me if you have one or more of these relays available for sale.

TNX & 73.

Hello!

In my Kenwood book it tells me that I can do locked band repeater mode. I understand that this allows me to use my Kenwood radio as a VHF-VHF repeater.

However I can not find suitable documentation to enable me to make this happen.

Can anyone help!

I phoned Kenwood and they said, "You can't use the radio to repeat anything". Which is in contradiction to the actual user manual and documentation oin their web site

Thanks

6147. IC-T8 receive range??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-24 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <840vbm$38hu$1@newssvr04-int.news.prodigy.com>
Source record: 91307

The Icom IC-T8 ht is a pretty attractivcely priced package right now for everything it does. I have one question though. The receive range on uhf is listed as 440-470. Out here where I live the local police frequency is 470.685. Will this radio recieve that frequency or does it cut off at exactly 470.000 mhz ? My second choice ht would be the new Alinco DJ-V5TH which has wideband 76 - 999mhz receive. I like the IC-T8 better though because of the six meter transmit and it comes with a hi capacity NIMH battery versus the lower capacity NICAD battery of the Alinco, but it must recieve 470.685. Thanks for any help. --- Steve KK9ZZ

Source record: 91313

Nope your are incorrect Mike.

The only thing similar about the HTX-202 and the Icom was the battery mounting. Radio Shack did not want to carry all kinds of accessories and they picked on a current product. it could have been Kenwood, Yaesu but they settled on the Icom battery rail system for the HTX-202.

Truth is Icom sent a letter to Radio Shack asking them to inform all stores that the HTX-202 was NOT an Icom product nor design. Many sales persons were actually telling customers the HTX-202 was an Icom design. The HTX-202 was a Maxon design. There never was any contact between Icom and Radio Shack. Look around a bit you will find many knock-offs based on various manufacturers designs.

6155. Re: 2m+ HT for Out of Band TX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-24 00:00:00 UTC
From: Brian <none@worldnet.att.net>
Message-ID: <841lg9$q01$1@bgtnsc03.worldnet.att.net>
Source record: 91315

The requirements you have outlined will not likely be met by an amateur HT. Even if you could find the features that you're looking for in a ham handheld there are some issues that you should keep in mind (not to mention the legality issue):

- Amateur HTs in general are very intermod-prone. If you would be using such an HT in a high-RF environment (such as a busy fire scene) you would probably be frustrated by the lack of selectivity. Paging systems in particular will wreak havoc with most amateur HTs when they are used outside of the ham bands.

- For some unknown reason the size of amateur HTs continues to decrease to the point that they are becoming impractical. While a small HT may seem attractive from a convenience standpoint, the price paid for the small footprint is that the speakers tend to be the size of a dime or smaller. Consequently most ham HTs manufactured today do not have receive audio that can be heard over even minor ambient noise. Again, a noisy fire scene would probably render most amateur HTs useless.

- From a physical standpoint most amateur HTs are not very rugged. I can easily envision an HT being dropped or sprayed with water when working a fire. I don't know too many ham HTs that could stand that kind of punishment. However, many commercial radios are designed with more hostile environments in mind and therefore may be more cost-effective in the long run. It wouldn't take more than a couple of broken amateur HTs to equal the cost of a single commercial-grade radio...

Also, there are many reasonably priced commercially type-accepted HTs available. One can often find a good deal on Icom, Kenwood or other land mobile radios which would not only perform admirably well for your firefighting purposes but which could also be used on the ham bands quite legally.

I hope this information is helpful. Good luck in your search!

You are not comparing apples to apples. In an EMERGENCY an amateur operator may use whatever means necessary to communicate! This includes the use of a radio on non-amateur frequencies. The operative word is EMERGENCY. The case you quote was not a declared emergency, and the motives of the person involved were suspect to one and all.

The FCC is indeed issuing GMRS licenses! A friend of mine just put up a
GMRS repeater a couple of months ago and got a license for it.

The Yaesu FT50 can be modded for GMRS and FRS using a software mod that can be found on the internet.

Bushwa -- who is this anonomous 2600? Why would we care who it is?

In the LA area some "small electronic hobbyist vendors" were raided on or about that date. As I recall several million dollars worth of (illegal) cable decoders were confiscated. These raids were reported in the (local) media .. which is a bit surprising, since no one was killed, raped or mutilated.

Phil

Not so... FCC rules apply for ham operators, to HAM OPERATORS in HAM FREQUENCIES.
So, the part 97 rules say you can xmit WITHIN HAM FREQS, OUTSIDE YOUR LICENSE
CLASS in an emergecy of life/limb. ie) a Tech may use HF to contact for help.
It does NOT allow you to transmit on PD freqs! There are no PD freqs in Part 97.

With that said, would I xmit on a PD freq, if that was all I had left, so summon help in emergency? You betcha... I'll deal with the consequences later.

6164. Collins equipment

Newsgroup: rec.radio.amateur.equipment

Source record: 91099

I have a couple of pieces of Collins equipment for trade; I will trade either one of them for a Racal 6790GM receiver, or a Cubic Systems 1030.

Collins 671U-4A with manuals 2 to 30MHz coverage
Collins 671V, with antenna coupler/power amplifier/external speaker/telephone handset 2 to 30MHz coverage (actually, this unit has good performance down to long wave)

I am not interested in cash, only trades. If you have any other esetoric receivers, I might consider them.

Well, what about the commercial radios that are used for
commercial communications that also have ham frequencies in
them? Are we to believe that these can not be used on the
ham channels?

Just what does make an EMERGENCY that a ham can operate out of the ham bands ? Several cases have tried this excuse of an emergency and have lost to the FCC. Part 97 only pertains to the ham bands . This means that a no code tech or even up to an extra class can use any ham frequency and any mode on any ham band, but they can not go out of the ham bands.

I know of no emergency greater than saving a life, but that is not a good enough excuse for the FCC to go out of the ham bands. Real interisting thing. If you do not own the radio and are not licensed, you loose nothing as you have nothing, but if you are a ham you stand to lose your license and radio..

It depends which one you get. The original TM733a has 2 pigtail type antenna connectors (and a non-backlighted microphone). Later the radio was offered with a duplexer and a new backlighted mic. I do not know if the supplied duplexer was built in or an outboard unit, but I suspect it was outboard. I cant imagine where a duplexer would be squezzed into my radio!!! The VHF and UHF boards are seperate and there is a 1/4" thick casting of aluminum between them...ie, there is no common cavity within the radio to house a duplexer network.

Sorry I havent answered your question directly, just filled in some blanks maybe.

The report I read said that EEB's owner was convicted of consipring with a federal employee to defraud the govt. According to the report, it involved a deal to submit bogus invoices for batteries that were supposed to be supplied to a federal agency and never were.

Nothing to do with a raid for illegal listening devices as far as I know.

I have done this and the resulting radio is a pain to use and like
you've asked there is no AM activity.

Depending on the PLL used in that radio, you can alter the control
pins to make the PLL oscillate up in the 10M band. One problem is
that the PLL will only "lock up" so high like maybe up to 28.300
mhz, after which the PLL does not work right without extensive
mods. So you could get the CW portion of the band, but phone
operation is prohibited from 28.0to 28.3.

Next CBs are channelized radios and the frequencies you get will
be 10 khz spaced like 28.005 28.015 28.025 28.035 and so on.
Further you will see channel number 32 and need a hand made chart
to refer to to know what actual frequency your on.

Forget all this.

Go to Radio Shack or call 800 number and get/order an HTX10 for
$140.
Has a freq readout all modes except CW (a shame) and is a good
tranceiver for the money. We have ben hearing HTX10s for weeks now
and they all seem to have great signals.

By the way, I run only 10-15 watts on my mobile, and make daily
contacts to places like France UK Finland...Wyoming Utah
California etc...from Ohio.

The sun does it all...not the amplifier!

Steve:
There is some AM operation on 29.000 Mhz.

I know of no easy way to convert and the effort it would take would probably outweigh the effort and possibly cost it would take to convert a crystal CB radio up to 29.000 Mhz.

If the PL is still functioning, I would keep it as an 11 meter radio.

I know this is a little off the track of modifiying but the Radio Shack HTX-10 is getting some pretty good responses from the local hams and for the price it is a pretty good rig. If you cant find one locally ask for a rain check from Radio Shack for the $139 price they are currently offering.

Jspaz@i-55.com writes:
>Well, what about the commercial radios that are used for
>commercial communications that also have ham frequencies in
>them? Are we to believe that these can not be used on the
>ham channels?

Generally, *anything* can be used on ham frequencies as long as it meets technical specifications for frequency stability, off-frequency emissions, etc. You can build the transmitter entirely yourself, or modify a radio used in another service - doesn't matter as long as it meets standards, and hams themselves are allowed to judge whether standards have been met.

A commercial radio that happens to transmit (cleanly) on ham frequencies is legal in both bands, provided you didn't have to modify the radio in a way that voids its commercial type acceptance to get it to transmit in ham bands.

>QUOTE:" Nope your are incorrect Mike.The only thing similar about the HTX-202 and the Icom was the battery
>mounting. Radio Shack did not....."
THIS is true. If you know a radioShack manager ask him/her to show you the "Internal company Merchandising Newsletter" from Sept. 99, page 2. It specifically & clearly tells all store employees that ICOM, ALINCO, Kenwood, Azden, Yaesu & Standard Have NEVER designed or built ANYTHING for radio shack & informs employees not to spread such rumors. (I'm sure there have been many "know-it-all" salesman & customers that "decided" they knew who made the radios & proceeded to tell people their "stories"!!). The HTX-202/404/212/242 were designed & built in Korea by Maxon, & the new HTX-200 "kepad-less" mini HT is made by a company called Maycom & can be seen w/ the company model # & name at maycom's website: www.maycomcoltd.com

An historical note from one who was there - the Globe King, sold by Leo, W0Get Fat Quick, had an outboard SSB box you could buy - this was an option with several rigs, like the B&W5100. And, yes, the DX-60 was Heathkit. My first rig was a DX-35, its predecessor, with an S-38C receiver and a long wire. It worked.

73 and happy holidays -

FS Very good condition and working all bands Zenith G-500 Transoceanic. This is one of the rarer TO's and some think the best looking of the tube units. This one looks good and will display well as is but is not mint. Comes with the 1L6 tube, not a cheap substitute.
Buyer to pay UPS. Looking at $125.00.
Thanks
Butch

For sale, the DX-440 AM/FM Direct Entry Communication Receiver with SSB and digital read-out. While this portable receiver operates on 6 "D" batteries, I also have the optional AC power supply..... It tunes from 150 to 29999 kHz and has the 87.5 to 108 MHz FM broadcast band as well. And you can tune in your favorite ham operator by using the SSB mode. Features include scanning and storage of 9 different frequencies in memory.

A picture of the unit is at: http://sites.netscape.net/cvaughn2

Priced to sell, $85 and you ship.

OK Ed,

I'm confused now. Why would it be illegal for me to transmit on the firecom frequency using my 2-meter radio when it is perfectly legal for me to do it on my fire department-issued radio? I'm legally authorized to transmit on that frequency, what possible difference could it make which radio I use?

If it's genuinely illegal, I certainly won't do it. Where did you get your information?

Thanks,

Darrell

From: "Andrea D. Kelly" <andrea325@worldnet.att.net>
Message-ID: <3865C6EE.BFD01F93@worldnet.att.net>
Source record: 91140

Guys:
I got a Yaesu 50 RT radio for Xmas with the Ni-Cd battery pack and the charger for Xmas and for the life of me I can NOT find any way to hook up the charger to the backpack. There is not ONE word or diagram in the enclosed instructions on how to do this! I have looked everywhere and there is no hole for the charger end to fit into anything. Is this some hideous joke by Yaesu. The instructions for my FT-920 are beautifully written.. this is an absolute botched mess in the extreme. I guess they think it is so obvious but unless I have to drill a hole I give up.

Frustrated or stupid,
Bill aka WA6WV

Jerry, there are a lot of us who are firefighters, police, Civil Air Patrol or MARS communicators, and having a single radio that can do the role of 2 or 3 different agencies is very helpful. I already carry 2 portable radios around with me simply because one angency I'm with uses Motorola Type II 800mHz trunking, and another uses VHF. If my Kenwood TH-G71A didn't cover the VHF (public safety) band I'd end up having to wear 3 radios on my belt. Do you realize how STUPID that looks walking in a mall or a store with 3 radios on your belt?

I'd much rather have one, that can serve all of my jobs when needed.

As for the license, thats not an issue, With most departments they carry fleet licenses so multiple users can use multiple radios at any one time..

Example: If one agency was looking for a bank robbery suspect and I happened upon that vehicle and person who match the description put out on a BOLO, I could simply pick up the mic and announce I was following the vehicle at so-and-so, at that point everyone knows and the dispatch doesn't have to relay info from a cellphone call. I can talk directly to units and give them real-time updates as to location, speed, etc.

I don't have much room in my truck, I already have 2 radios and no more space left for a 3rd. I have a Kenwood TM-V7A dualband and a Motorola Spectra 800mHz Trunking radio. With the kenwood I can talk to agencies in my area who don't have 800mhz. It has helped in that very type of example above on a couple of occasions.

I would NOT advise a ham operator in doing this, but if you are a legit Public Safety officer (atleast where I live) its AOK to transmit on other agency's frequencies to communicate with them. We do it all the time.
Jimmy

Jerry W. O'Dell <jwodell@ameritech.net> hath said:
: I've been wanting to ask for many years:

: Why would anyone want to use a ham radio
: out of the intended band? I can't think of a good
: reason.

: No flame intended. I just don't get it. Can see it
: with listening, but transmitting baffles me.

: I don't have a license that covers out there,
: and I believe the FCC has to test them.

: Don't wanna be the grinch that stole xmas,
: so I won't.

I own a IC 746. I think it is a great rig. From what I've heard, if your specialty is VHF/UHF, you might like the 847. HF wise, the IC 746 is your choice.

Mike

Hi Steve:

I saved this from a previous post...

==========
From: Jim Fielden <fielden@utkux.utcc.utk.edu>
Subject: ICOM IC-T8A Wide Band Mod Here!
Date: Monday, February 16, 1998 2:48 PM

Hello All
To allow the Icom ic-t8a to rx
50 - 230 Mhz / 300 - 1000 Mhz
Airband am/fm 300 - 400 Mhz

Hold down the Band and Squelch Buttons, then turn the radio on, keep the
buttons pressed until the radio opens up about 2 or 3 seconds just watch the
display and you can tell.

Have Fun and See Ya on 6

YEAH - right... so MANY of them "ruining" amateur radio with all the crowding there is on the bands... They're SUCH a nuisance to SO many...

Yep, sure, unh-huh....

OH - wait - I see you aren't showing a Ham call - so maybe you are talking about *Citizen Band*... in which case, who cares?

You can turn the tuner off with no problem, but there is no way external to the case to adjust the tuner setting.

Since BOTH rigs are specifically designed for *MOBILE* operation,
exactly how often do you suppose front-end overload and intermod are
REALLY a problem under mobile conditions? Sometimes folks get so
focused on percieved "weaknesses", they totally overlook the
intended/normal use of the device in question! I *rarely* hear mobile
stations complaining about their receivers being "overloaded" by the
guy they are working - or any OTHER signals on the band, for that
matter - hell, they USUALLY are just glad to even be WORKING another
station...!

I have a GE 3-5980 40 channel handheld CB radio (distributed by Thomson
Consumer Electronics).
Its an "el cheapo" model (worth about $15, and is AM only.
My questions are: Is there any use for AM only radios on 10 meters? Does
anyone use AM on this band?
Are there any mods to make this radio work on 10 meters.
Any info welcome
Thanks, Steve KB2YWP

I had the 847 when it first came out and did not like it because it
did not have a tuner built in. I have kept my 746 longer than any
radio I have owned so far and like it. 100 watts out on 2 meter ssb
makes up for not having 440.

I was not claiming "Intellectual superiority" but merely stating a fact. I guess Joe thinks that if he posts his repeated message every 6 hours, that people might not have read the other 40 messages, and they will zip on over and bid on it.

Hence the "Not the sharpest pencil in the box" comment. He's nothing but a spammer.

BTW: He's listed the same item twice, and still not 1 bid.

So much for Mega Advertising.

my 706 mk none got trashed in a wreck and after being handed a 1700.00
check from the other persons ins company for the radio equip alone, i
ordered a 706mk2g. my 706 worked like a champ in it's mobile
environment. 1 cable to connect the 2 parts. plug the mic into
the head or main unit. when i picked up the mic i knew i was using
a mobile rig in a mobile install and my expectations were adjusted.
yes i was close to getting a 746 and putting that in my
dodge dakota [w/magnum v8] which would have been
pretty spiffy. the 706 just fits my need in a mobile multiband rig.
many many comments on how nice the installation is and plenty of
compliments on the function. both are important =]

of course if anyone would like to see what the dodge looks like
now after the body shop and antennae replacement, lmk i'll
put up a pic [g]

it'll never be like in the shack with a quad conversion rig and
the 160m wire dipole 120 feet off the ground.
[i have the dipole up that high but still to poor to upgrade
the ic-736]

now if icom would just 'fill in' the blank space in coverage, i
would be finished. 220mHz is nowhere else but i'd like to have
a north american version of the radio with that band enabled.

just my thoughts on the 2 mobile multiband radios in question.

Hello,

I have an excellent condition ICOM M1+ VHF Marine handheld radio in original box with manual for sale. It comes with optional cigarette adapter charger and an extra battery which is the smaller one for a really small unit. This handheld has a great feel to it and is pretty small and easy to carry. Batterys are in excellent condtion and are next to new, the larger extra life battery is still in original box. I have receipts for the radio and extra battery,
has a three year warranty....

>that way.

By the way, plugging the charger directly into the battery pack seems
to be mostly a feature of older HTs - it seems uncommon in new ones.
I have an older Icom A20 aviation handheld that wonderfully flexible
this way - the battery pack contains slow charger circuitry, and it can
be charged 4 ways:

- slow charged by AC adapter plugged into one side of battery

- slow charged by external 12 V supply plugged into other side of battery

- slow charged by 12 V from charging contact on radio, when radio is
powered by external 12 V input jack

- fast charged in drop-in charger using contacts on bottom of pack

This is much more flexible than the pack in the FT-50. On the other hand,
it's also about twice the *size* of the FT-50's pack for about the same
energy. It's also about twice the *price* to replace. And the Icom
pack is not water-resistant while the FT-50's is.

What precautions do any of you do to safeguard your solid state rice boxes when lightning's present?

I know one can disconnect the antenna but...

Is gas discharge protection a worthwhile option?

How about you tower owners? static balls or ground straps???

Appreciate any feedback.

Phil G4ZOW

6241. Power adjust on the Yaesu FT-690 PA

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: jerry_ifa@my-deja.com
Message-ID: <845u9dtjr1@nnrp1.deja.com>
Source record: 91001

Thanks for reading this. I have a Yaesu FT-690 the power amplifier is designed to produce 10W. I measure 5W output, with a good power meter. Is there an accessable power level adjustment? The schematic shows a variable resistor off of Q4 in the alc circuit, maybe....?

It works, but I want it to function at design levels. For now I use the battery pack to drive my amp, not a problem. 73 Jerry

6242. FT-2600 to PK-88 problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: Ben Moss <ssomneb@my-deja.com>
Message-ID: <845uc2$tk3$1@nnrp1.deja.com>
Source record: 91002

I have a Yaesu FT-2600M that I am trying to interface to an AEA PK-88
TNC for packet. The TNC talks to the computer just fine, but when I
plug the radio into it, the DCD LED lights up, indicating that there is
a signal. I doubt the problem is with the cable from the radio to the
TNC, but it could be. The TNC does not key the radio when I tell it to
ID, but it does momentarily transmit when I turn the TNC off. It
doesn't transmit a packet signal, it just keys the radio for a second (I
checked with an HT).
Also, when I put the 2600 into "Packet" mode (which is supposed to turn
the microphone off), the microphone can still key up the radio. Is it
supposed to do this?
Anybody have experience with this radio or this TNC?
Thanks, & 73,

Source record: 91006

I find narrow CW filters un-needed on my 756, I use the APF, which does fine
for me, but a very serious CW op, might want a nice crystal filter inline.
It depends, how much CW you do, as to how much you want to spend on filters.

Source record: 91008

I have one of the new Ranger RCI2950dx mobiles and want to get it on both bands with the smallest hassle from inside the truck. I envision a simple preset L network on the back of the radio built around a toggle switch. Right now I have been clipping on a foot of 12 ga wire to resonate, like an inverted L.

Is there another way?
Would it be better to resonate for 10 and tune down to 12m or resonate for 12 and tune it up to 10m? (are 10 foot whips available?)

By the way this new radio is very different in construction from the older RCI radios. Its all surface mount and metal shielded section construction. It could use some mechanical filters although, seperation of CW signals has to be done by the processor between you ears. An outboard audio DSP might be nice to add.

Tim

6249. ATTN: Kenwood 261 Owners

Newsgroup: rec.radio.amateur.equipment

From: Murray Green <mgreen@erols.com>
Message-ID: <38669058.EC29151@erols.com>
Source record: 91009

Just a heads-up. My 261A recently locked up totally. Resetting would not correct. Off to the factory and back, less mike. Nothing wrong. Bad mike was blamed. Seems it is a common problem.

However, after-the-fact, I noticed that the number 2 button on my mike was indented. Apparently it was used for an autopatch and did not pop back out causing the lockup.

So the moral of this story is check out the buttons on the mike BEFORE sending it off to the factory. I hope this helps someone, somewhere, sometime. 73 Happy Holidays. K3BEQ

6250. IC-746 or IC-756

Source record: 91010

I will be buying soon a HF radio, but I can't make up my mind. Should I wait till the 756 Pro comes out or get the 756 or 746 now.. I would be curious for any input on the performance of the 2 current rigs. I understand that the Pro will not be available till the spring ,then another year before the bugs are corrected. . From what I did see on the regular 756 radio looks nice, but the LCD display rolled off at minimum angle of view. If the front end of the 746 is a s good as the 756, I think I know which one to buy. Dual watch, active scope , I don't believe will be my main concern, just looking for a hot selective and sensitive receiver, and clean transmitted audio....
As to filters, I have an FL-52A from my IC-751, I could use that in these rigs I believe, my prime forte will be primarily SSB and some CW. I would spend the money on filters if it gets me maximum smoke.

Many thanks for your responses.....Tom / 73

From: Max Imo <not@this.net>
Message-ID: <IPv94.1939$M56.98774@news.corecomm.net>
Source record: 91013

I pull power for my 8100 from the auxiliary device socket (the other cigar lighter socket - many new autos have them) and have had no problem. It is fused at 20 amps, more than sufficient for this rig. The rig draws so little power in receive that I do not worry about running down the battery. I do choose the lowest transmit power setting I feel comfortable with when set up on crossband to conserve battery power in the unlikely event I should have to transmit for extended periods.

I use cross band repeat, both one way and full cross band nearly every day. I set APO for 11 hours. It will shut off the rig 11 hours after the last time I transmitted on the rig, either in person or cross band. 11 hours will get me through work but shut off the rig in case I leave it on when I park the car overnight.

A 20 amp switching power supply will run the rig and other accessories quite well. I see the switcher from MFJ got a very good test and review in QST. There may also be conventional power supplies that will work equally as well.

Enjoy the 8100. It's a great rig.

Judging from the current letter writing campaign of the FCC to forgers caught in ham license fraud, I doubt much will happen. I knew several ham-cops from a large city police department who carried modified ham HT's off duty for regular ham use and possible emergency use. Worse the HT's were modified at a well known ham store in town.

Probably the ham-cops were in more jeopardy from their employer if it were found out about the unauthorized radios than from the FCC. Since that time the police department has issued all the cops their own take home *legal* HT's so the practice may no longer exist. BTW it was found those *legal* HT's work great on hunting trips, so they aren't so legal all the time either...

I have for sale several BRAND NEW AND FACTORY SEALED 800/900 MHz
high gain yagi antennas made by Larsen Technologies. I'm asking only
$50 with insured shipping to any location in the lower 48 United
States included.
Sorry but I will not ship to locations outside of the U.S.

A picture of the antenna can be viewed at:
www.wolfenet.com/~daydream/larsen.jpg

Some specs:
Factory sealed with all original accessories.
Larsen commercial yagi antenna, model # YA5-900.
Fully welded 7 element industrial design.
Frequency range: 896-960 Mhz.
12 dBd of gain.
300 Watt power rating.
29.25" length.
Feed line connector is standard female N type.
100 mph wind load rating.
Includes mounting hardware and instruction manual .
Visit www.larsenet.com for full specs.

These antennas are NOT repacks, B stock, or closeouts. The units I
have for sale
are high end, current model, top of the line antennas. All sales are
final. I will insure
all shipments.
Upon recite of a *money order* the antenna will be shipped within 24
hours.
Personnel checks are fine but will possibly delay shipment for up to
ten days while clearing.
Please email me to reserve your antenna, I will reply with payment
instructions.
Payment will be expected within 10 days. Please feel free to email me
with any questions you might have. Thanks.

Bad connectors

Connectors not installed correctly

Bad coax

Wrong coax

Antenna parts corroded

Poor installation location

Ground ineffective

Matching system fried/defective

etc. etc.

I'm in no way a sky hook expert - but those are the places I'd start with

Good luck!

6271. Re: Which filter for the IC756 on CW??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <3866D20C.A0D670B6@dimensional.com>
Source record: 91031

Pete,

My recommendation would be to get a 400 Hz or 500 Hz filter from InRad (http://www.qth.com/inrad/), and get it for the first I.F. (9 MHz). For a tighter passband the APF can be switched on, but you'll probably get a lot of ringing with it. I have found passband tuning to be very useful, and it certainly makes a narrow SSB filter pretty much unnecessary.

Tom,

This is a tough choice. The IC-746 is an excellent rig (I use one). If money is no object I would get the 756, and if I were in no hurry, I'd probably wait for the 756-Pro.

Just a thought.

>recieve 470.685. Thanks for any help. --- Steve KK9ZZ

According to the QST review in August, 1998, the ic-t8a is "deaf as a
stone" between 300 and 400 MHz. As to whether you would hear anything
just above 470, who really knows without listening? There are several
gaps in the published receiving range where signals just don't come
through at all, or unless they really strong. So... if you buy it,
make sure you can return it... which might be tricky, since it is
close-out priced at the moment...

Message-ID: <QSd94.13071$Fw1.65644@news1.rdc1.az.home.com>
Source record: 91044

Hello,
Just the other day, I sat down, turned on my IC-706, and discovered I couldn't hear anything. Trusting that I hadn't gone deaf, I realized that my Icom 706 no longer was outputting any audio. I tried using headphones, the speaker output on the rear, and every combination with the litte switch on the back of the faceplate. Yet, in each of these situations, I could hear nothing, not even the beep when the unit starts up. The units appears that it is recieving well, and there is no problems with the trasmit, (I am able to hear myself on other radios).
Has anyone come accross this probelm, or have any suggestions to a solution? I would hope that I could fix the problem myself than send it out for repair.

For Auction: MFJ 1278 Multi-mode Data Controller (Packet, RTTY, CW, FAX)

See the auction at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=221981939

This package includes:

- The MFJ-1278 multi-mode controller
- AC adapter power supply
- Owner's Manual (Includes troubleshooting, calibration, and schematics) - 2 Microphone cables with 5-pin DIN male connectors (one is wired for a Kenwood TS-430S)
- MFJ Packet Starter Pack pamphlet
- Fast-Start manual (not pictured)
- 3.5" floppy of the MFJCOMM 3.0 software. This is the DOS program that communicates with the unit.

The 1278 will operate the following modes:

- VHF packet
- HF packet
- Baudot
- AMTOR
- ASCII
- CW
- Weather Fax

I will try to answer any questions, please don't hesitate to e-mail me.

Thanks

I did already try the CPU reset, and that unfortunately didn't help.

I did make sure that the AF was up and the RF/SQL sensitivity was set
properly for whatever
mode I would select.

As far as I know, I've tried everything but tinkering with its insides. I
did
look inside to check if the internal spearker was working, and tested it.
The speaker is
good.

6285. Re: Out of Band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <38651010.4D8@nbnet.nb.ca>
Source record: 91049

Howdy Jerry and the rest of the contributors to this thread. I agree with Jerry W8GND about his "why" and see the pros and cons of the arguments coming fast and furious. To the firemen that do the dual purpose thing, I could say yes it seems innocent and efficient...still isn't legal. Spanning my acquaintance with radio communications (amateur since 71....aero and maritime commercial since 79) as both an operator and (mostly) installation tech I've seen this dilema surface countless times.....as a professional R/O I've used "out of band" freqs on many occasions strictly to assist in a lifesaving (mayday/sos) situation....that sort of thing goes without saying. In recent times, with the flood of synthesized front-panel-programable amateur gear and field-programmable commercial gear (both HF and VHF/UHF) the ability for that tow truck company to talk to police, fire to talk to forestry, independant loggers to talk to various mills, fisherman to have a "private" freq etc etc etc has been obviously too tempting for countless to resist. It's ALL illegal folks, no matter how ya cut it....excepting emergencies of grave and dire consequences. I know in this part of Canada, for example, there seems (I wish I was wrong) to be a concerted effort by the government to scale way back on monitoring and enforcement so I don't see the situation going away. On countless occasions I've seen commercial users merely buying cheap amateur gear (usually VHF/UHF but on at least one occasion HF in the arctic) and even going so far as to USE amateur freqs, unlicensed of course, for their own operations. Heck with our (amateur) obvious skill and proficient operating practices today, it isn't hard for a bunch of logging trucks to sound like hams when they're out in the boonies (heck those repeaters come in HANDY!). Now.....with the watered down licensing, we are likewise enticing, even advertising for the likes of the foolishness on 11m to join us....I'm calling a spade a spade here....just what I've personally observed.

So....ragging aside....what do we (amateur/radio operators) do to clean it up? Good question.....start by being ever vigilent....DO NOT do the nasty thing with your own, your buddies or a job-for-hire radio. DO report out of band operation AS WELL AS modifications (I can feel the flames licking at me now).....DO lobby for the regulations and qualifications to take our hobby back.....DO NOT support vendors or manufacturers that make it convenient to unlawful users to buy this stuff. DO....enjoy our hobby heheh.....at whatever level you desire but remember....in a day and age in which radio operators and to a degree technicians are being phased out commercially, it is US...."amateur" radio operators who can only pick up the yoke.

Considering that 'out of band' modes are posted on nearly every illegal
CB site (including several sites that sell equipment). I'd say the vast
majority of
modified HF radios are used for illegal operation. A quick tune across the
10 meter
band, when it's open, seems to confirm this.

There is some AM activity between 29.000 and 29.100.

Several years ago, I converted a CB to 10 meter FM so
it can be done. (it wasn't easy).

There's a 10 meter handheld sold by Cooper Electronics.
It does FM/SSB/AM and isn't to bad, goes for about $180.00.

Phil, 2600 is a hacker magazine that's been around for years. If
you're interested in the electronics/computer world it's worth
reading. As for being surprised that the media would report the raids,
it works like this. The feds do a raid and want to make a point or get
a few more million dollars to combat the threat to the world security
that teenagers pose they set up a dog and pony show. They send out
(mis) information packages and invite the media to come over for
coffee and donuts while they tell you they've saved the world. The the
lazy media types go back to the office with their days work done and
crank out a lead piece with all that good govt info. Now if something
goes wrong during the raid, like someone killed or mutilated they're
no where to be found! Now you've had an inside view!

Amateur rigs are not type accepted. This is commercial service for which type acceptance is required. I'm sure the 2 meter rig does the job just fine, but it's not legal. It puts your amateur ticket in jeopardy. I'm not sure what part of the regs commercial service is under. I'm sure there are plenty of people who will tell us which part.

Black lights or the sun don't work. I tried leaving an eprom in a sunny window for a week and nothing happened. Go to your local electrical supply store and ask for a germacidal bulb. I picked up one at an electrical supply store for about $15. It was a 2' flourescent bulb that I put in a regular fixture I had laying around. I can erase about 2 dozen eproms in about 20 minutes.

>enclosed instructions on how to do this!

By "50 RT", do you really mean "FT-50"? By "backpack", do you really
mean "battery pack"?

If so, there is *no* way to connect the charger to the battery pack.
You normally connect the AC adapter to the radio, and put the battery
pack on the radio to charge it. The current regulator circuitry for
charging is actually in the radio, not the AC adapter or battery pack.

Yes, this means you can't charge the battery without the radio. If
this bothers you, you can buy the Vertex CA-15 charging stand. It's
actually intended for the commercial version of the FT-10/40/50
family, but works fine for the amateur versions as well. You connect
the AC adapter (that came with the radio) to the charging stand,
then drop the battery pack (or radio plus battery) into the stand.
The battery is charged via the contacts on the bottom of the pack.
In this case, the charging current regulator is in the CA-15.

Or you can get the NC-50 fast charger (or equivalent from several
other manufacturers).

>there is no hole for the charger end to fit into anything. Is this some
>hideous joke by Yaesu. The instructions for my FT-920 are beautifully
>written.. this is an absolute botched mess in the extreme. I guess they
>think it is so obvious but unless I have to drill a hole I give up.

The manual could be more explicit. But there's really only one way
to hook up the AC adapter, radio, and battery, and it probably would
be fairly obvious to someone who's never own an HT before. Your
problem is likely that you have owned one where the charger plugged
into the battery pack (with the charging circuitry inside the pack),
and you're trying to do that with the FT-50. It just doesn't work
that way.

Dave

Check out the URL below:

http://www.avxcorp.com/products/tpc/pwrfilm.htm

Look at the FFV line of capacitors. There is a model good for 900VDC 140UF.
They also have some 1100VDC 100UF units too. These are on page 3 of the PDF
catalog file you will have to down load. I think you will find these caps
far better than any electrolytic capacitor you could use.

6309. Powering an FT8100R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <845aua$m9u$1@bgtnsc03.worldnet.att.net>
Source record: 91073

Folks
I just got a Yaesu FT8100R and I have a couple of questions on powering it.

1) In the car/truck: I understand pulling the power right from the battery is preferable. To deal with the potential problem of leaving it on when leaving the vehicle and draining the battery, do most people use APO or do you install a relay connected to an accessory circuit (and thus controlled by the key) to make sure it turns off when you turn the key off.

Seems to me that the APO should work fine. Also I can see why I may want to leave it on while out of the vehicle using the repeat function and then let it turn itself off a little while after I'm done. But I wanted to hear from those who have lived with this rig for a while to see of there are any gotchas (for example, does transmit via X-band repeat keep the APO from taking it down or do you really have to push a physical button to keep it alive? I don't wanna have to run to the vehicle every APO minutes to wake it up).

2) In the house: Anyone got a decent power supply at a reasonable price? Looks like it only needs 12 AMPS. Anyone find out any different and/or have any recommendations for this? I don't think I need anything with fancy meters or anything. But if you have learned differently please let me know.

Thanx in advance for any advice.

97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available.

97.405 Station in distress.

No provision of these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its condition and location, and obtain assistance.

No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a), of any means of radiocommunications at its disposal to assist a station in distress.

I suggest you read subpart E and consult the ARRL for interpretation. You may find you are wrong.

Well, tell you what. You interepret HAM rules the
way you want to, and I'll interpret them the way I
want to. ARRL has nothing to do with FCC, other
than they petition them with their ideas. I'd expect
the ARRL to give you a vaugue reply to this, and tell
you to go to the FCC for clarification.
Again, AMATUER STATION (and it's HAM FREQENCIES)
is the key to part 97. AMATUER STATIONS normally do NOT
have the capability to transmit outside ham bands
with the equipment you buy off the shelf...

A side note to the issue. There is a similar rule found in Part 90 "the Public Safety and others rules" that allows a licensee (that being the key) in any other Part 90 service (business, land transport, forestry, etc.) to transmit on frequencies of any other service (PD, Fire) in an emergency where loss of life or property is possible. So if you want to be covered in the highly unlikely event you can't autopatch for help, then go get a Part 90 license for a simple VHF business channel, and away you go, no more question.

6316. Which filter for the IC756 on CW??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC
From: Pete Holden <peholden@home.com>
Message-ID: <2pr94.6740$fH.200011@news1.rdc2.tx.home.com>
Source record: 91080

My new Icom 756 manual doesn't offer any advice....

I'd like to get an additional, narrow filter for CW. As it is, the narrowest filtering I can select for CW is 2.4k for the 9MHz intermediate frequency and 2.8k for the 455kHz intermediate.

I can get a 250 Hz add-on filter for each of the intermediate frequencies. Do I actually have to get one for each, or just one for either. If I can just get one for either, which one should I get?

On the other hand, is Pass Band Tuning just a variable filter which makes the add-on filters unnecessary?

Thanks, Pete KA0TZK

6317. Re: Yaesu 50 RT Battery Charger Hole??!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-26 00:00:00 UTC

Bill (andrea325@worldnet.att.net) wrote:
: I got a Yaesu 50 RT radio for Xmas with the Ni-Cd battery pack and the
: charger for Xmas and for the life of me I can NOT find any way to hook
: up the charger to the backpack. There is not ONE word or diagram in the
: enclosed instructions on how to do this! I have looked everywhere and
: there is no hole for the charger end to fit into anything.

Bill:

I ran into the same problem. I know it doesn't mention this anywhere in the manual, but what you are supposed to do it connect the battery to the back of the HT as if you were going to use it. Then connect the charger to the plug-in on the left side of the HT near the bottom. (This is what you do with the NC-60B charger anyway--I'm guessing you have the same.)

While the battery is charging, you can still use the radio to receive. But for transmitting, it takes the power from the battery as opposed to the charger/DC supply. That means if the battery is worn out, you won't be able to transmit at all because the charger does not have the amp rating the transmitter requires.

If you have a full battery but don't want to use it up when you're near a power outlet, remove the battery so you don't overcharge it (it's already full!) then plug the charger unit into the side as above. It's now a DC supply and you'll be able to receive but not transmit. To transmit from a DC supply, I use an old computer power supply with plug attached to the end of the 12 V connections.

So to answer your question, you have to have the battery plugged into the HT when charging! To get around this, get Yaesu's other charger, the NC-50. I don't have it, but it looks like you can charge 2 batteries at the same time plus you can still use the radio with a third battery.

Enjoy the FT-50!

I *REALLY* think that if *I* was faced with a SERIOUS life or property threatening situation - and had a communications device readily available that would provide needed assistance, I would have NO PROBLEM figuring out what to do!

Visualize you home/RV in flames, and your family members hurt and bleeding - and THEN start quoting me "rules and regulations"... OR try to tell me that instead of sending needed assistance, officials would instead send agents to arrest you...

Ask yourself if you really have a problem. How does your antenna
perform on receive and transmit relative to other antennas within your
experience ? Or anybody else's antennas ?

Just because you are not happy with your SWR meter readings does not
mean very much.

Several guys on the FT100 reflector use the LDG AT-11 auto tuner
with a 103" whip for all mode operation. They claim it works well.

6332. DC plug for Kenwood TH-215 and TH-225

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-27 00:00:00 UTC
From: sjcduke@aol.com
Message-ID: <19991226205702.11139.00000698@ng-cn1.aol.com>
Source record: 90895

I have both of the above 2 meter HT's. I want to use an external source of DC. Kenwood wants $9-$10 for the little DC plug that is necessary. I need several of these plugs, and I am unwilling to spend so much money for something that should be more reasonably priced.

The outside diameter of the plug is 5.5 MM, and the inside diameter is 1.55 MM.

Is there a source for these plugs at a more normal price?

Anyone help me....or have any ideas?

Thank you.....Lee KA0FPJ

>Thanks!
>
>Phil,
>KE6GUQ

I have the ADI AR-247 (220mhz version of this radio) and received
similar reports from people. The transmit audio sounded very
overdriven and was blowing out of the repeater's bandpass on peaks.
In addition, the quality of the transmit audio was quite restricted.

Opening the rig up I found 4 variable pots on the mainboard and
quickly discovered that VR4 controlled the deviation. In my version
of the radio, VR1 controlled the S-meter sensitivity. VR2 and VR3 are
still a mystery. Note that the 247 is one generation removed from the
146, so the component numbering for the variables may be different.
In any event, in my unit VR4 was located near the back left edge of
the mainboard, to the left of the big RF brick. Dropping it back
cured the over deviation reports, but the rig still sounded like a
carbon telephone.

Anyway, at the suggestion of a poster in this group, I ended up
opening the microphone unit, and removed the tiny electret element
that was installed. I repaced it with a Radio Shack 2 lead PC mount
electret element. After mounting that to the mic component board, I
then coupled it through a 10uf tantalum cap to the pin connector near
the base of the mic, to bypass any possible restrictions in the
coupling provided by the surface mount components. At that point I
then padded the audio with a variable 10k pot to ground to reduce the
output. The audio level is now adjustable to the correct level, and
the frequency response is excellent, with reports that it sounds very
smooth and natural. Total cost was around 3 bucks.

Good luck,

Rob C.

6336. =AD: Prep for 10 HAM/FCC tests. Download today!= .

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-27 00:00:00 UTC
From: "DAUNTLESS-SOFT.COM" <fcctest@dauntless-soft.com>
Message-ID: <84738oqgm1@tikehau.netreach.net>
Source record: 90899
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

> I'd appreciate any comments on either rig.

Check out the URL below. It is a FT-847 BBS but there have been a fair number of people posting questions about the FT-100. Good place to get some honest feedback about the 100.

http://www.en.com/users/rayd/ft-847/wwwboard/wwwboard.html

http://www.wm7d.net/hamradio/ft100/ (a little out of date but worth checking out)

For the IC-706MKIIG check out the message board below. You will need to follow the Icom/ic706 links at the top of the page. Extremely good source of info and comments on the Icom rig.

http://www.vartel.com/discussiongroups.htm

http://www.halcyon.com/amreg/ (rig control software)

I would also read the reviews in QST for both rigs. If you have a current ARRL membership you can down load both reviews from the ARRL members only web site. QST had some interesting things to say about the FT-100 that you may want to know about. Also the now discontinued magazine, CQ-VHF, also did a review of both rigs, a few months ago, that may interest you too.

Myself, after reading the reviews, news group posts etc. I elected to get the Icom rig over the FT-100. When the FT-100 first came out both the 100 and the MKIIG were priced within $50 of each other. Now Yaesu has dropped the price so you can pick one up for around $1100 whereas Icom has not dropped their price. The question is why does Yaesu feel the need to undercut Icom's price by a couple of hundred dollars? When I went shopping for my rig I found out that more MKIIG's were being sold that 100's. I wonder why since the 100 is cheaper.

Hi David,

At the risk of repeating some comments in another recent thread, the
receiver in the 706 is sensitive, however on a band with lots of
strong signals, such as 40m, it does not perform quite as well as a
rig designed for base station use. But you have to balance this
against the size and capabilities of the set. I have a 706 (early
model), but I've decided to keep the main hf rig (Yaesu) for use in
the shack.

Seasons greetings, Chris

The fire department radios and frequencies are licensed under a service that
requires type acceptance. Since your HT is not type accepted, using its
breaking the law. Basically, you have no authority to transmit on those
frequencies with your HT since the fire department's license doesn't cover
non type acepted radios.

>
>If it's genuinely illegal, I certainly won't do it. Where did you get your
>information?

You can email the FCC and ask them if it would be legal to do what your are
doing. I believe you will get a response that simply references the
pertinent part of the Code of Federal Regulations (CFRs). Any good library
will have a set of the CFRs, and they are available on the internet. With a
little time learning how to wade throught the language of government, you
will be able to find it yourself.

Have fun.

Terry,

It may have been re-numbered recently as the Part 90 rules have been changed and added to rather extensively, but it was Part 90.417(a) Title Interstation Communications and reads:

"Any station licensed under this part may communicate with any other station without restriction as to type, service, or licensee when the communications involved relate directly to the imminent safety-of-life or property."

Again, with renumbering lately, this may have changed, but what you are
looking for is CFR47, Part 90.203 titled "Type Acceptance Required".
Part 90 is available on the FCC website, along with the type acceptance
master radio list as well.

Yep, there are more and more people around who can't read their diplomas, never mind rules for NG and reflectors. If Clintonistas can break the rules and get away with it, why not Hams? So much for self policing and Ham Spirit, gone with CW!
Good luck in turning off those who still have some ham spirit left!

>
> On the other hand, is Pass Band Tuning just a variable filter which makes
> the add-on filters unnecessary?

PBT works by offsetting the pass bands of the two IF filters, thus manipulating the overlap between them. IOW, the actual filtering would be the combination of the low cutoff of one IF filter and the high cutoff of the other. While you could narrow the CW receive bandwidth using PBT with the stock filters, you will have the skirt roll off of the SSB filters which isn't as steep as the narrow CW filters.

If you have only one narrow CW filter you will have better performance than narrowing the PBT with the stock filter, but you won't be able to narrow the bandwidth. With two similar narrow filters, you can use PBT with them and narrow the bandwidth even further.

Another thing to consider, on the 756, the narrow CW filters can be used for RTTY (in FSK mode). The 250 Hz filter may be a bit too tight for good RTTY reception. You may want to use a 350 or 500 Hz filter instead.

73,
Mark

Is NASA TV Link (GE2 x5) Encrypted?

I'm trying to find anyone who's tried to monitor the NASA TV link from White Sands to JSC (Houston) during shuttle missions, when shuttle video is relayed over GE2 transponder 5. At JSC it is processed and released over transponder 7 as 'NASA TV'. Is transponder 5 encrypted, and if so, when, and what kind of encryption?

Please respond directly to me via email.

Howdy Mark.....I'd also like to know what you see for VSWR on the lower frequency bands, however, assuming that they might be bad as well, I'd suggest eliminating the feedline first......disconnect from the antenna, check for basic continuity end-to-end (use low ohms position of your meter....or at least a dc test light).....next check for a short or relatively low resistance path across the feedline (use high ohms position here and progressively go lower - keep your fingers OFF of the probes!). These previous tests are done with both ends of the feedline disconnected at the same time of course. If it looks ok with this simple sort of testing, then terminate the antenna end with a known-good dummy load and retest using your transmitter (low power) and VSWR meter or a through line type of wattmeter if you have one available. The wattmeter can be used at both ends in order that you might show up some major loss in the feedline (use the dummy load for this). If this STILL shows high then you have to decide whether its the feedline (coax) itself or a connector you've maybe put on OR...whether its a problem with the VSWR meter you're using (try a substitute unit if there's any doubt OR if using a wattmeter looks GOOD but the VSWR looks BAD). IF all this checks out, then its time for a good physical inspection of the antenna and installation and reviewing any notes regarding the history of the antenna and its installation (DID it WORK at any point....if it did then something failed.....DID it WORK at a previous installation? Was there any point in the installation that you felt you may have overrotated a joint or stressed a trap etc etc....being honest here might save you a pile of time).

Lastly a note on the installation, really without knowing how you've set up your radials etc.....DO NOT put your vertical up right next to your house (strapped onto it etc). Worse still, would be close placement to a metal sided building etc - I remember the grief I had, as a youngster, trying to get a much-heralded GOTHAM VERTICAL to "work" (Anyone remember THOSE heheh).

73 - Keep on Tinkering.....THAT......is REAL HAM RADIO

Try again, he wants a radio that he can use on the FRS and the HAM
radios won't do it. Also if we are going to loose the ham bands
because of low numbers of hams what did the codeless tech license do
for us? Seems all the frequencies that we are loosing can be used
by the no-code ham...

Could you make any recommendations as to commercial equipment which
might be appropriate for such a use, or perhaps point me to some
general information on the subject? I have no plans to buy anything
in the near future, but would be interested in becoming more informed
on the subject of available commercial radios. Thanks.

Again, illegal to transmit out of the amateur bands (your fire
frequencies) with that radio.

6367. Re: Which filter for the IC756 on CW??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-27 00:00:00 UTC
From: Steve Dove <dsp@hifidelity.com>
Message-ID: <38679A60.235B26F5@hifidelity.com>
Source record: 90930

Hi Pete,

Start off with a CW filter at the 9MHz IF (keeping the selectivity as upstream as possible). I am a fervent believer in the INRAD filters, but in the '756 there is scant room to hide flying-leaded filters (which an INRAD for 9MHz would be). I have been surprised and pleased by the Icom FL-232 optional filter (350Hz @ 9MHz) which is, naturally, a drop-in. The PBT allows for narrowing the bandwidth further if needed. It is a nice bandwidth; narrow without being 'claustrophobic' and wide enough to not compromise RTTY reception.

Subsequently - and only if you feel the need for it - for CW reception performance nearly as good as it gets, add to the above an INRAD 400Hz filter at the 455kHz IF - this IS a drop-in, too.

It is necessary to 'tell' the '756 what filters you've put in it, or it'll blithely ignore them; this is done through the menu scheme.

Ordinarily the radio's 'idiot-proofing' won't allow access to CW filters in SSB mode (necessary for PSK31, AFSK etc.); however a wonderful wrinkle I was recently turned on to allows this; if one 'tells' the radio that the optional filters are SSB filters (regardless of what they actually are) they magically become available . . .

All the best, 73

Steve W3EEE / G3YDV

Ham radios do not need to be type accepted so using a commercial
radio on HAM is ok. You need certification to have a radio on
commercial frequencies and don't for ham radio.

>radios at any one time..

For most bands, both the radio and the person must be "licenced".
The "fleet licence" you talk about covers your ability to transmit
on the frequencies that your department is authorized for.
But, independent of this, the radio is also supposed to be
type accepted for use on that band. Ham equipment is not.
So you've met one requirement, but not both.

>I would NOT advise a ham operator in doing this, but if you are
>a legit Public Safety officer (atleast where I live) its AOK to
>transmit on other agency's frequencies to communicate with them.
>We do it all the time.

But it's still illegal to use ham equipment to do it.

Source record: 90945

Michael,

There are two CTCSS optional boards for the 736R. The FTS-32R is a Tone Squelch Unit and the FTE-36 is a Tone Encoder Unit. Either one permits only one tone freq. set by dip switch. You may not be able to find either one so you can install an Encoder made by Communication Specialists. They are $28.95. See QST or www.com-spec.com for more details.

For auto patch tones, you need a mic with the tones and buttons like the YM-48 or the MH-27. I have a spare MH-27 that I'd sell for $25 FYI.

BTW, my 726 does not go into the 450 Mhz band, so it's rather useless for FM there. Hope you have the 450 module.

Sorry Bill,

Both the power divider and variable attenuator/knob are long gone, as is the LF syn loop module and BO power supply and a lot of chassis parts have gone bye-bye.

It appears the major difference between low numbers and high numbers, is the TCXO vs Oven type Ref. Osc. and the .1 khz resolution. I will have to dig through the box and inventory soon.

Jim, ac6tk@cybertime.net

I understand the relative merits of switching power supplies vs. the transformer powered type. What I want to know is: Are any of you using a switching supply with an HF rig without hash problems? If so, what brand/model are you using? I see that MFJ and Astron both offer the switching supplies now, and perhaps others do as well.

Date: 1999-12-27 00:00:00 UTC
From: kdmorton@teleport.com
Message-ID: <3867ea23.23903822@news.teleport.com>
Source record: 90958

Bill,

Don't feel bad, 'cause I had the same questions with my new FT50RD!
The manual is not at all clear on this, and in my opinion makes it
worse when it tells you to 'charge the battery' and THEN put it on the
radio. I figured it out, and let it charge all Saturday night. I
played with the radio most of the day yesterday (not much TX though)
and turned it on this morning. The battery (FNB41) finally went dead
about 2:00PM. Not too bad I suppose, but I can see now I'm going to
need another battery.

Which brings up the question, has anyone used teh FNB40 batt. ? I'd
like to have a slimmer radio for use at work, but would I lose a lot
of time? I use it mostly for recieve at work, but will be transmitting
at lunch. :-)

73, Ken
KD7FLE

P.S. I love this radio!! My wife got it for me and was worried that
she did not get the "right" radio. For this (reletivly new) ham, it's
a great little radio!

Here you go, from vx5 users group!

From: kingnep@hotmail.com

Hi Folks,

Thanks for all the wonderful information and tips I've found on the
forum.
Now, I have something to contribute in return.

The manual on the VX-5R is a bit, shall we say, weak. There is no
mention
of undoing or removing memory group channels. I have discovered how to
remove
both individual memory group items as well as removing an entire memory
group.

To remove an individual frequency from a memory group:

Press F/W then 4. Rotate dial to get to the memory group you wish to
work with.
Press MR to lock in the memory group. From within memory group, tune to
the
frequency you wish to remove from that memory group. Press F/W (1 sec),
then MR.
The frequency is removed from that memory group

To remove all frequencies from a memory group at once:

Press M/R to get in memory mode. Press F/W, then 4 to get to the memory
group
selection screen. Rotate the dial to the memory group you wish to
remove. Press
F/W (1 sec) then MR. The memory group will no longer exist. This is much
quicker
than erasing individual frequencies when you intend to change the entire
group.

Hope this will be of value to all! Again, thanks for all the good input
I've
gotten from the group, and thanks especially to Eve's author, Ed, for
the great
ham public service he has provided.

Hi,
Anyone know the address for that outfit that used to sell the
silkscreened and drilled circuit boards for the little projects
that appeared in "73" magazine? I think the outfit was
called FAR CIRCUITS or something like that. Do you know the name and
web
address?

And, do you know if they still stock some old (1994 era) boards for
projects? Reason I ask is that I ran across an old 73 magazine
the other day, and it had exactly the gizmo that I have been
looking to build for past several months. Seems to be an easy project,
but the board is tightly spaced hence dont wanna make the board
myself.

Thanks,
Joe K7JOE

Hello Group!

Does anyone out there have an ascii representation they are dying to
show someone on the pin outs of the Heathkit HW-101 MIC connector?
I bought a Yaesu Hi Impedance mic (50K ohms) but it uses a stereo Tip
Ring Sleeve rather than a 4 pin DIN. I could short a couple of the pins
together to determine the PTT switching, but I would not like to harm
anything important.
I have a manual on order, but would like to get started....antsy.

The HW-101 used a simple connector for the microphone. If yours has a DIN connector, someone changed it.

Ground each pin in turn to see if it keys the transmitter. That's the PTT line. The other is the audio.

Steve,

If you mean that the small percent who DO flout the law are reason enough the rest of us should be penalized, you'll probably get an argument here. Certainly from me. We can still own crowbars, screwdrivers and hacksaws in this country, even though burglars use 'em every night. Let's not throw out the baby with the bath water, eh? And a lot of those ten meter "CB" signals are from places our law does not reach.

6413. Re: Out of Band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-27 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <3868255A.3524758D@usa.alcatel.com>
Source record: 90976

Legality is described by the FCC Rules, which require Type Acceptance for a radio used in the Public Safety Services which is different than the one required for the Amateur Service. Yes, our radios require type acceptance, if commercially made, and receivers covering 30-960 MHz require Part 15 testing, too. As licensed Amateurs, we are able to build and modify our own radios, so long as we comply with standards the FCC sets for Amateur Service radio transmitters, and for receivers.

Other Services do not have this ability. Their sets must be maintained by people with an FCC Commerical license. Because we are technically (many of us) able to build, maintain and modify our own sets, and because we (generally) do not make use of the privilege to violate FCC Rules, we still have it. However, we can lose _any_ privileges by abusing them. Amateurs showing up on Law Enforcement channels -- I've heard it -- calling in a report of a car accident, is a PRIME example. Some of us have been found sending spurious distress calls, jamming law enforcement or military frequencies, and operating on frequencies outside the Amateur bands without any authority except that we want to do so. THESE are the kind of abuses that will cost us privileges we enjoy today. The fact that any one of us does not abuse our operating priovilges, won't protect us from the small number who do, and is a large reason why we have a self-enforcement activity. If we don't police ourselves, someone else will do so. And we won't like it.

Cheers,

Cortland

6414. Re: 10 & 12m on a 102" whip..best way?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-27 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <38682808.3E6E2810@usa.alcatel.com>
Source record: 90977

Try this: for 12 meters, clip a small inductor from the whip's feedpoint to ground. Try about three turns about a half inch in diamter. This will raise the feed impedance a bit and lower its resonant frequency. For 10 meters, connect a small (25 pf?) capacitor form the feed point to ground. This will raise the resonant frequency and still raise the feedpoint impedance a bit. Over a good ground, the feedpoint impedance of a quarter wave whip is less than 50 ohms, so raising it won't hurt.

Here's an idea: For 10 meters, use a foot of RG-58 as a capacitor, with the end not connected to the feedpoint and ground open circuited. For 12 meters, short the end not connected to the feedpoint. You may have to adjust its length, though. Hey! RG-58 is cheap.

Good luck!

I've been using an MFJ-4245MV for a year and have no problems with it on HF. It runs cold at 20 amps continuous on PACTOR. I don't hear any hash or birdies from 80m - 10m. It seems completely immune to rf interference from my rig. I'd certainly recommend it.

There are a lot of choices available, including the LC network. The main tip that I would have is that you borrow an MFJ-259 antenna analyzer or equivalent before you start working on it. It will save you a lot of time, because it will be easy to see where the new resonant frequency will be, whether it is in the ham bands or not. I used the MFG-259 to build and tune an LC network for a dual band antenna through a diplexer, and it made that trial and error task relatively easy and free of excess pain. In my case, I used the LC network to shift the center frequency of the antenna about half a Megahertz on one of the two bands.

I agree with most of the comments by the other operators. Antenna tuners are one solution.

For a wiring diagram of my HF mobile installation, including the LC network, check my web site, described below. Check out Configuration B.

Richard
KA0DXM

For those who are interested in information on HF mobile noise suppression, I suggest that you check my web site below. This article was first published in the Mobile Amateur Radio Awards Club newsletter. I also have information on my nine-band three-antenna HF mobile installaion.

http://www.qsl.net/ka0dxm

If you do not have WWW access, or if you have questions, drop me a line and I will try to help.

I read an idea sort of like yours... it seems workable...

Feed the 10 m whip with a section of rg58 which is specially cut.
(Using the Smith chart which I am not good with) I should be able
to transform the 102" base impedance slightly such that at the
transmitter the impedance is satisfactory. This should make no
difference for 10 meters where the whip is resonant anyway. I
would be using slightly less than a 1/2 wave of rg58 for 25 mhz (
a little less than 19ft x 0.66 = 12.5ft of coax). This could
transform my impedance to within the 2:1 circle on the
chart...please correct my logic anybody!

Probably more easily I have used some calc programs off the web
(via Reg Edwards, thanks) and find I could probably just add a 70
pF cap across the feed point of the whip to move it down to 25mhz.
Again I guess I could transform that value to the other end of the
coax to the radio and replace it with an L and C there which is
what I really want.. A fixed LC network at the radio.

I have not asked but it would be great to retain the nice field
strength I now get with a resonant 1/4 wave on 12m. I wonder how
much I loose by tuning the whip instead of using it resonant?

Tim

question is the

I bought two Astron SS30M's, one for the house and one to take on trips.
Excellent PS. I wasn't surprised to see how it fared in QST/ Looks like MFJ is
pretty good (whodathunkit?) Shame on Icom and Yaesu!!

My first SS30M had a bad voltmeter, Fred at Astron had a replacement meter sent
to me straightaway. Excellent service.

Source record: 90988

No recommendations. I personally use Motorola, Kenwood, Yaesu/Vertex and Icom commercial gear. You can also look at ADI, Uniden, and others. Determine what your needs are, then select the radio that will meet those needs. As a general rule, the low end commercial handhelds do not have as tight a front end as the higher end ones, and are thus more subject to intermod, as are most amateur handhelds. If you plan to operate in a very rf intense environment (e.g., most major cities in the core area), that should be a consideration.

The other major consideration is that commercial radios, by type certification requirements, are not designed for user frequency programming. All the user can do is change among the programmed channels. You can buy a programmer and do your own programming, but when the radio is in your hand, not on the programmer, you will only be able to select frequencies that are programmed into it. Thus, if you do plan to use it in the HAM bands, you will probably want a radio with many channels so you can pre-program all the frequencies you may want to use, simplex or repeater, along with GMRS or commercial frequencies you are licensed on.

Most commercial radios work just fine in the applicable HAM band - i.e., VHF Hi radios usually work 2 meter HAM, UHF (450/460 MHz) usually work HAM 440 MHz. There are exceptions though, so make sure any radio you choose will in fact go where you need it to go.

Carl.

>a Maha universal charger for about $50 - which may be a good investment
>because is will charge anything (has moveable contacts).

I can't see any problem charging a NiMH battery on the radio. The radio's
built-in charger supplies about 60 mA constant-current charge to any
battery, regardless of voltage or capacity. The only problem may be
that a really high-capacity battery will take forever.

Yeasu *does* warn you not to charge NiMH battery packs in the NC-50
fast charger. This may be because it has negative delta V charge
termination with thresholds set for NiCd batteries. NiMH cells
show less voltage drop when they reach full charge, so a charger
designed for NiCd cells may not shut off reliably when charging NiMH.

The MAHA chargers, on the other hand, are designed to handle NiMH batteries.
The "universal" one also has a temperature sensor that sticks to the pack
with a magnet, so you get temperature sensing as a backup to the negative
delta V sensing. So if you want to fast-charge NiMH batteries, it's
probably best to stay away from the Yaesu fast charger and get one of
the MAHA ones instead.

Hello Tom

I own a IC-775 DSP. Before I had a IC-756 and I have to say, it was a great deal. If you NEED 144MC you have to buy the IC-746, if not, buy the IC-756. In my oppinion it is better to handle an easier to configure.

Or take a second hand one, a IC-736, also a great deal. I woudn't buy a IC-756PRO, it is to new (bugs and so on).

Greetings from switzerland, HB9DDS, Daniel

6437. Kenwood TS 850S problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-28 00:00:00 UTC
From: nospam.wxperson@pcwp.com
Message-ID: <38690756.24502775@news.mindspring.com>
Source record: 90797

I purchased a Kenwood TS 850S when it first came out about 8-10 years ago. It has been in storage for about 5 years and I decided today to start up again. I have a few questions/problems.

1. When I pulled it out today and noticed that I cannot hear any audio from the built in speakers (I can hear it when I put in the head phones). Any ideas?

2. I do not have a station setup right now but I did put together a crude "receive only" antenna to see what I could hear (speaker wire connected to coax connector). I cannot pick up any signals. I could not even hear the local 50000 watt AM 750 WSB station. I do hear some tones and whistles as I tune through the frequencies but no voice, CW, etc.. Any ideas?

For those of you who may be in the Atlanta area, is there anywhere (your store?) where I could hook it up to a real station to see what it does or is there anywhere else I can take the unit locally (Atlanta) to get it completely checked out?

For those of you not in Atlanta, is there an outfit you would recommend to send it to in order to get it completely checked out??

Thanks for any help.

go to www.eham.com

read the reviews on both radios. It appears the Yaesu has a severe quality control problem. I also went to the ONELIST which is a web page for owners of the ft-100
they did a survey of the owners and how many failures they have had. The # are high. If you really want the Ft-100 I would wait till they get the bugs out.

I have 2 UHF MSF 5000 Repeaters/Base Stations for sale.

MSF 5000 UHF 40 Watt Repeater. Model#: C44CLB7106AT

Includes the following options:

C677AG: UHF Duplex Filtering & With Triple Circulator
C695AB: Expansion Tray
C269AT: Spectra Tac Encoder
C699AA: Omit Alarm Reporting Wireline
C149CX: Radio Metering Mode
Currently on: RX 467.350/TX 462.350

Price: $975.00 plus shipping.

MSF 5000 UHF 110 Watt Digital Base. Model#: C74CXB7106A

Includes:

C345BG: Auto Station ID
C668AA: DMP
Currently on: 464.975 RX/TX

Price: $1795.00 plus shipping.

I can deliver within a 100 mile radius of Minneapolis/St.Paul area. Both units were just recently pulled from service and work fine. Sorry no manuals or programming software.

Any questions please e-mail.

Thanks,
Fred

6451. Question: Charging a deep cycle battery?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-28 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <3869504C.7DB56EB1@yahoo.com>
Source record: 90811

Have a 115 Amp Deep Cycle marine battery. Need to charge it for emergency use. Can I simply hook it up to my 3 amp 13.8V power supply for several days to charge it? Or, do I need some other type of "charger" circuit ?

Given that the PS can only put out 3 amps max, there is little risk of "fast charging" this battery.

Can I do any damage to the power supply by hooking a charged battery to it continuously without diode protection?

If I did put a diode in line with the positive lead, allowing the energy to go from PS to battery (but not from battery to PS), wont the drop of 0.9V from the diode inhibit the ability to charge a 12 volt battery? (ie, PS voltage drops from 13.8V to 12.9V due to diode).

One more: once battery is charged, do I need to disconnect the PS from the battery once I draw heavy current (20+ amps) from the battery? Will the little power supply be "maxed out" as I try to draw all that current from the PS? A switch or relay is generally used, right?

thanks....I know this stuff is basic but the darn 2000 handbook mentions nothing about simple concept like charging a battery...

thanks,
Joe

For trade for Ham or Computer equipment

YEASU Ft-530 DualBand Handheld
Covers 110-174 VHF (125-170mhz transmit)
Covers 400-470 UHF (400-461mhz transmit)
Covers ALL of the 800-950 mhz range (receive)

40 memories per band
1,2.and 5 watt settings
AM and FM receive modes on VHF
12 volt or battery (battery will not charge) No charger,
but this package come with 12 volt DC cord and Speaker/mic
and manual.

Items i'm looking for (Ham)

Roller Inductor HF tuner

Computer items

AGP Video Card 16megs
Flatbed scanner
Monitor

Other items will be concidered for trading. What do you have ??

Thanks

I'm sorry if I did not post this message in the right NG but I could not find a NG related specifically dedicated to Heathkit.

I have been looking for a weather station for a while. A ham I met recently has a Heathkit weather station that he wants to sell. He doesn't have a clue of the value of the weather station and so do I.

As far as I can tell, the only problem with his station is the bearing of the anemometer that needs replacing. Every thing else is very dusty but semms in good working order.

Could someone tell me how much this weather station is worth ? I want to offer a fair price to this man. I don't know if there is a site dedicated to Heathkit weather stations. I have not found one yet but I would really appreciate receiving URL's that are related to the above mentionned subject.

6462. Re: Question: Charging a deep cycle battery?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-28 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38696E6D.7A44559B@yahoo.com>
Source record: 90822

Gord,
What an excellent post. I have printed it. Very clear. Thanks.

Actual scenario: I bought a deep cycle battery as a precaution
the other day. It was "new". Voltage was about 12.1 volts. PS
was about 13.8 volts. Put an ammeter in line with the PS, and
measured 2.2 amps (about full tilt boogie for that little power
supply that I have).

Went to bed.....

Got up this AM and noted that the ammeter was now reading a mere
1.6 amps. And, battery terminal voltage was up to 13.6 volts or so.

So, it sounds like I did no damage to the battery in getting it
charged back to 100% after sitting on the WalMart shelf for the
past who-knows-how-long.

Sounds like this approach will work provided the battery is not
deeply discharged. If it is, I need to go to a current limiting
power supply to avoid toasting my cheap-o supply as the battery will
surely draw more than the 3 amp max that the PS is capable of providing.

Typical application, by the way, is 100W HF and 50W VHF or so.
Discharge only will happen if the power goes out for a long while. In
that case, I could apply a much larger power supply, say, Astron RS-35
or so....which
will likely be able to provide all the current that the battery requires
when in deep-discharge state. By the way, any way to determine
maximum
charging current of a deeply discharged deep cycle battery? Assuming
that it is a 115 amp battery, I can't imagine that it would draw
more than 20 amps for very long....and a fan on the bigger PS would
likely keep it cool enough to prevent damage till the current started to
drop off. Wonder if there are formulas to calculate ....?

Guess we need another chapter in the ARRL handbook, huh.

thanks again and 73,
Joe K7JOE

The Bendix/King to which I refer is the de facto standard for
firefighting operations in the West. It is a 14 channel per bank field
programmable FM high band radio with LCD display, and switches on top
for hi/lo, scan, and priority lookback. PL tones are selected by
pushing the keys 1-9 on the front panel. Every fire department I know
of uses them almost exclusively as well as private contracting fire
companies I have worked for. I would love to have one but they are
$700.

Pardon the break-in, but from the foregoing most-excellent dissertation on charging, should I assume that a regulated CV/CC bench supply (like an HP 62xx-series) is likely to be a good way to charge ordinary sealed lead-acid batteries?

I just picked up a nifty 300W inverter/18 AH 12V sealed lead-acid battery in an emergency-power package (http://www.store4power.com), and was thinking that a good way to fast-charge the battery would be to connect it across my HP6263B, with max voltage set to 13.8V (or 14.4?) and max current set to 6 or 8A or so.

I was thinking that would be a good compromise between the ~500 mA wall-wart charger (~30 hours from 100% discharge to 100% charge) and the 1-to-3-hour fast-charge rate obtainable by plugging the package into an automotive lighter socket.

Any thoughts on this? Will the battery be happier with a lower max charging current, or are there basically no drawbacks to fast-charging this type of battery? Exactly what max charging voltage is likely to be optimal? Do these issues depend on the exact brand and rating of the battery, or can all sealed lead-acid batteries be treated identically in terms of charging current and voltage? I've just started fooling around with these things, and haven't gotten around to doing much homework on gel-cell charging yet.

AFAIK NASA Select is 'in the clear'. Last time I tried to watch it on
a big dish system was in '91 but I'm fairly sure its still clear.
Nasa TV does have a web page but I don't know the URL, go to nasa.gov
and look for it.

I find that sealed lead-acid batteries last much longer with low current
long charges.

This is especially true with trickle current, keep it very low.

Simple!!! First off, try to determine if the injection freq is high side or low side....then take that figure, and divide by frequency desired. Then multiply injecton freq by answer from division. More than likely the IF is low side (Maybe around 20ish Mhz). Also, Bomar crystal or ICM crystal should be able to help you out. Best of luck!!!

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the ham radio QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $13
12 volt 7AH --- $14

I have only a few 4's but loads of the 6's and 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

Pete,

I've used both an ATT 900 digital phone (900 MHz) and a Sanyo
spread-spectrum phone while transmitting on SSB at around 500 watts on
20m and 75m and have had no problems.

>transmitters, and for receivers.

Amateur radios DO NOT require Type Acceptance, and none that are currently
marketed could meet Type Acceptance criteria. (One of the Type Acceptance
criteria is that there be no user accessible way to directly change frequencies.
In other words, only preset channels can be available to the user.) All receivers
operating above 30 MHz do have to be Certified (a different thing).

External amplifiers capable of operation below 144 MHz do require Type Acceptance,
however, thanks to their misuse by our little buddies in the CB service. The FCC has
sent clear signals to the manufacturers that they will clamp down similarly on amateur
radios if the current out of band mod craze doesn't abate. At least one radio had to be
withdrawn from the market because it was too easily modifiable to receive cellular,
several others had to have their firmware changed.

We risk being saddled with Type Acceptance for our radios if we don't stop this out banding
nonsense. We definitely wouldn't like that. Not only would the radios cost more, they'd be
much less flexible to operate. Hams have a rare freedom in what they can do with their
radios, as long as they stay in band. The out of band scofflaws threaten that freedom.
I find it particularly upsetting that public safety officers feel that they can flout the
law
for their own convenience. They should be particularly scrupulous in upholding the law.

Source record: 90835

I read those reviews, Tim, and aside from an interesting group of three that all appeared today (coincidence?) their were 3 poor ('zero' ratings). One of those changed to a '5' as soon as the problem rig was replaced. Another 'zero' was one of the first rigs out of the line (NEVER, NEVER BUY THE FIRST MODEL OF SOMETHING! JUST LIKE AUTOS).

Aside from a single '4', the rest of the reviews were '5's. So, when the quality control issues of the earlier rigs are removed, the owners seem to love the rig. Three dealers I spoke with indicated problems early on, but have had absolutely NO problems with recent models (FT-100 OR the ATAS-100).

So, the 2.6 overall rating is a bit misleading in my opinion. I'm also a bit suspicous of the three 'zeros' that appeared today. Maybe the owners really had problems, and maybe they were encouraged to report their bad experiences today. But I also know an owner of the rig who swear by it (no, not at it) and says it operates great on all bands.

If, however, the combination FT-100 / ATAS-100 that I ordered turns out to be a dud, I'll be the next bad review there. On the other hand, if it's a great rig, I'll report that too.

Hi folks,

Anybody know where I can find this part? I'd really like to resurrect this handheld, but none of the service centers seem interested in selling me the part. Understand they need to make a buck for their techs on the bench, but we can replace it ourselves if we can find the darn thing.

Any pointers?

6497. Re: Yaesu 50 RT Battery Charger Hole??!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-28 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <849nerrfa1@bgtnsc01.worldnet.att.net>
Source record: 90864

There is a known battery drain problem with the FT-50 when shut off. The fix is to replace a couple of surface mount resistors which is not for the un-initiated on surface mount work. Not sure if it affects your rig (e.g. don't know if Yaesu fixed it on later models and if yours is late enough.

There are ways to check it by cobbling together an ammeter in series with the battery to see if it's draining. But the easiest way to tell may be to charge the battery and then leave the radio/battery combo on the shelf (battery on radio but not connected to charger) for a couple of days and see if the battery is running down using the built in FT50 voltmeter.

If you have the prob, Yaesu will probably fix it for you for free. If you're very good with soldering SMT, they'll send you the little microscopic resistors for free.

That being said, here are a few other comments:

It takes about 16 hours I think for a full charge with the wall-wart charger.

It may take a couple of charge/discharge cycles for the battery to reach full storage potential

If you're looking into buying additional batteries, consider the NiMH batteries. A few words on this subject... Volt ratings means Xmit power, mAh (milliAmphours) means storage capacity. The Yaesu FNB-41 is a 9.6V 600mAh battery - meaning you'll get 5W but it may not last as long as some alternatives (read on).

I have a Maha FNB-40H which is a 7.2V 650mAh battery. But it is very slim - near exactly 1/2 the thickness of the Yaesu FNB-41. the 7.2 means low xmit (maybe 2.5 or 3W). For me this makes it an excellent battery to use when I want to carry it primarily as a scanner/receiver. (or when doing only real short range comms and you can keep it on real low power). This may be your choice for your application at work.

I also own an E.H. Yost FNB-41xh. This is a 9.6V 1000mAh for the FT50 which is the exact size of the Yaesu FNB-41. So you don't gain any slimness, but you gain 400mAh in storage with no increase in size or decrease in power. I think it is barely perceptibly lighter.

So you might want to do the following:
A) make sure you don't suffer the battery drain problem.
B) live with your FNB-41 for a few more charge cycles to see how annoying it is.
C) order a slim battery from Maha (or E.H. Yost may have one too) no matter what. For mainly receive work, it makes the radio MUCH more pleasant to

carry around. It's a big difference.

Someone may want to chime in here on any risks of charging the NiMH on the radio with the wall wart. If the consensus is not to do it, you can get a Maha universal charger for about $50 - which may be a good investment because is will charge anything (has moveable contacts).

Hope all this helps. Here are some URLs:

http://www.maha-comm.com/products/nimhbp/yaesu/index-16.htm

http://www.maha-comm.com/products/chargers/index-9.htm (I have the C777 and use it for everything - even plugs into my car's lighter.

If I'm not mistaken, tr.9 is NASA TV, and tr.5 is a multiplexed triple signal that is sequentially displayed at about 2 to 3Hz each image. You need a timebased decoder to separate the three videos. I believe that the audio there is digital data, but I haven't checked in a while.

<< I'm looking for a digital or digital spread
spectrum phone>>

Can't tell you it won't interfer but I bought two 900Mhz digital spread spectrum w/ caller id and call holding id on a close out from R.Shack a week before Xmas. They had been 179.00 but were being closed out at 99.00, which is a lot of phone for the buck. they said R.Shack on them but they looked like Sony. When using them they sound like a wired phone on both ends of the conversation. I suspect the Shack would take a phone back if you had a problem.

Can't really advise you as to what rig, but you will need about 100
watts out and atleast a 3 element beam to compete with many other
stations for the dx contacts. YOu can have lots of fun with 10 watts
and a dipole but lots of times you will get lost in the shouting match.
ONe of the loudest stations that I ever worked was only running 1 watt
but he had an antenna on about a 30 foot boom.

Sorry if this post is kind of late but I have been out of the radio thing for a while.

I have a TS-450S/AT I am considering selling. I'll not call it "very clean" more like "very good". It has a couple of minor scratches on it and a couple of brown spots on the cover where some rubber feet of other equipment used to sit on it. I am the original owner, has all the plugs (used), mic, power cables, manuals and original box. Also installed are the 500Hz CW filter and the 1.5Khz SSB filter. Last year I bought a power supply for it. A 35 amp continuous I think, Looks like one of those Alinco power supply's with the cig lighter jack on the front, also has voltage and current meters.

Like to start at about $650.

If interested please e-mail to kq4zp@erols.com

Thanks,

Ed Clark

Tracy,

There are two types of crossband repeat available on the IC-2800.
Below are instructions for both modes. These instructions are not in the
user manual, I had to call Icom directly to get them..... Enjoy!

Regular Cross Band Repeat

Press and hold the "CHG/L" button while holding both "VHF MAIN" and "UHF
MAIN"

Activating Cross Band Repeat with 0 Hang Time

Press and hold "CHG/L" button while holding both "UHF MAIN" and bottom
key on VHF side.

To clear the cross band repeat function, momentarily putsh the "CHG/L"

I'd like to hook up an up/down control seperate from my ICOM mike to my ICOM 746. I looked at the specs on the plug and was surprised to see that there was but one pin for up AND down on the 9 pin connector. Humm.

Grounding the pin makes the frequency go up, which is nice, but how the heck do you get it to go down?

No, and we won't cry when you lose your license, and jeopardize the system license of the fire company, for using a non-Type Accepted radio. If you want to play with the big boys, you've got to buy the big toys. No shortcuts, do it by the book, or don't do it at all.

A local volunteer fire company did lose their system license because their members were using modified amateur radios, and none of the volunteers were even hams. They thought they could get by cheap. Now they have to get by cheaper, back to CB for the lot of them.

I have exactly zero sympathy for a public safety officer who thinks he can flout the law for his convenience.

6538. An intelligent(?) set of questions about Pro-92,Pro-94, BC245, and trunktracking

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-29 00:00:00 UTC
From: mp <mplanck@my-deja.com>
Message-ID: <84cda6$9qr$1@nnrp1.deja.com>
Source record: 90746
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.equipment

Hello!

My local PD just went to a trunked system. So now I find myself thrust into the world of trunktracking. I always like to take a minute to see what products are out there before I buy a new radio, so I tried to take a look at what was available in trunking-compatible scanners. What I came up with was: The Pro-92, the Pro-94, and the BC245.

PRO-92
I *REALLY* liked the Pro-92 and was all set to buy one until I found the gobs of complaints about it on this newsgroup, among others.

=====PLUSSES=====

-Alpha tagging

What got me excited about the scanner was the 12-digit alpha tagging. It has been a pet peeve of mine for years that, with anything beyond my 16-channel scanner, I found it impossible to even begin to memorize what channel went with what service. Yes, I know that a lot of people use their scanner's banks to organize their frequencies, which sounds nice in practice. It never works for me, however (for a variety of reasons). The only radio I have with alpha tagging is the Yaesu FT-50 (I am a licensed Ham radio operator...) modified for extended receive frequencies. The FT50 has only 4 digit channel naming (which is practically useless). 12 digits would be perfect. This one feature justifies the high price of the scanner for me.

-CTCSS-PL/DPL
My FT50 has PL/DPL also and I never quite got around to using it. With the Pro-92 it would be great, because those 'multi-user' frequencies could be stored as two seperate entries, if, say, the municipal sanitation department and the local highway department shared a frequency but used different PL tones I could program- "garbage truk" in channel 30 with PL 162.2 hz and "Hiway dept" in channel 31 with PL 173.8, and always know who I was listening to. These two features seem to compliment eachother nicely.

=====MINUSES========

-Bugs
I have seen MANY complaints about the Pro-92. The main one seems to be caused by how the scanner works. Please keep in mind that I know almost nothing about trunked systems but from what I've read here and

on several websites, the Pro-92 uses tonebursts at the beginning of the received transmissions to follow conversations while the others actively monitor the data channel all the time.
What do the 'real' radios use to stay in synch with the trunking system? That is, what do the real trunked mobile and handheld walkie talkies being used by the police and others listen to? It seems that to listen to the data signal while receiving another 'audio' signal would require almost two seperate receivers in one case, whereas listening to tone bursts on the frequency being monitored would allow a radio to be designed more simply (and produced more cheaply).

-Data skip
From the sources I've seen the Pro-92 has no "data skip" feature.

=========About me=========
Here come the questions, hopefully someone who knows more about these scanners and trunktracking can help me analyze my situation and offer their suggestion as to which scanner would be best.

Things I dont care about:

-Battery packs. Much noise has been made about Uniden's proprietery battery packs. I couldn't care less. I mostly use the scanner while I'm sitting here at the computer so it's plugged into the outlet. If I want to use it in the car I'll use a car cable. I rarely carry any radio clipped to my belt.

-Price. Well of course price is a factor but I've already comitted to purchasing a trunk tracking scanner and the price difference between the Pro94 and the Pro92 is fortunately not that big a deal to me at this time.

-Brand loyalty. I realize that the Pro 94 is made by Uniden, the Pro-92 by GRE. I really dont care where the scanner comes from. I'm not buying an extended warantee or anything so being able to return the radio to my local Rat Shack isn't a point of convieniece for me.

Confusions: (I'm not sure about this stuff)

BC245/PRO94: At first I thought that the Pro-94 and the BC-245 were the same radio, in different clothing. But then I found out the following (which may or may not be accurate):

The 245 scans conventional and trunked comms at the same time while the Pro-94 does not.

The 245 has some problem with too few channels per trunk?

The BC245 has 300 channels while the Pro-94 has 1000.

Is there a newer version of the 245?

====What I want====

As I mentioned, my local Police Department moved to a trunked system and I'd really like to continue monitoring them. I don't know anything about trunked systems other than the basic concepts of why they exist and a rough idea of how they work. However I am a radio amateur and a student in Electrical Engineering so I guess I can probably pick up on this aspect of the hobby relatively quickly.
Initially, the police department was the only target I intended listening to, but as I gathered more information, I found that other local services were already using a trunked system along with their conventional frequencies. So, here are the things I am trying to keep in mind while deciding what to buy:

-What kind of trunking system am I on? That would be a good thing to know, wouldn't it? I think the PD that I am interested in is on an EDACS type system. (See below for more information on my local system) I'm assuming that all of these scanners work on an edacs system. Furthermore- it seems as if the problems with the Pro-92 trunking involve tracking Motorola type systems. True? From the information below, are the trunked systems close to me all Edacs, or could some be Motorola, or is there no way to tell from the information I've found?

-Data Skip. From what I've read, all Edacs systems have that annoying four beep signal after each transmission. I have observed this and also there is a buzzsaw sound that I hear from time to time (when I try to listen to the system on my conventional scanner). I hear that some systems have MDT or other data transmissions popping up from time to time as well as special 'scanner busting' signals (although it seems to me that this is probably just trunking data). You can see...

http://ourworld.compuserve.com/homepages/brennan/gwiz.htm

...for .wav files and more in-depth information about this. Anyway, the Pro-92 does not have a 'data skip' feature. Am I doomed to scaninng failure if I try to use a pro-92 and there are non-voice signals appearing on the trunk I want to monitor? From what I've found, the Pro-94 and BC245 DO have a data skip feature. Is it robust enough to really skip over unmodulated carriers, MDT and other data, etc?

-Computer cable/control: Wow, this is a tough one. I think that computer interfacing is very important, yet I have found the least amount of information on this aspect. It seems as if:
The 245 comes with a computer cable
The 94 has a port but the cable and software are $70 extra
The 92 has no computer control abilities?

Exactly what can be computer controlled is unclear. A lot of times a computer interface is offered and all it does is allow you to program channels into the scanner in an automated fashion. While still very useful, this is not real computer *control*. I found one message that refers to WinScan software, a $60 package, at:

http://mghusa.com/pozilla/wsabout.htm

where you can find software to computer-control the BC245...an important side effect is that you get ALPHA TAGGING (on the computer screen only, of course)! As I said, I do most of my scanning right here by the computer so this may be a decision tie-breaker for me. I also saw a message referring to "Canadian freeware" that does the same thing as the WinScan software. I dont know if this referred to the crippled demo version of WinScan.

As for the Pro-94, all I can find is that there is a computer cable and software available for an additional $70 or so.

It has been my experience that a lot of times these 'computer cables' are overpriced and easily built at home. A lot are just straight cables that run to the serial or parallel port. Evidence: my digital camera, Optoelectronics Xplorer, HP48 calculator, and many other 'toys' cluttering up my desk all use a 'plain' cable- no electronics, just wires. On the other hand, some cables have internal electronics- the computer cable for my TI-92 calculator has a bunch of (SMT) electronics, (although a homemade version is available) the programming cable for my Yaesu FT50 has internal electronics, (a homemade version is possible here also), and a cable for a cellular phone I own also has internal electronics. Someone even came up with a computer interface for most scanners that do not currently have one (ProGrammit- allows you to program channels by emulating keyboard presses). In all of these cases, there is a homemade version of the cable that you can build- and when there are elecronics inside the cable, it has been simply a level converter, which can be accomplished with one chip.

This begs the questions:
Are there homemade equivalents of the Pro-94 cable?
Will the utilities for the BC245 work with the Pro-94? Or are they too dissimilar?
Is there an interface hiding inside the Pro-92 that can be developed by a hobbyiest?
It seems odd that Uniden would go thru the trouble of creating two seperate but similar radios, one for themselves and one for Tandy. I've seen similar products like this before where a few internal jumper settings can change one product into another. For example, I have a caller ID box that can go from the cheapie $20 unit I baught to a $40 unit that has triple the memory slots just by removing a solder blob. Does anyone think that the Pro-94 and BC245 share a similar relationship?

-Channels
More is better, obviously. However, I will probably be using two scanners simultaneously at the beginning anyway, one for conventional systems and the new one for TT. So if there is one TT scanner out of the bunch that seems perfect but it does not have a lot of channels, I will probably just end up dedicating it to TT and keeping an older one for conventional frequencies. How do the TT scanners store trunked channels anyway? Does each frequency take up a channel or does each 'talkgroup' take up a channel or what?

-Attenuator
I have never had a radio with an attenuator. I use a discone antenna in my attic (not on the roof) and I am near paging transmitters as well as a NOAA weather transmitter. I hear the NOAA announcer all the time, on many different frequencies. I wonder if an attenuator would help me and if it's important to be able to have it set for each channel or "all or nothing".

-The Delay "issue"
People have complained about the 5 second delay of the BC245 and Pro94. I read one posting that said that the delay is necesary because the scanner needs to listen to the data channel for this long (to do what?). Im not sure when this delay occurs and how annoying it is. It seems that the Pro-92's method of trunktracking is different and does not involve a delay of this type, however this method also misses a lot of replies... Can anyone clear this up once and for all or point me to a website that clearly explains the issue?

======Conclusions===============
So, you ask- what do I want to know? Well, I'd like your thoughts on which scanner you think would best serve my needs and why, and:

-Will the Pro-92's problems be a non-issue for me because I am scanning Ericsson and not Motorola trunks?

-Will the lack of a Data Skip cause me problems?

-Will RadioShack release a fixed version of the Pro-92 and make whatever I purchase obsolete? (Rhetorical question!)

If there are any other scanners that I should consider (TT capable of scanning edacs systems only, handhelds preferred but bases are acceptable if they are not just 'base' versions of an existing handheld radio) please feel free to mention them.

Thank you for taking the time to read this message. I look forward to receiving replies from the many knowledgeable users in this newsgroup.

======INFO===
Here is the information about my local system. Please see:

http://www.nf2g.com/scannist/nys_ege.html#Kingston

The system I want to listen to is lableled "NYCOMCO" but I'm sure I'll eventually want to listen to the Kingston system as well. Can you tell from looking at this chart what kind of system this is?

http://community-1.webtv.net/rks-57/UlsterAndOrange/page2.html

This guy really helped me out. His page shows the specific tower that I want to scan, he says the police department I want is on the Poughkeepsie tower and he gives me their "Talk Group ID". Can I scan just this ID and listen only to transmissions from this police department?

Source record: 90748

Howdy John......See Al N2NKB's reply....his comment on lower charging current is a good one. Wall wart chargers on (large) lead acid type batteries - NOPE.....been there done that....in my experience (and I haven't seen every single one heheh) they heat bad and I'd personally consider 'em a possible fire hazard indoors (my station has battery float setup for most everything). If a wall wart was all you had, then use it, but I'd monitor the current and its temperature AND the battery voltage quite a bit more closely. As for the use of your HP power supply (lusting here) it sounds like a super unit....I'm not sure how the current limiting works on that unit though.....all except one of the bench power supplies I'd used over the years (and homebrewed) had the "current limit" control connected to a shutdown or foldback circuit....I guess it depends on the strategy of that circuit...some of 'em are so "smart" (!) that they shut down the regulator instead and require the load to be removed and/or the power supply to be shut off and on again to reset. Lets see...what else....Lead Acid charging - from my shipboard radio days (quite a few batteries there to maintain) lead acid batteries ought to show terminal voltage of 2.35-2.5 volts/cell just off of charge and 2.1-2.3 volts thereafter at rest fully charged (you can see then that "fully charged" is a relative description).....Specific gravity, should you have batteries you can check/hydrometer to do so ought to range around 1.260 to as much as 1.300 (new usually only) at full charge and charging required at below 1.180 (measure each cell - look for major differences etc....example if 5 are 1.290 and one is 1.150 and the 5 are gassing, then you likely have a shorted cell.....if all show good spg but you can't draw much current, you likely have an open connector (charges the cell through the lead mush surrounding the break). If you have low or medium spg and can't seem to charge or draw much current, likely you have sulphated cells (might be overcome if you CAREFULLY charge at high voltage and monitor return to normal...CAREFUL!).

As for putting a $$$$ Astron across the battery, it will work but is overkill not noticed.....remember your battery will be the best filtering you'll ever see so basically all you need is a source of rectified voltage to charge it.....If you charge at a lesser rate (5 amperes is a good max rate..less is ok) you'll never notice the "hum".

73 - got to "Dagwood" out the door to work now

I have purchased a Pro-94 a couple of days ago. I think its a decent radio for the price.

However, after using it for the past couple of days, it seems to me that the Audio Electronics of this radio isn't that good, but rather poor compared to other scanners I have. And the data skip feature doesn't seem to work very well.

I think the best thing about this scanner is its ability to track different types of Motorola Systems as well as EDACS, provided they are running in analog mode.

I hope this info is of some help in your decision.

I had the 92.... GREAT conventional radio, SORRY trunk tracker, so I returned it and picked up the 94. The 94 was *nice*, but I found it was not quite as sensitive as my old 235. It also seem to have major problems rejecting intermod, so back it went. I then got the 245 and WinScan with the extra money from the original 92. I'm happy now; great sensitivity, great intermod rejection, and computer control capability. Its only down side is the 300 channels compared to the 1000 channel (actually 2 *independent* banks of 500) 94; BUT, with the computer control, different channel configurations can be exchanged in *seconds*. Just my experience.

>Is NASA TV Link (GE2 x5) Encrypted?

No, it is digital multiplexed, MPEG encoded, three channels. Any
NBC station should have the equipment to tune it. It is the same
stuff we use to multiplex news feeds on GE1 T19. You ABC guys
might not have it yet.

>I'm trying to find anyone who's tried to monitor the NASA TV link from White
>Sands to JSC (Houston) during shuttle missions, when shuttle video is relayed
>over GE2 transponder 5. At JSC it is processed and released over transponder 7
>as 'NASA TV'. Is transponder 5 encrypted, and if so, when, and what kind of
>encryption?

Mission video is on GE2 T9. It is ordinary C band analog sent in the clear.

Hi, why dont you look into the Yaesu FT-10, the 2 meter only version of the ft-50. I think its the closest you will come to a King-type amateur radio. I know it will work from 2 meters up to 174 mhz with no problem. You can also make your own custom size groups(banks) of channels. Try using the Home/Call Channel as your priority. Dry cell pack available, charger stand available-not specifically for mobile use but could be bolted in place and used with a dc cord, scan is fast for a ham radio, oddball splits no problem, good audio, give it up on the assigning numbers to tones, just carry a card with the conversions, or memorize them like I did. Dont think you'll find anything out there that will do everything a king can, I havent, but this is prob the closest you'll come for vhf only. Personally I love my VX-5, havent had any problems or heard of any from my friends who own them also. My best recommendation would still be a King Radio, you can find them used for less than $700, it will work great and be legal too.
Good Luck,
Mike

6551. How does the Heil Proset work on the Yaesu 920?

I was wondering if anyone out there has installed the Larsen on Glass
antenna on a Ford Explorer
1999 . It says on the paperwork and i quote
(Do Not install on glass with metallic content
passivated glass, solar-coat , solar-cool)

I bought the on glass dual bander but want to make sure . I can still bring
it back.

TNX for any help

Tracy, set up your crossband freq.'s and tones and power level then
with the radio on, push the Main Edit button on the left and right at
the same time then very quickly push the CHG/L button on the bottom
left.
You will see a Key blinking on the display.
I will send you a good site to go to with lots of info on it.
It will also mod to 999.995 Meg .
K5JOE
73 and Happy New Year.
I have 2 ot the 2800 Icoms and think they are the best thing since
sliced bread. :-)

>because your little power supply is mostly likely "voltage regulated"
>and as you wondered, the junction voltage drop will not allow the
>battery to see the a charge that will maximize your use of that battery
>(2.35-2.5 volts/cell just taken off the charger = 14 to 15 volts).

A small voltage regulated supply like that is likely to use one of the
common three terminal regulators. If the regulator sees a higher
voltage on its output pin than on its input pin for even a second, it
is toast. So unless you can be 100% certain sure that mains power
won't fail, or just take a good blink, while the supply is connected to
the battery, you need that diode to protect the regulator in the supply.

Now you can make up that diode drop by going inside the supply
and adding another diode, between the regulator common pin and
ground. In fact you may want to add 2 or 3 diodes in series here
to get the voltage up to the 14.5 volts the battery really wants to
see to achieve a full charge.

These 3 terminal regulators have built in foldback current limiting,
so there's no reason for concern in that regard. You can hook them
up to a dead battery and they'll be fine. Heck, you can just short
the output and they'll be fine. They are both over current and over
temperature protected. They just foldback into a safe operating
area until the short is cleared. The only way you can hurt them is to
have a higher voltage on the output pin than on the input pin, so that
protection diode is a must.

Other types of regulator circuit aren't always as persnickety about
having reverse current flow through the regulator. But many are.
For example, the 6 amp Radio Shack supply uses a 723 regulator
and a pass transistor. If mains power fails while it is hooked to a
battery, the 723 is toast. Astron uses basically the same circuit
in their big supplies, and the 723 will go bye bye in them too under
the same circumstances. A big dumb zener regulated supply
usually doesn't care unless the base emitter voltage of the pass
transistor is exceeded, but that sort of supply has no foldback
current limiting, so you have to be careful you don't overload it

with a nearly discharged battery.

From: "Rich Carlson, N9JIG" <n9jig@theramp.net>
Message-ID: <n9jig-C682A9.10542229121999@news.theramp.net>
Source record: 90765
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.equipment

From what I have read the Pro-94 was a bunch of great features built on a radio that just did not work very well for trunking.

The 245 was the first of the second generation of TrunkTrackers to appear (as was the 235 was the first of the first generation) and set the standards. While it has some blemishes, it came out of the gate fast and most people really liked it.

When the 92 came out it appeared that the trunking mode was some sort of afterthought and it just didn't work as well.

The 94 seems to be a Radio Shack "Pro-2026" style clone ("Take the good Uniden features out, insert the bad Radio Shack features" as I wrote in a review of the 2026 a few years ago).

Radio Shack seemed to really set the standards for scanners when they came up with a bunch of good GRE radios including the 2004/5/6 and the Pro43, but the Uniden clones are a more expensive lobotimized version usually. The Pro90 is the exception, it was the same radio with only a single battery pack.

I have a 245, and I love it. I have also used a couple computer driven solutions to EDACS and Moto trunking. I played briefly with a 94 and a 92. If the 92's trunling was as nicely implemented as the 245's I may have bought one. But I need accurate talkgroup ID's.

6561. Looking for HT purchase advice

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-29 00:00:00 UTC
From: hopfen@my-deja.com
Message-ID: <84dq2s$92v$1@nnrp1.deja.com>
Source record: 90769

I'm looking to buy a pair of HTs, mainly for communicating with my wife
while we're on vacation (we're both licensed).
My requirements are:
1. small and light (really, this is most important)
2. good power (for simplex use over a few miles)

Obviously, we sometimes need to use a local repeater if we're too far
away from each other for simplex, so I guess CTCSS would also be a
requirement?

Beyond that, I'm open to single or dual band, any brand, etc.
Any advice or recommendations would be most welcome!
Many thanks.

Sent via Deja.com http://www.deja.com/

>

The Current Uniden BC-245XLT's have a BAD firmware "bug" in them.
This is not really a "bug", but word has it that Uniden included
the wrong version of F/W in the first production run and the
bug was "fixed" before production started, but by some mixup
the older (with bug) F/W get sent to mass production.

When scanning both Trunked [MOTO] and conventional system systems
or multiple trunk systems, there is a 5 second delay at least,
maybe more... The current trunk must go complete IDLE for 5 seconds,
and the 245 will take one swing through all the other conventional
freqs (or goto another trunk). WHen on a trunk again, it must
stay for 5 sec of IDLE time before it even looks for conventional
for the 2nd time, etc..

If you have pretty busy trunk system, your BC-245 is pretty much
a BC-235, since 99% of the non-trunk traffic will be skipped.
Rumor has it, that Uniden will make some sort of announcement of
this "trunk delay" bug in Feb '00.

Heathkit actually put out two weather stations. One
was with 4 analog gauges that could be mounted either
horizontally or vertically and the other was a more
advanced digital display unit. The analog version sold
new for about $190. as I remember it (I have one of them).
The bearings in the anomometer were made out of teflon in
later versions of it. Where to get those, is probably an
exercise in itself. You can use the above new cost to
come up with a what it's worth to you cost. I don't
remember the cost of the digital version but I think it
was a least double. Oh, another thing to look at are the
sealed switches used for both the wind speed and direction
indicators. They tend to fail over time. You can find
replacements from a catalog from All Electronics Corportation
P.O. Box 567, Van Nuys, CA 91408-0567.

What level is the PTT line before it goes low??? If it is 2-3v the uPc
thinks it is keyed up when the radio is turned on and will not key it up
again..

Source record: 90787

Hi all,

I have this fine receiver here - since the TX absolutely refuses to engage. PTT, VOX, send/rx switch, nada. Have set the TX disable menu setting either way, refuses to key up.

The PTT logic is about as twisted as I've ever seen. The rig may have been exposed to a nearby lightning strike, but oddly, the RX performs well. Just no TX. The rig does NOT have the built in tuner installed.

There is Vcc to the PA, and the PTT lines go low when keying is *supposed* to happen - to no avail.

Anyone out there seen this before - or have an idea?

Thanks in advance
Mike N5MJ

Works great. No mods neccessary.

However some radios have HOT audio and will over-deviate when transmitting. My FT530 was like this. You may have to hold the mike away from your mouth a little to please the picky masses on the repeater. I modified my RS mike in some way which I cant remember to fix this...I like to eat the mike (kind of like a Tom Jones act..who remembers that?)

6587. Re: Question: Charging a deep cycle battery?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-29 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <38682DE6.6FC6@nbnet.nb.ca>
Source record: 90839

Howdy Joe.....I seem to hear folks voicing the same concerns as your ownself, so will offer up what I've learned, in answer to your questions.
There are mainly 2 concerns to the whole "how-to-charge" dilema with regards to the type of situation you have.....One of them is reverse polarity protection.....not really a problem unless you aren't too careful as a general rule. My recommendation is to not use a diode only because your little power supply is mostly likely "voltage regulated" and as you wondered, the junction voltage drop will not allow the battery to see the a charge that will maximize your use of that battery (2.35-2.5 volts/cell just taken off the charger = 14 to 15 volts). Now for the second (likely most significant) problem which is the DIFFERENCE in voltage between your low charge deep cycle battery and the regulated voltage of that little power supply (which as you indicated is only rated at 3amps). Because the internal resistance of that battery is very low, every volt that the battery voltage is LESS than your power supply causes the charging CURRENT to be substantially higher INITIALLY UNTIL THE BATTERY VOLTAGE COMES UP NEARER TO YOUR POWER SUPPLY's voltage. This is the problem with constant voltage charging - HIGH INITIAL CURRENT....tapering off to near zero (depends on the voltage of the source). The most likely thing that can happen to you is that, should you connect your little power supply across a substantially discharged large battery, that initially you will greatly exceed the current handling capability of that little power supply. So...what to do....You could charge this battery with an automotive (or other rated) charger initially until near or at full charge then "FLOAT" or connect your little power supply across it, to maintain that charge. You could connect an inline fuse or circuit breaker in that connection, rated at or less than your little power supply's capability, for its protection.

Your concern about exceeding the current capability of the little power supply when drawing a large current from the battery has merit but MAY not be as significant as you think......Once again we have to look at this battery being in a fully (or good) charged condition whereupon its internal resistance is very low.....what this translates to is that a current drain of 20 amperes should hardly show any appreciable voltage drop across the battery terminals.....hardly any voltage drop = hardly any increase in current drain from your little power supply "floating" across it. For relatively short duty cycles of 20 amperes transmit, and say 500ma receive (I don't know what you're running there heheh), the little power supply will take care of this slight drain from the battery.
The bigger the battery (ampere hour capacity) in this case, assuming full to near charged, the less effect you'll see. Keep in mind however

the initial concern over charging SHOULD the battery become low....The bigger the battery, in this case - the longer it will take to charge (higher initial current).

Clear as mud? The whole point to this being - can it be useful - YES......Does it require some operator intelligence - YES.......Is it failsafe - NOPE. With a little care on your part, not to exceed the rating of your little power supply, you can use it to keep your deep cycle (or other large) battery "up".

Now....having said all this (will he stop?) I can tell you that, even with your little power supply, you can charge up that big battery even if its discharged - All is needed is a variable series resistance (rheostat connection), Ammeter for monitoring, voltmeter for monitoring and some care on your part to adjust the rheostat so that initially the charging current is acceptable (if 3 amps is max for your ps, I'd suggest no more than 1.5 amps) AND as the voltage increases you'll see the current drop off, just adjust the rheostat to bring the current up etc etc.....this doesn't have to be a "sit on top of it" project....just periodically check and readjust the charging current.......When you've taken all the series resistance out, you're back to the "float charge" scenario.

Because you've asked about this, I've made some assumptions about your understanding of this (and apologize if I'm wrong!). The problem with using the big automotive "boost type" of chargers is that initially they can both heat the plates, warping them (may short or break connectors) and may unnecessarily "gas" or release hydrogen (assuming lead acid types) more than normally which may be both hazardous (expolsion hazard) or at the least cause a loss of water (when combined with oxygen in the air). The use of the big automotive charger then is to boost for a short time, and/or start a vehicle....the lesser of 2 evils.....of course long term charging is also available but you should be wary of the available terminal voltage of automotive type chargers which can be QUITE high....long term low rate charging can boil or gas the battery just like the high current boost selections.

A pretty good way, I've found, over the years is to combine a constant current charging circuit with a trip to constant voltage at some predetermined point......maybe a subject for another time eh!

73 - Keep on tinkering.......THAT.....is REAL HAM RADIO

This (somewhat well known) Amateur says it's good the FCC is
finally going to retire CW as it should have YEARS ago.
What should happen now is all question pools should be changed
and non-published - PERIOD. I'm ALL FOR the elimination of
ALL CODE REQUIRMENTS for a ham licence ***ONLY*** if the question
pools are then changed and non-published.

True! FCC and ARRL should have dropped CODE *YEARS* ago.
Keeping code is what KILLED ham radio.

> I blame the ARRL,NCI,FCC,CB,Catman,and all the hams that are too
>lazy,too stupid,or think the average person is too lazy or stupid.

Why?? because they feel it USELESS to learn an OUTMODED MODE of
communication called Code..? I know EE's with Masters and 2 PHD's
who could padd an Extra exam with no technical study and a light
review of the rules & regs. Know why they do not have a ham ticket?
Because ARRL wanted to keep the freakin code for soooo long. Now we
have
Internet and all in all, the ARRL is probably 5 dollars short and 2
weeks
late - as usual. I APPLAUD the FCC anouncement, but I am afraid
it's too little too late in the long run. Kids want Internet, not a
radio
to string up unsightly antennad and talk wioth old gassbags on HF.

There are a lot of extra callsigns to go at least in the 2x2 format and
we still can do in the somewhat useless area codes or add another digit
to them and since the extra and tech are only a few simple questions and
5 wpm apart..so what??

BTW..the FCC seldom comes up with ANYTHING on their own..they respond to
requests from people. I have submitted several requests for changes to
the rules and have received considerable consideration and response from
the FCC. This restructuring was a direct result of the ARRL submission
and the numerous comments surrounding the proposed action. The FCC
didn't just think it up. So if you want something changed, don't tell
me, tell them. There is an established procedure for submittal, but it
is easily accomplished.

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $350.00 includes extra charger & shipping Unit Retails for $379.99

I just purchased a vehile which has a Larsen NMO 150 Antenna. It used to have a radio that was used to communicate with the RailRoad trains.

I plan to put a CB inside the vehicle but don't know if I need to tear out the antenna and put in another one, or if there is some way the one already on the vehile will work?

Any assistance would be most appreciated.

Earlier I posted a request for 706 schematic info and the response was appreciated.

Now I am askinfg for info regarding the 4 pin Molex connector used to connect to the AH-3 tuner. I understand that pushing the Tune button causes the AH-3 tuner to "tune" via the 4 pin connector.

What I need to know is what is on these pins (I know there is 13 volts and Gnd on 2 pins)??

Thanks in advance...please respond directly to my E-Mail address.

I have a 9 foot whip that has worked like a charm on 10 meters on a
variety of rigs. They're available at Rat Shack for $15.

Bob,

Years ago I owned a IC 255A with a similiar pin arrangement. I found that a 1 Kohm resistor made the radio count up and like you've already found grounding the pin made it count down.

6614. DC plug for kenwood TH-215 and TH-225

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: sjcduke@aol.com
Message-ID: <19991230143236.03675.00000030@ng-fh1.aol.com>
Source record: 90652

I have both of the above 2 meter HT's. I want to use an external source of DC. Kenwood wants $9-$10 for the little DC plug that is necessary. I need several of these plugs, and I am unwilling to spend so much money for something that should be more reasonably priced.

The outside diameter of the plug is 5.5 MM, and the inside diameter is 1.55 MM.

Is there a source for these plugs at a more normal price?

Anyone help me....or have any ideas?

Thank you.....Lee KA0FPJ

Hi,
I need a few GE UHF Mastr2 UHF radio's. Painted handle format only.
Must be working perfectly. Cosmetic condition unimportant. Prefer
complete radio's with mic/control head/power harness, but let's
talk.

Have cash or can do some horse trading. See my swap page at
http://www.PapaDads.com

Thanks,
Joe K7JOE

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

Message-ID: <386BCD19.AE035CAF@niehs.nih.gov>
Source record: 90656

I have a Kenwood TH78A that has a problem with the display. Most of the vertical lines on the LCD display do not work, while the horizontal ones do, making it hard to read the frequency and alphanumeric displays. The unit has been serviced twice by Kenwood, and the problem has returned again. Each time, on the service report it simply says adjusted LCD display, with no new parts listed. Has anyone else encountered this problem? Any suggestions on how to fix it myself so I don't have to keep sending it in again (and keep forking over the $50.00 per hour service charge)?

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Dear subscriber: There is no edition of The ARRL Letter this week, so we're forwarding the following important news on Amateur Radio license restructuring as a Special Bulletin. Best wishes for a happy new year 2000!--Rick Lindquist, N1RL

~~~~~~~~~~

Amateur Restructuring is Here: Three License Classes, One Code Speed

NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new millennium. The FCC today issued its long-awaited Report and Order in the 1998 Biennial Regulatory Review of Part 97--more commonly known as "license restructuring." The bottom line is that starting April 15, 2000, there will be three license classes--Technician, General, and Amateur Extra--and a single Morse code requirement--5 WPM.

"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Besides drastically streamlining the Amateur Radio licensing process, the FCC said its actions would "eliminate unnecessary requirements that may discourage or limit individuals from becoming trained operators, technicians, and electronic experts."

Although no new Novice and Advanced licenses will be issued after the effective date of the Report and Order, the FCC does not plan to automatically upgrade any existing license privileges. The ARRL had proposed a one-time across-the-board upgrading of current Novice and Tech Plus licensees to General class, but the FCC declined to adopt the idea. This means that current licensees will retain their current operating privileges, including access to various modes and subbands, and will be able to renew their licenses indefinitely.

Starting April 15, 2000, individuals who qualified for the Technician class license prior to March 21, 1987, will be able to upgrade to General class by providing documentary proof to a Volunteer Examiner Coordinator, paying an application fee, and completing FCC Form 605.

The FCC's decision not to automatically upgrade Novice and Tech Plus licensees means the current Novice/Tech Plus HF subbands will remain and not be "refarmed" to higher class licensees as the ARRL had proposed. The FCC said it did not refarm these subbands because there was "no consensus" within the amateur community as to what to do with them.

As it had proposed earlier, the FCC decided to lump Technician and Tech Plus licensees into a single licensee database, all designated as "Technician"
~~~~~~~~~~

licensees. Those who can document having passed the 5 WPM Morse code examination will continue to have the current Tech Plus HF privileges. "If documentation is needed to verify whether a licensee has passed a telegraphy examination, we may request the documentation from that licensee or the VECs," the FCC said.

In addition to reducing the number of license classes from six to three and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the number of written examination elements from five to three, authorize Advanced Class hams to prepare and administer General class examinations, and eliminate Radio Amateur Civil Emergency Service (RACES) station licenses. RACES will remain, however. "After review of the record, we conclude that we should eliminate RACES station licenses because RACES station licenses are unnecessary for amateur stations and amateur service licenses to provide emergency communications," the FCC said.

Under the new licensing scheme, there will be four examination elements. Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-question written test to obtain a Technician license; Element 3 will be a 35-question written test to obtain a General license, and Element 4 will be a 50-question written test for the Amateur Extra license. The FCC has left it in the hands of the National Conference of VECs Question Pool Committee to determine the specific mix and makeup of written examination questions. Current Amateur Radio study materials remain valid at least until the new rules become effective in April.

The FCC's new licensing plan means someone will be able to become a ham by passing a single 35-question written examination. The plan also simplifies and shortens the upgrade path from the ground floor through Amateur Extra--especially since amateurs will only have to pass one Morse code test.

Elimination of the 13 and 20 WPM Morse requirements also means an end to physician certification waivers for applicants claiming an inability to pass the Morse code examination due to physical handicap.

The effective date provides a window of upgrade opportunity for current Advanced licensees. Between now and April 15, current Advanced holders may take the existing Element 4B, a 40-question test, giving them credit for having passed the current Extra written examination. Likewise, holders of a Certificate of Successful Completion of Examination (CSCE) for Elements 3B or 4B dated on or after April 17, 1999, will be able to qualify for General or Amateur Extra respectively when the new rules go into effect on April 15, 2000.

The FCC disagreed with the League's suggestion that it undertake a restructuring of operating privileges along with licensing restructuring. "We believe that in light of ongoing discussions concerning implementation of new and more modern communications technologies within the amateur service community, we should accord the amateur service community an opportunity to complete such discussions and possibly reach a consensus regarding implementation of new technologies before we undertake a comprehensive restructuring of the amateur service operating privileges and

frequencies," the FCC said in its Report and Order.

In its amendments to Part 97, the FCC's Report and Order refers to a "Club Station Call Sign Administrator," something that does not exist under the current rules and which was not explained in the R&O itself. An FCC spokesperson said the Commission plans to issue a Public Notice soon to explain the program and to solicit qualified entities to serve as call sign administrators for club station applications.

A copy of the entire Report and Order (FCC 99-412) is available at http://www.arrl.org/announce/regulatory/wt98-143ro.pdf or at http://www.fcc.gov/Daily_Releases/Daily_Business/1999/db991230/fcc99412.txt .

6623. FT847 Control software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: Bob Freeth <bob.freeth@dial.pipex.com>
Message-ID: <84goqf$7pr$2@lure.pipex.net>
Source record: 90661

If you have an FT847 (or other Yaesu CAT control transceiver) and want to have a play with driving it with your computer you are welcome to a bit of code I have just uploaded to my web at http://www.bob.freeth.dial.pipex.com/polarplot

At present it shows in LARGE fonts the frequency, operating mode and an S-Meter. You need to connect the transceiver to the computer with a 'null modem' cable - quite easy to make up if you have the right connectors.

I have written it for a friend who has poor eyesight and it will be 'improved' over time. I will be adding frequency control and lots of memories when time perrmits.

Bob Freeth (G4HFQ)

6624. Amateur Restructuring Announcement - FCC screws Ham Radio!

6625. Yaesu FT-2600 - high pitch whine from speaker?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: gkd@reno.WPI.EDU
Message-ID: <84gqpf$sv9$1@bigboote.WPI.EDU>
Source record: 90663

I have a Yaesu FT-2600 2m rig that produces a faint, high pitch (maybe 8 KHz or so) whine from the speaker (internal or external) whenever the radio is turned on. It is present while transmitting as well as receiving, and the volume control setting has no effect on it. The whine can be heard when using the rig indoors in a very quiet room, or by putting one's ear directly in front of the speaker.

Have any other FT-2600 owners noticed this? I'd like to know whether it is a defect in my rig, or just normal behavior for this model,

Greg

Hey, less people knowing CW means less QRM and more DX for those who like CW.

Go ahead and hack it out in kilowatt alley ... we'll be down on CW working the world in case you need us !

OK, I'll probably get flamed for this, but as a Technician who has
been struggling to get to 5WPM, I think this is a good compromise. I
feel I actually have a shot now at upgrading, and yet it kept some
code requierment.

73, and Happy New Year!

Problem 1 check to see that the leads to the internal speaker are still connected,
Do you have a plug inserted on the rear panel in the external spkr jack?

Problem # 2 . Are your slope tuning controls in the correct position. When I purchased my 850, I was in such a hurry to check it out, I looked at the diagram in the manual , instead of carefully reading how the knobs should be set. The diagram indicates the knobs in the reverse position. Listen to the SW Broadcasters to check out your rig with a poor antenna, just a single wire, stuffed into the center of the coax connector will be sufficient. The receiver in the 850 is one of best.

I agree, the letters should be ARKL for the American Radio Kickback League.
They sold us out by giving away the 220 band to UPS, and I'm sure some people
in Newington lined their pockets after that one, now this. More back room
deals and payoffs!

I for one will NEVER patronize the ARRL a.k.a. ARKL! Boycott NOW!

What isn't so GREAT, Bill, is your Usenet etiquette (sp?). By adding only one line of new content to a 100-or-so-line quote, you're not only wasting bandwidth and disk space on the new servers that carry these groups, you're also wasting peoples time while they wait for the entire thing to download.

Please learn to trim your quotes.

Thanks.

Why blame the ARRL? I'm not a member, but it seems to me that the FCC took the restructuring one step further than the ARRL wanted.
Didn't the ARRL want 12WPM for Advanced and Extra and 5WPM for General??
How about four classes instead of three?

A lot of you ol'timers out there think that CW=CB with respect to this new license structure. IMHO, you're wrong! HF has a serious learning curve when it comes to long wires, tuners, grounding, etc... It's not like you plug in the mag mount to the HT and start yacking!

I worked really hard to pass the 5WPM code last month and I have been working a little 10M here and there. After stringing the longwire, tuning the MFJ941, the DSP-9+ and figuring out the Icom 706, HF is a lot of hard work! It's so rewarding to make a distant contact after all that...Don't forget the price of HF gear. You can buy several HTs for what a run-of-the-mill HF radio costs. You really have to want to get on HF. With the learning curve and the cost, I don't think it's going to be as bad as some of you think.

Oh well, bring on the Extra!

73 and Happy New Year!

Dan / N7WPD

Looks like whineing,crying and slothfullness do pay off,I was wrong
when I made statements about amateur radio not dying,it surely will now.
I blame the ARRL,NCI,FCC,CB,Catman,and all the hams that are too
lazy,too stupid,or think the average person is too lazy or stupid.

1. How can you blame the ARRL when the FCC went way beyond the ARRL
position?

2. So now we have it. This means that folks who give a damn about this
hobby will do whatever we can to ensure that the written test is meaningful
and is administered honestly.

3. This also means that those of us who use CW are free to use CW just as
before and those who don't will be required to pass a very minimal CW exam
to get in the door.

I think it's a good structure. Perfect? No, but would someone please
describe a perfect structure?

So kiwtchurbitchin and make it work.

Of course, there are those who would rather sit at a computer keyboard and
piss and moan rather than get on the air and enjoy the hobby. I'm off for
40 CW.

Hf is a piece of cake if you do a little research,a resonant antenna
or an autotuner would help,the Icom 706 is a good rig but menu driven
radios do have a learning curve that other rigs just as good and better
don't have,and they call this a MOBILE rig? I want something I never
have to look at and can operate by feel,thats what I use to operate HF
mobile 5 hours a day 6 days a week.Your 706 was expensive but the Alinco
DX70 is only slightly different and in some ways better for as little as
$599.

From: WebMonkey <webmonkey@mad.scientist.com>
Message-ID: <386C114F.1D5E@mad.scientist.com>
Source record: 90686

i have a friend that does the dual inband receive alot and since i own a repeater, this question came up.

say you have 2 vhf freqs on your ic-2710h display.
147.345 and 146.655

if you key up the first repeater [147.945] wouldn't the other freq stop listening so it doesn't get fried?

my friend says no. but since i can't afford duplexers for my 2 antenna system repeater, i say yes, the second freq goes deaf till you stop transmitting on the same band.

what's the skinny on this.

thanks for your time

The requirement for 5 wpm is only for the general class license and above.
you can still get
you Ham license by passing the written portion only. You license will the
Technician class.
then when you take the 5 wpm and the new part 3 exam then you will get your
general license.

So what is the problem. Those who never cared about cw can still go on and
careless about it. and those who do
can still have the privilege.

Thank god for the internet otherwise all of this language and strong words
would be lost. it is apparent that
some of the members commenting and are not true hams in nature.

all those who do not care for words. good keep you foul language and
attitude to your self.

Hey, there's RTTY on HF so I think *all* hams should have to pass a
60 wpm typing test to get on HF.

What we really need is a written test that includes:
1) FCC rules and regs.
2) Accepted operating proceedures and practices.
3) General electronic theory including how and why *not* to overdrive
a transmitter.

Hi Clif

Thanks for the reply - the SS line (CN7, pin 10 and other SS points) sits around 1.7 VDC in receive mode. I was expecting a TTL high... evidently it's being loaded down? I'm working off the schematic, so haven't a real solid idea what the lines should be reading in either state, other than keydown should be low, keyup should be high.

Cheers,
Mike N5MJ

It is not diffucult to polish the metalic coating off of the glass. If you do a nice jod of it your spot will be slightly larger than the antenna base. The little bit of clear glass around the edges can be matched up with a black permant marker. I have done this for 6 years in two cars with no trouble.

73 and Good Luck,
Joe

Looking for the layout and or schematic for the Clegg 10 amp power supply model 031A.....This is the matching power supply for the Clegg FM-DX.....Will pay the copying and shipping cost.....Please e-mail me if you can be of any help.....73's Happy New Year.....WZ1U Steve

6658. Looking for digital clock

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: louw@prefer.net
Message-ID: <386ac25a.50284945@nntp.we.mediaone.net>
Source record: 90704

Does anyone know where I can get a digital clock with 6 digits and capable of displaying 24 hour time? My ancient Heathkit digital clock fell I don't think I can get it working again.

I prefer LED or something similar. LCD clocks placed where this was don't get the right light to show up. Electric or battery would be fine.

Thanks

Happy New Year!
Happy New Decade!
Happy New Century!
Happy New Millennium!

Lou

Yaesu FT101B with AM filter , Cosmetic condition a 7, working condition is excellent.
Stock Mic, Manual, $300.00 SOLD

Tram D201 in good condition, manual $275

Johnson Messenger 250 Base, Astatic Golden Eagle D104 Mic like new condition in origianl box, $300.00

PDX400 eight tube 10 meter base amp, Brown with gold knobs and Browning Eagle on the front, looks very nice with a Browning. 700-1000 watts PeP, in good working order. $280.00

Sears RoadTalker 40 SSB/AM Base/Mobile Good working and cosmetic condition, stock mic. $75.00

Cobra CAM 88 Tube 23 channel base Working with a copy of the SAMS, no Mic but I have the hard to find mic connector. $70.00

Siltronics Model 90 -6 VFO, Good cosmetic and working condition $70.00

BBE 411 Rack mount Sonic Maximizer, Rack mount, 1/4" in and out, will work for voise or musical instruments $90.00

HoneBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $35.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Ranger 2970 100 Watt 10/11 meter mobile transceiver, Very good condition. My only complaint is the LCD display washes out easily when viewed from an angle.$275.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Browning MK III receivers and transmitters Abandoned project Sell the whole lot for $375.00 Email for details

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

National NC-183 Shortwave Tube receiver, Good condition with manual $170.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM $50.00

Azden PCS2800 10 meter FM mobile transceiver and a Azden PCS3000 Mobile 2 meter transceiver, Both need repair, with manuals $60.00 for the pair (Don't have time to get to these and fix them)

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO
Please Email for more info
Mike

This is a 16 channel, 4 watt, scanning handie-talkie that will cover 438-470 MHz. It will do either PL, DPL or carrier squelch on any channel.

Includes heavy-duty spring belt-clip, rapid-rate battery charger

This radio is in very good/clean condition and was used in an office enviroment

I can have your frequencies programmed into this radio prior to shipping.

$ 255.00 shipped

Please reply via e-mail and mention this posting.

Hello ?

I recently acquired an IC-2KL solid state amplifier with auto tuner.
However, it would not transmit on 12 or 10 m band nor does it have
position in band switch for those bands.
How do I modify the amplifer for transmit on 12 adn 10m bands ?

Thanks.

Regards,

Hello Folks,

Looking for input, good or bad, about the VX-5R. I have owned a FT-50R, but sold it off. Now I am looking for a HT again and am wondering if the VX-5R is all that it is cracked up to be. I know the FT-50R is a sure winner in my book...I wonder if the extra cash is worth this little radio(VX-5R).

What I think I will like about the VX-5R over the FT-50R:

1. Smaller Size.
2. Lithium Ion battery with shorter charge time and no memory effect (big plus)
3. Larger Display
4. Backlit Key Pad (another big plus)

I have read all the links about the VX-5R...so please I don't need and links.... just your opinion if you have one or both of thses radios...

Happy New Year!

If you really want to be safe be sure it is not an old PCB filled cap.

I see them for sale at hamfests all the time and I admonish the seller. They think I am nuts but PCBs themselves are not particularly good for you but it does take long term exposure to be terragenic to humans. PCBs when burnt produce dioxin (agent orange) the second most deadly substance known to man. Number 1 is plutonium, so you see it is in great company.

If an oil cap is not marked non-PCB you should dispose of it through an approved PCB handling facility.

Hi Jason,
I have a FT-990 and it is rated at 100W and the meter also displays up to 150W.

On some bands the rig will output 105-110 watts so the meter needs to display more than 100 watts.
The meter readings are not linear. At 25% of full scale it reads 10W, at 60% it reads 50W, and at 80% it reads 100W. Meter readings have a tendency to be more accurate towards the middle and less accurate at full scale. To me, given that the meter readings are logarithmic it seems to make a lot of sense for a full scale reading to be 150W.

I've have one a year or so. Nice radio,works well. The downside is
even though the software claims you can do multiple PL the radio will
not let you. Also if you plan to program the whole world in it (mine
has approx 20 zones/150 channels) be prepared to spend some quality,
time with your radio! Not hard but it does take a while. If you can
live without MPL I don't think for the size and price you can do
better.

Jason,

I have owned both an FT-10 and an FT-50. The only draw back to the VX-5R is front end overload. However, in my experience, it isn't any worse than my FT-50 was in the same area. The FT-10 was as quiet as a church mouse and it was my first radio. So when I got the FT-50, I was disturbed by all the noise when I'd drive through certain areas. I assumed I'd have the same to contend with when I bought the VX-5R. I did.

What I like most:

- I never knew how much I missed a backlit keypad. Outstanding feature in such a small radio.

- You can actually receive FM broadcast (unlike the FT-50, which was supposed to but didn't). I can't get over listening to my favorite FM radio stations and being able to actually hear the music.

- I don't have to miss Gary and Dave or Rush Limbaugh just because I am no longer in my truck. KNBR AM 640.

- No need to carry two radios if I think I might want to work the local 6m repeaters. I still need to remember to grab my 50MHz Larsen Whip to replace the dual band 144/440 Larsen Whip.

BTW, I have a thru-hole (not mag mount) NMO connector on the roof of my truck. Any one know of a good tri band 50/144/440 antenna? Seems like I looked for one some time ago but there wasn't one available with an NMO connector.

6681. Re: Question: Charging a deep cycle battery?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: &retired0 <&retired0@hotmail.com>
Message-ID: <386B5C39.10016CB9@hotmail.com>
Source record: 90727

A popular misconception is that a 13.8V power supply puts
out 13.8V.
That's merely the approximate voltage. Small differences
can make a
BIG difference in battery charging.

Another popular misconception is that a 3 amp power supply
can only
put out 3 amps. 3 amps is (often) the amount of current
that the supply
can source for long periods of time. The actual maximum
current and
the characteristics of the current vs voltage can vary VERY
WIDELY...
like as much as ten times (until it blows up).

Take an accurate voltmeter and see if the power supply is
putting out
13.8V under NO LOAD conditions. That is what it will be
when the battery
is fully charged.

I use 13.6V for float charge voltage. 13.8V may not be a
problem. You can
usually tweek something in the power supply voltage sense to
make it right.
Stable is another matter. Check it hot and cold. If the
battery is outside
in the winter, you'll have to correct for the tempco of the
battery. I don't
remember off-hand what it is.

Now, what about the current. Current limt methods vary
widely. The safest
thing is not to worry about it. Use an external current
limit.

Incandescent lamps make good battery chargers. The
resistance goes up as
the voltage increases, so while not independent, the current
is not very
dependent on voltage over a wide range.

Put a BIG MUTHA lamp, like a car headlight, between your
13.6V supply and
the battery. The current will be absolutely limited to the

lamp voltage
even if the battery shorts and the supply doesn't limit.
Yes, current will be
reduced when the battery is at 13V, but it's a safe system.
And the light
tells you when it's charging a lot.

Another interesting thing you can do is use a regular car
battery charger.
Those usually cut off at 14.4V or so. Way too much for
float, so put it on a
timer and hit it often enough to make up for the load and
self discharge.
A comptuter controlled X-10 system makes an excellent timer
for this purpose.

I built a mobile mount from pine and have used it in
two Ford F-250 trucks. It straddles the transmission hump
and requires no holes be drilled in the trunk.

It features a hinged shelf and two
circular holes which serve as drink holders.

For photo and plans, see
Monitoring Times magazine, Nov. 1996.

To obtain back issues of MT, see:

Personally, I vote for "SmartChargers" that do an initial at 14.4 (flooded) or 14.2 (gel) then back off to 13.8 (flooded) or 13.7 (gel). These chargers cost a bit but they work.

The problem with a P.S. is if you ALWAYS recharge a used battery to 13.8 (or 13.7), you will run into cell equalization problems (somebody correct me here). When your charger starts at 14+ then drops to the 13.8 float, equalization is not so much a problem. Plus, your battery gets a "full" charge.

Of course, you COULD manually use your P.S. to do this if you want to take the time. Don't forget and leave it at 14.4 though, you'll boil the battery if you forget about it.

The SS line should be abt 8v. With 1.7v the upc thinks it is already
keyed.

6692. Power supply question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-30 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <84g6cdor1@bgtnsc01.worldnet.att.net>
Source record: 90738

Anyone have any experience or read any good reviews on the Astron linear vs. Switching? I know switching supplies can be noisy but I've also heard that if they are build right they can be fine.

I'm interested in putting together a carry case for my FT-8100R and want to put a power supply in. I was going to use the SL-15 which is a slimline 12AMP supply. But then I was kinda staggered by the weight (13lbs). I then noticed that the switching ones are almost 10 lbs lighter - and their not even that expensive! So I'm wondering what's the catch? Are they too noisy to be acceptable?

I'm not planning on carrying this through the woods or anything - just on trips a sort of luggage to setup in a summer home or to just take out of the truck and use as a base station at home. So having extreme lightweight is not super crucial. But needless to say the 3.3lbs vs 10 lbs is very very tempting.

Any advice/experience is greatly appreciated.

Source record: 90398

These amps are not hard on 3-500Z tubes, if you run them properly. getting 1200watts output for them is possible, but greatly reduces the life of the tube.
Also, filament voltage is ti high on these amps, granted this gives higher output, but reduces the life of the tube greatly. An increase of .25v over 5v, will reduce the life of the tube by 30%. (this comes straight from EIMAC data)
A more "realistic" power output from the AL-80B, is a 500-700w "output". NOT, the 1200w input, that many, confuse with output.

Hi,
I have a DOSY A-SW-4 Coax switch and was wondering how many watts this model is rated for?

This is the switch with the following positions:

Vert.
Horz.
Aux.
Vert./Horz.

Any help would be appreciated!
Thanks
Gary

Ken,

Yes, this radio can be modified. Below are some links for you to check out.

I have a VX-5R. I love it!!! My other radios include a FT-50RD, an ICOM Z-1A, an Alinco DJ-S11T and DJ-C11T, an Icom T2A and a Rexon RL-112. The first three are dual-band radios. Of the first three, the VX-5R performs the best. The FT-50 has too much intermod and the Icom pulls too much current (i.e. eats up the batteries).

Some things I really like about the VX-5R are...
small and easy to carry
Li battery
Great receive & intermod rejection (compared to my other dual-band radios)

Using the EVE software (available on the internet) easy to program
Get's non-ham's attention and give me an in-road to urging them to get a license.

73,
Brent

Would you care for some cheese with that whine? Why is it that you
code bigots feel compelled to post your vitriol to all the newsgroups?
RRAP was established as a forum for the code testing descussion.

With these changes we may revitalize the hobby. Any SIG where I am the
"young guy" at most meetings is in deep trouble.

Look on the bright side some very interesting clever folks might show
up and if you give them a chance you might even like them.

What we need is 451 hams to each send Gary a buck, as long as he promises to take a hammer to these things before taking them to the dump.

We sure as hell don't want anyone turning them on and connecting them to an antenna.

Thirty+ years ago I was running high power AM on two meters. The owner of one of these Crunchboxes lived next to the local Air Force base. His *receiver* was re-transmitting *my* signal right on one of the control tower frequencies. Of course the tower ops identified *my* call and wanted me off the air.

Good post Dick,
As you can see by my other posts I agree entirely with you.
IMHO the FCC needs to be driven by a congressional committee that will
listen to all of the facts and not be swayed solely by the ARRL lobby.
This might happen in the future.

Hams need MORE modern comprehensive exams and MORE license classes,
73 es Happy Y2K,
Bob Wex w2ilp (Ignorant License Passers?)

Dogs "look good on paper"...better than on the
carpet! Cats know where their litter boxes
are.
--w2ilp--

The purpose of an examination is to examine.
The purpose of a test is to test. If everyone
can pass an examination or a test then there is
no purpose for the test or examination...and
thus we can all become Citizen's Multi-Band (CMB).
--w2ilp--

If they don't get rid of fixed Q & As, maybe ALL
hams will become EXTRAs on April 15, 2000 and
from then on they can just give a dumbed down
120 question multiple choice test for just
ONE CLASS of license. Is it possible that the
ARRL thinks that anyone who could pass a harder
test would buy a new PC instead of ham radio equipment?
Nah...I dunno if they realize that because they
can't afford to hire a good product line manager.
--w2ilp--

There may be a new type of physician's certification
required for all Hams who can't make "Extra class"
by the end of 2000, so that it can be determined
if they are safe to park their bicycles or spin
the propellers on their hats in public places.
--w2ilp--

Source record: 90409

Just bought a second TH-G71 for my brother and after a week it started showing some problems...

Whenever a battery is on the back of the unit no keys function except POWER and TUNING. All other keys are DEAD... cannot access Function menu to change any settings etc (key lock is OFF).

Once power is connected to an external power source everything works! the moment I unplug it and connect a batter nothing works! I tried swapping batteries from the other radio and same thing happens...

This is quite strange, I've never experienced such a problem with my other G71...

any ideas what might be the problem?

By the way, FM deviation is only 2.5 khz instead of 5 khz max on FRS. You FM radio will be very strong audiowise talking to a FRS radio, and you will have to turn up the volume very louad to hear a FES radio.

The Yaesu can adjust the deviation to 2.55khz on the keypad though.

Good luck.... Kurt

Everyone doesn't. I would never think of modifying a radio to transmit out of band because I have no right to transmit elsewhere and I wouldn't want someone else getting a hold of my equipment and causing harmful interference on air-traffic or emergency services frequencies.

Other people who have the right and foresee a the need to transmit elsewhere and have modified their ham equipment accordingly. I am not sure, but I think they are still guilty of using equipment that was not approved for that purpose. That doesn't concern me near as much as the thought of someone causing harmful interference on critical channels.

I had one ham tell me that if he used his oob radio to call for emergency help and saved a life, they would probably overlook the infraction. Perhaps they would. My dad once drove 5 miles into town while my mother frantically tried to revive my little sister who was suffocating. Almost the entire way he had a police man chasing him. He was guilty of failure to stop and eluding a police officer at high speeds -- I am sure that was as fast as his car would go (a felony I believe). He didn't get arrested or a ticket.

It is a fact and there are numerous examples. No ham radio
test ever was that difficult, in terms of comparing it with
engineering, but the question pool scheme has been too far
out of range.

> That has now been simplified to only needing to learn 5 wpm Morse.
> You can handle about that speed after simply memorizing the code.

I doubt that very many hams will pursue it further now that
it won't be required.

> I guess I will finally be getting my Extra Class

I sure would. in your circumstances. I'd imagine a couple
hundred thousand others will, too since most won't be
required to much of anything else. How do you sort them
today? You don't.

The
> 11 wpm plateau where I have been stuck for several years will no
> longer be a barrier.

Mostly those barriers are caused by a couple of things.
One, learning the code character formations at too slow a
speed and never finding a way to re-learn them at speeds
higher than the "plateau". When one learns with Farnsworth
speed character formation speeds, where the code is formed
at ~15 to 18 wpm. but sent at slow-spaced, slow word speeds
it helps eliminate that difficult "hump" transition. Most
people who stay stuck at a "plateau" fail to learn that.

The other factor is that one will never learn code at
higher speeds unless he "pushes" himself to try to copy
considerably faster than he is able to copy. When you listen
to faster code, copying first the simple short words that
you can pick out, you find with a little time that you're
copying more and more of it as practice goes on, and you

start to hear words instead of just characters. Then when
you listen to the slower speed practice, it seems astounding
how slow "ordinary" speeds are, and how much of it you copy.

So you have to really make yourself work to practice beyond
your capacity, and you find that your capacity moves on up
to levels you never expected.

> I just wish they had the old style questions - where real electronic
> knowledge was required.

Ain't gonna happen anytime soon, I'm afraid. FCC just
dumped the whole testing scheme on to the VEC system, and
W5YI is on record as intending to eliminate theory from
written tests. Since he has installed himself in the
3-member Question Pool committee which decides exactly what
will constitute *all* the tests, it seems like done deal.

My time as a VE ended permanently yesterday, unless
something pretty drastic changes that I can't forsee at this
time.

Sure it is, as INFORMATION PRESENTED, not the exact
questions and answers.
Nice try at distortion, but it didn't work. There's NO
correlation whatever. You have to read and understand the
material to come up with the answers.

So being that i now hold tech+ license all i will have to do is pass a written test & i get my general? Wow thats cool cuz i got my tech when i was 12 & a year later learned the code for just long enuf to pass the 5 wpm test. now i'm 20 & have totally forgotten the code. so to get my general all i gotta do is study & take the exam, am i right? ant to those who think the question pools are a bad idea, i can still answer most of the questions in my technician study book after 8 years. I didn't memorize it, i learned it. and i assume that's what's inevitable when studying for the exam if you have an interest in radio (if not, then why do you want a license?) allright.... 73

>imagine they'll probably discontinue after April 15 since no

Oh, that's the plan, but time to practice is the problem. People have asked me if my hearing is bad because I go around with an MFJ tutor in my shirt pocket and earphone in my ear.

I wonder if the ARRL bulletins will drop down to 5wpm, too or just go away. I find it strangely schizoid that ARRL "broadcasts" (hey, that's not legal anyway!) code practice 3 times a day and is against a 20wpm proficiency test..

I am continually amazed by the number of people that go out and spend $2, 3, or 4000 for a radio, and then the first thing they do is post a message to find out the latest mods to transmit out-of-band. Guess I'm missing something. Regards, Randy, N1ZUO.

>> knowledge was required.

>Amen to that!

Old style questions? Let's see what the 1912 written test consisted
of:

"The written examination consists of seven questions and to answer
these you should know:
1. How to make a diagram of the transmitting and receiving apparatus.
2. How the transmitting apparatus is made and how it works.
3. How the receiving apparatus is made and how it works.
4. The International regulations for wireless communications and
the U.S. wireless laws and regulations."

Taken from _The_Book_Of_Wireless_, Collins, 1915.

These were essay-type questions, and as the government examiners
were fond of saying, "What you fail to say, you don't know."

Really? AND just how long do you think it took to learn
YOUR feelings about code? You code haters just can't hold
your "victim" feelings back. You going underground or
something?

What
> will you do then?

You might be surprised to learn that I have a number of ham
acquaintences who are NCT's, -almost all of them who tested
with my VE team and who wouldn't have tested at all for some
time if I had not made it available. And we get on quite
well. They seem quite satisfied with their chosen spot in
the scheme. It's you whining magpies that are disgusting.

6744. License Predictions for 2002/2003

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: bobby4a7vv@aol.comdex
Message-ID: <19991231144735.26680.00000145@ng-fn1.aol.com>
Source record: 90440

Here's my predictions for what the new license structure will do over the next few years:
1) The main difference will only be the "migration" of existing licensees. The current Generals/Tech plus operators will migrate to extra.
2) As it is today, nocode will remain the most popular license, but unlike today , where 60-70% of all licensees are TECH, there will be a larger % of General & Extra.
3) Overall numbers of HAMS will increase, but slowly & not significantly. the 620,000 or so hams today may Perhaps reach a "whopping 700K or so. All the "Bad" CB operators, Scanner Dweebs, Porno addicts, Internet geeks & others that haven't bothered to get a Ham ticket up to this point still won't bother, even though the hardline new license "haters" want you to believe they will all be waiting in a massive line to take their tests...
THERE you have it , make sure your backpack is loaded w/kerosene & fire.....

ONELIST is a bunch of remailers.
You go to onelist.com and there you can search for topics that you are
interested in
and find a remailer for that topic, subscribe to it and all the messages
that everybody
sends on that remailer will come into your inbox. There are 2 list that I
know of related
to the VX5. They are yaesuVX5@onelist.com , and VX5EVE@onelist.com

6750. Looking for 2M handheld with wide band RX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: "Al, N2NKB"
Message-ID: <84jbg5mja1@bgtnsc02.worldnet.att.net>
Source record: 90446

Looking for a 2 meter HT featuring:
-Wide band RX, optimally A.M broadcast to 1 GHz or so, AM, NFM, WFM, AM aircraft
-Keypad that supports touch tones
-PL capability
-Up to a few watts TX power, even if external supply is needed
-Batteries compatible with store bought nicads, rechargeable alkalines, NiHyd.
-Antenna connector (SMA or BNC- not a family radio built-in one)
-Moderate price ~$250 or less
-Small

I will consider a dual band if needed to get the above options.
Any suggestions?
Al

I think it's a good thing. My time is better spent on theory
than code anyway. After April 15th, I can upgrade to General
for "free", that is, because I got my Tech back in 1976 I took
the General theory and 5wpm already. BUT----

Not that the code is now "done" with me, I'll probably get
the study guides to do an upgrade to Extra. And I'll keep
my current callsign. As my company is doing some IC design
of 2.4 GHz radios on a chip, that theory could come in handy.
Code isn't useful at work anyway....

I am posting this for a friend of mine, Paul, W8ZH. Please respond to him directly at w8zh@juno.com

73, George
K8BRW

I am looking for a Henry 8K. I have for sale or trade a Henry 4K Ultra, S/N 265. I have the original bill of sale, amp was built in 1982. This amp is cosmetically and electrically perfect. only defect is wattmeter needle is bent very slightly to right. meter movements are available from Henry for abt $100. goes with spare 8877. Driving with IC-746 will pin internal meter and about 3K out on coaxial dynamics wattmeter. will trade or ?. Will swap complete station, 4K Ultra and Icom IC-746, 746 purchased new in May 1999 and has less than 50 hours on it. This gear is in as new condition. I also have a homebrew pair of 8877 on 50mc. It is ugly, crude and built on used chassis, etc., but driven with the 746 it will make 3800 out on 6. Its kind of like the W6PO 2 mtr amp but uses 2 tubes and lumped inductors instead of pieces of pipe. It has 4400v, 2amp supply, Dahl 80lb plate xfmr, etc. is in junky 6ft rack. I am open to offers if any interest. Thanks, w8zh@juno.com or 440-548-4426 anytime.

Paul

6758. Re: FS: Extra Ham Ticket...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: Bill Gallagher <KS3Y@prodigy.net>
Message-ID: <84jd39$4ut6$1@newssvr03-int.news.prodigy.com>
Source record: 90454

Pragmatically, I figure that since the FCC is not refarming the bands, that the 100 extra kHz of CW armroom I have will probably still be there.

Our tickets will now be in line with the rest of the world, for better or worse.

Frankly, I don't think in the long run that the changes will make much of a difference, except maybe on 14313, since 'they' seem to be attracted to that frequency.

At least we won't have the bloodletting and general destruction that was wrought by the dawn of 'INCENTIVE' licensing. (Ask your neighborhood OOT about that!)

Lets face it, people. This ain't the hobby it was even twenty-five years ago.

We cry about two grand for a radio that does everything but the dishes, but we paid 550 dollars for a 5-band HF rig back then.

Adjusted for inflation, that's about thirty-seven hundred of today's dollars.

Check our allocations today versus 1975. Guess what, boys and girls?

That's right. We have LOST 90% of our bands, virtually all to businesses.
They want 6, 2, the rest of 220, and all but 5megs of 440.
They want ALL of 903, ALL of 1296, and have already gotten almost all of 2300-2500MHz.

Code or not, we just aren't "utilizing these frequency bands enough to warrant their continued occupancy by the service currently assigned them...". (you should read some of the proposals before the FCC... and look at makeup of the Commission. Business people, not radio people.)

I wonder how much longer the hobby will last? Probably a good long time, 'til the last of us die off. We will probably keep the HF bands in the long run, because technology is pushing into the microwave bands. We don't get to go along for the ride because we're not allowed to be creative, inventive, or experimentive any more. We may step on some multi-national corporations toesies, and we can have that!

Well, that's enough. Keep those flames and letters coming, and have a great New Year.

Remember...on;y 366 days to the new millenium (2000 is a leap year...let's see what Feb. 29 does to our computers!)

73!

Bill WA3RA / EI4VSH (ex-KS3Y, and holder of a 35wpm proficiency certificate)

Source record: 90457

Hi,

I bought a used AL-80B about 2 months
ago. It has the Amperex 3-500Z that came
with it. I use it on AM! 20-Watts of
drive from a Johnson Ranger yields
185 Watts output. The plate glows
a nice orange and the amp works
well in this service. The amp is
one year old. The Amperex heavy-
graphite tubes looks like a winner.

Have you looked at the Icom IC-706MKII or the IC-706MKIIG?

Well look at this way, now you can upgrade all the way to Extra without
getting
that "the pounding in my head" feeling from trying to learn CW at 20 wpm.
You
don't even have to spend a cent on aspirin either! Get over it.

Well I don't consider myself a kid and this is the best thing to come down the pike. Probably a lot more HF, VHF, UHF and Microwave experience that you will ever have as a ham.
I guess I'm lucky, I've had a TECH ticket since 1951, took the code, took the General Class written, held a Radiotelephone 2nd Class with Ship Radar Endorsement. Then in the '60s I was transferred out of electronics to sales and PR. My licenses expired. Never worked CW in my whole life. Tried to pass the 5 WPM in the late '70s but couldn't pass it, never could get it back. Now at 69 years old maybe I can get my license back again. Oh yes after I got my Tech lic. I tried to go to 13 WPM never could get that either. Worked for AT&T and Public Safety for many years as a Microwave Engineer and Communications Officer. I think I'm qualified to have a General Class. Like to hear some comments. By the way I still have copies of all my expired licenses.

6770. Re: 2m+ HT for Out of Band TX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: Darrell Franks <defranks@hctc.com>
Message-ID: <s6qmp8495k2172@corp.supernews.com>
Source record: 90466

This issue was raised in a recent discussion, and I mentioned that I had modified an HT to allow me to transmit on my fire department frequencies. Several Hams pointed out that it is illegal to transmit out of band with a Ham radio.

I checked with the ARRL Tech desk, and sure enough, it's illegal. Commercial radios must be type accepted, and our ham rigs are not.

Message-ID: <s6qn0q9f5k2103@corp.supernews.com>
Source record: 90467

WOW! Lots of interest in this post!

After reading all the comments from hams about my post stating that I had modified an HT for use on the fire-department frequencies, I decided to make sure. I contacted the ARRL Tech Desk, and they told me that it is NOT LEGAL to transmit out of band with an HT, even when transmission on those frequencies is legal with another radio. As many of my better informed Ham friends pointed out, commercial radios must be type accepted and Ham radios are not.

Thanks to so many concerned hams for pointing this out. I thought I was doing a smart thing, and it turns out it wasn't. One of the best things about our Ham community is the willingness to share information.

I have always understood it to be an inverse relationship;

The higher the WPM , the lower IQ .

If society ever required me to live a binary (ie dit / dah) guided life,
then I may have a need to be a CW kind of in-DUH-vidual...

It's too late now, of course, but I wish that the FCC had two-tracked it. They could have had code and no-code (or 5wpm) tracks. Leave the CW portion of the Extra band for folks who can pass a 20wpm test. Leave the phone portions for folks who don't care about CW. The good news is, people who don't want to learn the code are still going to stay out of the code sub-bands.

I don't think it will affect me... I will keep on repairing the gear of the
coded
ticket holders who can pound cw, but aren't as successful with sand.

Oh, and I will do that with the extra burden of being a no-code tech,
overcoming social adversity to prove I am smart enough to pound sand.

Dick ,your answer was not germaine to the question.!
Has logic failed you for you to respond in such a nonsensical way?
Code users will still be able to practice any where
and on all bands so what is the problem? Those who feel that
code is the essence of being a' real ham' can still continue to
flourish if the newcomers hold to the same ideals as those
soon to become silent keys..
As for being a "real ham"
would you suggest that any engineer must work on an
assembly line until the task at hand can be done
without thought, automatic, before he be allowed to
have a P.E.licence i.e. to make him a 'real" engineer?
Instead of being just a gas bag hooting in the forest
try applying a modicom of civility and logic in your
communications with the newsgroup or groups that
you appeared to have stumbled into.

I can't speak for the Delaware operation, but the Salem NH group has, with the exception of one minor glitch, been very good to work with. I'm only about an hour away, though, so I usually make the drive for the major purchases.

If I paid for a new item, I wouldn't even consider accepting an obvously pre-owned radio, and I'm sure none of the guys behind the counter would, either. To do so would make one a patsy, and maybe flagged as such in the future. Fool me once, shame on you, and all that.

Good for you. I, however, won't be. I will be taking the 5wpm but, now thanks to the FCC, no faster. To me, the code is just like the sign language, or any other foreign language for that matter. It's nice to know how, but why should I be forced to be ultra proficient in an optional language that I may or may not want to use on the air?

I read with amusement an article in the "Welcome to Amateur radio" booklet which came with the ARRL welcome package after I got my Technician license. In it the author trumpeted the achievements of a particular gentleman who could copy some 76 wpm, and went on to encourage the readers to emulate his methods and "practice, practice, practice". For what?!!! So I can brag to my neighbors?

Code is useful, yes. My wife and I actually think it's fun learning it together. But more power to the FCC for giving code eliticists the proverbial UP-YOURS.

I'd rather learn how to pick up 2x4s with my butt cheeks than to copy 23wpm.
:-D

Look first for either a short or an open at a connector... you should
be able to check that with an ohm meter. Try to do it without
disturbing any of the connections. Just a month or so ago I
trouble-shot just such a problem for a friend with a marine radio
installation...darn solderless [non-crimp; screw-on] UHF connectors.
The system even kinda worked, so I wouldn't take ability to receive as a
good indication that everything is peachy.

If all that checks out, put a dummy load at the far end of the line and
see what you get...in other words, divide and conquer.

(I trimmed the distribution down the the couple groups that made
sense...hope he looks here...)

Cheers,
Tom

As an examiner for several years, I know that the 5 WPM "code test" is not a test. Most who pass are not proficient at 5 wpm. It's a combination of good guessing, a simple test, and geographical knowledge. If we're going to have a 5 wpm test then perfect copy (always examiners discretion) is one way to fight back.

Another way is to cancel exam sessions entirely and let the FCC figure out how to implement their new system - without our cooperation.

Of course if the new license structure leads to a new type of examiner that's going to have a second order effect more interesting than the restructuring. Most people hold the Federal Government in such disdain that they have no problem violating it's laws. (Just look at tax returns for example). So as the ranks expand the issue of bogus licenses is going to expload.

CW is outmoded, but useful. Microprocessor assembly language programming is much more mainstream and applicable to communication technology than CW, but it's much tougher to train someone to program than to teach them CW (I've done both).

On the brighter side, we don't yet give the tests in 15 native languages and today's ritalin numbed kids can hardly read the questions. I've actually been asked "why ham radio words have so many syllables" by high school seniors struggling with the novice exam. This means that as long as their is ANY test of ANY complexity the destruction of the hobby will take some time. A year or two more at least, perhaps three.

What we haven't considered is the financial barrier to entry. Next the FCC will institute a "radio access tax" so that those who can't afford a ham radio due to the high cost will be able to apply to a special fund (administered by the ARRL) for supplementary funds to lower the cost. After all, they do this now with telephones (not the ARRL, the FCC).

Another issue I see moving forward is the garbage on 2M effecting the license of the control operator. In some areas it's been really tough getting hams to put their callsigns on repeaters simply because of the behavior of users. Any decline at all in the quality of hams could make this really tough.

I suspect that some people are going to consider it prudent to close their repeaters before the suspected "onslaught" occurs so people don't naturally take up residence after they figure out how to program their VFO's, er channels.

/Len

Interesting analysis. And in the early days of amateur exams (pre-1930), what was the Morse proficiency requirement?

Since we have such a fixation on the way things used to be, I would argue that before incentive licensing, the pre-1950s amateur exam resembled more closely the new licensing structure that will take effect next year. What was the Morse requirement on the Class A and Class B amateur exams?

It's not knowing the code,it's being willing to make a small
investment in the way of a little effort to get something worth
having,and if the crybabies didn't think it was worth having they
wouldn't be crying.
Having a few simple hoops to jump through helps keep out the moderatly
interested that wonder from hobby to hobby,job to job,wife to wife,and
take what they can get but never give because they were really never
that interested.

I know such guys, too. And their main reason not to bothr about an amateur radio ticket is that they prefer to talk to sensible guys. And somehow, the above quote proves their point.

To hold CW responsible for the presence of alternatives for long distance communication, and thus of the presence of choice, and thus of a significant number of people opting for internet instead of amateur radio, is simply absurde.

Thats right Dwight ,I always heard how hard it was to become an extra
and had a lot of respect for the "radio Gods",then with no radio or CW
knowledge I started studying and had my extra 7 months later.I still
didn't really know anything about radio,just the code.I no longer
respect extras just because they are extras,and now even a poodle can do
it.They should have made the requirements harder,not dumbed it down.

The problem is that exams always trail the state of the art. The old commercial 'phone tickets were courses in radio-archeology. Then there is the matter of the licensee getting older. Some things don't change (antennas for example) but knowing that a quarter-mil of grid current is all one should draw on a 6146 won't do a whole lot for him or the hobby today.

Ultimately, one arrives at the conclusion that amateur licensing is a lot like driver licensing: be sure he knows the rules and posesses enough physical skill and ability so as not to be a direct party to an untimely death - then let him go.

In a hobby as multi-faceted as AR, much more than that is more harm than good. We will survive or we won't but licensing won't be a factor in much more than the speed at which it happens.

What I have yet to see anyone mention is the fact that you now only need to pass 3 written elements to become 'the upper crust' (to quote another). Forget the code speed for a minute, because many extra class hams (myself included) don't use CW as a primary means of communication. 3 written elements...the technician test being comprised of 35 questions. Talk about dumbing down. I salute the serious amateur who reads about radio theory and applies it to the question pools. This is the exception however. By removing two of the written tests and basically keeping the other three the same size (the jury is still out on the content), we are dumbing down the amateur population. I understand the problems people have with CW, but I have NEVER heard someone say, "If I could just pass the written I would be an extra". Anyone can study and pass an FCC test, and maybe (dare I say it) LEARN SOMETHING APPLICABLE TO THE HOBBY.

The reason the FCC gave for eliminating the 13 and 20 WPM requirements was that the inability to send and receive CW does not affect ones ability to contribute to the radio art. Well, a lack of understanding the fundamental priciples of electronics sure does. The written tests are now all we have. Where will the hobby be in say 15 years? How's propogation on 11 meters anyway?

That's a lie, Dick, and you know it. I passed the 13wpm Morse code and flunked the written exam first try. Second try, the ham didn't have any way to send Morse code to me. He called the first ham and asked him if I could do 13wpm. The first ham verified that I had done five minutes of solid copy at 13wpm six weeks before. My code test and written test were given by different hams. The same thing is possible today.

1) Who said "broadcasts" of the type W1AW is doing are not legal? Not the FCC regs.

2) Just because someone is opposed to a 20wpm code test to get a ham license does *not* mean that they're against CW or opposed to helping someone who wants to learn code at 20wpm or higher accomplish that.

Many are getting too carried away with this thing. If you love CW you should be doing back-flips because we didn't loose any bandwidth in the process.

>is easily accomplished.
>Bob

In all honesty, the ARRL was caught off-guard by the FCC proposal to restructure and was at first unprepared to respond. What the FCC finally came out with cannot be laid at the ARRL's doorstep... the ARRL's response and proposal came several weeks after the initial ARRL proposal. MANY, MANY, other groups and individuals were pushing for dropping the code altogether (not unilaterally feasible with international treaty) and many were pushing for Automatic upgrades of existing Tech and advanced licenses. Looking over the ARRL's proposal to the FCC and the FCC's final document, I'd say the FCC pretty much brushed aside most of the ARRL's proposals (tougher written exams, no multiple-guess CW exams, 4 license classes, and 5 & 12 wpm CW requirements)

The FCC final decision was their own, NOT the ARRL's and bears little resemblance to the ARRL's counterproposal.

What's needed now from US Amateurs is not condemnation... The FCC won't change it's mind just because a bunch of us are pissed off! Rather, work with the new licensees, and encourage them to explore the many facets of Amateur Radio.... I watched many a VE quit after the introduction of No-Code licenses...they changed NOTHING!!! (..many dropped out of the ARRL after no-code licensing, even though the League was the LAST organization to get on the bandwagon.. they were afraid of being left behind) What they did was give up one of the best chances they could have ever hoped for of aquainting new hams with appropriate on-air behavior, with the pleasure of code and Ham traditions and lore. By turning their back on no-coders last time around many more experienced hams fostered the very operating practices they were so worried about by not being there as elmers! Get involved with your beloved hobby of ham radio with OTHERS... it's not something to be worshipped in a corner of your basement shack!

A last thought.... the bureaucrats and businesses who'd like to auction off or buy our spectrum must dance with absolute glee each time we rip ourselves apart over the "details"... One of these days in the middle of one of our

infights over the "small stuff" we're gonna' turn around and find that our bands have been auctioned off while we were preoccupied with each other!

>
> It's another example of the lowering of standards here in the USA.
>
> BOB

Why do you assume that the restructuring will result in lowering the standards?

The lowering of the CW speed is simply the removal of an archaic requirement. Before you flame me, I enjoy CW operating, but it is archaic. CW is no longer used in any commercial service. The only reason that the CW requirement hasn't been removed from international treaties is that the parties involved have been too busy with other matters.

Removal of CW is only a lowering of the standards if we don't replace the CW requirement with something else. The other part of the ham exams, the written test, can be modified to require a demonstrated knowledge of topics more relevant to today's ham radio.

Fortunately, we can do this. As hams, we all can have input into the question pools.

I think restructuring may be the 'kick in the pants' that the amateur radio service needs.

Just think, if we required copying 60 wpm RTTY by ear in order to get
on HF there'd be plenty of spectrum available.

Hi Bri!

A bit too reactionary IMHO. New hams will still have to do it all,
just not the fast code testing.

No on can take away your 20wpm test passing grade. I think this will
be a GREAT advantage for all those folks wanting to be hams but could
not swing the fast code.

I have passed everything except the 20wpm test (I missed it by one
question).

Code will still be there for those wanting it, and those that take the
time to learn it and pass 5wpm show good effort and desire becoming a
ham IMHO.

I applaud the FCC on this one.

73 - Ed - KF6YKM - Soon to be Extra and happy about it. 8-)

No flame from me! I am VERY happy with this decision. It will get good hams such as yourself into HF, make HF a less 'exclusive' environement and make alot more good people out there to contact and enjoy conversation with.

I think alot of the old timers may balk, but they must make provisions to entice new, younger hams into the hobby or it will die. I think this is the shot in the arm ham radio needs.

>It's another example of the lowering of standards here in the USA.

Doesn't seem to be a lowering of standards, but a change in values. In a world of communications vastly different than 50 years ago, the rule makers decided that priviledges should not be granted on one's ability to be extremely proficient on outdated "information".

I have never judged an operator's proficiency on his license class or code speed, but his professionalism, politeness, and willingness to contribute to the hobby and public at large. Instead of using your energy to complain about this new structure, find a new ham and show him how to be a better operator or teach a new ham how to build an antenna.

Tell you what guys. I'm a Technician class operator and I'm gonna try to learn atleast the 13 wpm before this goes into effect. 5wpm is slow enough that it causes one to fight the temptation to count dit's and dah's. Yeah, people may be able to pass a 5wpm exam, but will they be able to communicate in CW? I think not. I'm really upset that I won't have to push as hard and that when I do get my Extra ticket it won't mean anything, especially to all those who before me have had to work more for it. Now let's see what happens and hope it isn't what happened on CB when it became de-regulated.

The answer to your question is yes, the second freq. stops the receive function when the first is transmitted. Even with a duplexer feeding 2 antenna, the radio itself only has one connection for the VHF band(s). This connection is put into use transmitting, therefore, no incoming signal is able to be received by the radio.

6852. Review of Optoelectronics M1 Frequency Counter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: tmelcon@mit.edu
Message-ID: <386c5df8$0$22854@senator-bedfellow.mit.edu>
Source record: 90554

BACKGROUND

There exists in circulation a review of the Optoelectronics M1 frequency counter from 1994. This review is available from, among others, http://qrz.com/files/library/oe_m1.txt. However, this review is somewhat out of date, and the device currently being sold as the M1 is substantially different from that discussed in the review. Having recently purchased such a device, I would like to provide more current information.

I would like to begin by providng some background information on the various models of Optoelectronics hand-held frequency counters available. This information and more is available from the Optoelectronics web site, at http://www.optoelectronisc.com. However, in light of Optoelectronics' apparent tendency to change models while keeping the name the same, it seems that it may be useful to note some of the more prominent features of the current model, to allow a future reader to determine if these models have changed since this article was written.

Scout: The scout has three switches and button on the front panel, with the button rightmost. It has a range from 10 MHz to 1.4 GHz, 400 memories, and selectable filter, capture, and gate. The main feature of the scout is that it automatically tunes some scanners, and its ability to bee/vibrate when a new frequency is acquired. $449.

Mini Scout: This model is like the scout, but without the memories, backlight, or beeper. $249.

Cub: The case appearance is like that of the Scout, with three switches and one button. Range is from 1 MHz to 2.8 GHz. The gate is selectable, and a 1-250 MHz range is available. No memories. $149.

3000A+: A very decorated case with blue and red highlights on it, as opposed to the plain cases of the others. Range from 10 to 3000 MHz. Four vertical switches and two horizontal on the left, and three buttons on the right. Four ranges, three memories, built in highpass filter. Provides measurement of Period, Ratio, and Intervals. PC interface. Backlight. $350.

M1: Black case with four buttons and no switches. Range from 50 Hz to 2.8 GHz, with a 10-250 MHz range and a 50Hz-40MHz range. 100 memories.

OVERVIEW

I wanted a frequency counter for two uses, off-the-air RF measurements and benchtop use. Of the Optoelectronics models, only the M1 and 3000A provided measurements below 10 MHz or so. I selected the M1 over the 3000A based on the aforementioned reviews by Brian Mork.

The current M1 is substantially different from that previously reviewed. The most obvious differences are the change of the case from switches to buttons, and the increase in the number of memories from 3 to 100. More subtle differences also exist.

OPERATION

The left button turns the power on and off. Holding it down for two seconds turns on the backlight. The backlight remains on until manually turned off. It does not time out and turn off after a certain period of inactivity.

The third button selects the range. Three ranges are available. The A range is a 1 Mohm input, for measuring signals between 50 Hz and 10 40 MHz. (in practice, mine works down to about 10 Hz). The B range operates from 10 MHz to 250 MHz with a 50 ohm input. The Prescale range operates from 30 MHz to 2.4 GHz. The device always powers on in the Prescale range.

The second button selects the gate. In the A and B ranges, 2 to 7 decimal places (in a MHz scaled readout) are availble, with gate times of 100us to 10S, respectively. Strangely, the instruction manual fails to list the most accurate setting in its list of gate times, though the catalog lists it. In the prescale ranges, 2 to 5 decimal places are available, and the gate times range from 6.4ms to 6.4s.

The fourth (rightmost) button selects the mode. The power-up mode is the standard one, in which a count is taken constantly. The second mode is "filter" mode, in which a frequency is displayed only when the internal processing is satisfied that there is a genuine signal instead of noise. The third mode is Capture, in which the filter is active and all unique recorded frequencies are stored to an internal memory. The fourth mode is Recall, in which the second and third buttons scroll through the recorded frequencies.

There is a bargraph on the display which gives an indication of the total RF energy received, in arbitrary nonlinear units of "approximately 3 dB". It seems inactive in the A range, and functions only in the B or prescale ranges.

GENERAL COMMENTS

The display always reads in units of MHz. This means that the counter isn't as useful as you might think for low frequency measurements. If you're reading something at around 50 Hz, the longest gate time will still get you only three figures in your answer. That's not particularly good. Therefore, though the stated specifications go down to 50 Hz, and I've found that it will actually count down to about 10, it's not that useful below the tens of kHz range.

The use of a button to select the range seems like a misfeature - one cannot power on the device in the 1 Mohm range, so one needs to disconnect any direct connection to the device when it is powered on in order to avoid damaging it. This would not have been a problem with a switch. No functionality is lost, but having to disconnect the cable every time I turn on the counter is mildly bothersome.

There has been some question as to the utility of providing more than 6 digits with a 1ppm timebase. This is useful because the display does not scale, but always puts the decimal point at MHz with three or four digits to the left of the decimal. When measuring a 10 kHz signal, for example, the leftmost four digits will all be zero/blank.

Unlike the previous M1, and possibly some other Optoelectronics models, filter or capture mode does not require arming. Signals are displayed or written to memory whenever they pass the filter. The filter also seems to become more selective as the gate time is increased. The behavior when all 100 memories are full is not clear to me, as I have come nowhere close to filling them.

The gate is not selectable in Capture mode; three digits after the decimal point (and the corresponding gate time depending on the range) are always used. Pressing the gate button has no effect. This means that capture mode isn't good for much when using the A range for low-frequency signals.

The battery indicator is not actually a "low battery" indicator, but is instead a "no battery" indicator. It does not turn on when the batteries are getting low, but instead turns on after the unit has stopped operating due to low battery power. This behavior seems less than useful, and the indicator might as well be absent.

The new manual is no longer folded 8.5x11" sheets. It is now folded 4.25x11" sheets. No schematic is included.

SPECIFICATIONS

The inconsistency in the 50 ohm maximum input power is still there - it says 15 dBm or 50 mW, and 15 dBm is still 32 milliwatts, not 50. The A-range maximum input power is listed as 50 V AC+DC. The capacitance on the 1 Mohm input is listed as 30pf.

frequencies(hz) range sensitivity
1k-10M A < 30 mV
10M-40M A < 60 mV
10M B/Prescale < 10 mV
150M B/Prescale < 5 mV
800M B/Prescale < 7 mV
1G B/Prescale < 12 mV
2.8G B/Prescale < 100 mV

TEST RESULTS

I first tested the M1 using my frequency generator, capable of generating signals up to 2 MHz. Below I've listed some tested frequencise and the peak amplitude (ground to one side) required for detection. Sensitivity falls off as frequency decreases, as shown below. Sine, square, triangle, and sawtooth waves were all detected with very similar peak amplitudes, so they are not listed separately.

100 Hz 57 mV
1 kHz 49 mV
10 kHz 29 mV
100 kHz 29 mV
1 MHz 30 mV

This doesn't seem to meet the specified 30 mV around 1 kHz, but it's close for the rest of the range.

My lack of equipment generating signals between 2 MHz and 144 Mhz, and my lack of an accurate timebase, prevent me from providing information about these aspects of the counter's performance. I would, however, like to offer some qualitative comments on the performance of the counter in obtaining the frequencies of FM transmission with an antenna. I was able to determine the frequencies of the following transmitters at the distances listed:

49 MHz cordless telephone 10-15 feet
VHF/UHF radio at 500 mW 20-40 feet
VHF/UHF radio at 5 W 100-150 feet

(VHF and UHF results were nearly identical, so they are listed together). These results were taken in a suburban setting, away from any broadcast FM sources. In ambient conditions, no bars on the signal strength bargraph were lit. I tried several wideband antennas and found little differences between them. These included the telescoping antenna provided by Optoelectronics, the Diamond RH77, and the Premier RD8. The reception distances remained largely the same regardless of antenna. The frequency detected in these situations was quite accurate (146.40013 for a nominal 146.40 transmission, for example).

In the city, where the background emissions lit up around 4-5 bars on the counter's bargraph, these ranges were reduced by a factor of approximately four. The use of a notch filter to eliminate the frequencies around those of FM broadcast returned performance to levels comparable to those in suburbia. Thus, such a filter or a narrowband antenna is recommended (I found that my Premier RD8 (a short rubber duckie) was substantially less sensitive to the 100 MHz region than the Diamond or the telescoping pickup antenna, but this low frequency desensitization also makes it useless for detecting 49 MHz transmissions). Optoelectronics charges $100 for a notch filter, but I built one myself for approximately $15 worth of parts (the most expensive of which was the case). It isn't extremely precise, but it's quite adequate for my purposes. I would strongly recommend the use of a filter for bench measurements, as well. When measuring the

output from an 8 MHz crystal oscillator, I found that the leads on my probe served as enough of an antenna that, without the filter, a good reading could not be obtained. With the filter, I had no difficulties. The same held true of measure the refresh rate of my monitor with an antenna; the broadcast FM notch filter was the difference between reliable readings and noise.

I shall provide a followup posting including more detailed information about performance in the HF region and accuracy if I acquire equipment allowing me to perform such tests.

CONCLUSIONS

In the regimes where qualitative tests were possible, the M1 seemed to come fairly close to meeting its listed specifications. Its sensitivity in the VHF and UHF regimes was adequate to make it useful for pickup with an antenna, provided that an FM broadcast band notch filter is used in areas near FM broadcast towers. Such a filter may also be required for accurate benchtop measurements in these areas.

I can offer no comparisons between the Optoelectronics M1 and other frequency counters, as I have not had the opportunity to use others. However, my experiences with the M1 have been quite satisfactory.

Yep. I always thought that the pre-published question pool was a
mistake. If a person was able to learn CW at 20 wpm and do a bit
of memorization, then they could have an Amateur Extra Class license.
The result - an Amateur who can send/receive code at a high speed,
but may know next to nothing about electronics.

That has now been simplified to only needing to learn 5 wpm Morse.
You can handle about that speed after simply memorizing the code.

I guess I will finally be getting my Extra Class license. The
11 wpm plateau where I have been stuck for several years will no
longer be a barrier.

I just wish they had the old style questions - where real electronic
knowledge was required.

You mean like the driving test, Dick? Every state publishes a simple
study guide for the license test, and the tests are even shorter than
the ham license test. Every answer on that test is in that short thirty
or forty page booklet. I don't hear your outrage over this. And I
don't see you handing in your driver's license to demand a new, tougher, test.

Hey there,

Another question has popped into my head....

Says that Technician Class licensee prior to March 21, 1987 will be able to upgrade to General Class providing documentary proof to VEC,pay application fee, and Completing Form 605.

I understand the Technicians prior to March 21, 1987 had to take the General Written exam...and a 5 wpm code test...

So why wouldn't the FCC let a Post March 21, 1987 Technician Plus who has recently pass the current General written upgrade automatically to General Class?

Pre-March 21, 1987 : Technician = General Written & 5 wpm Code test

Post March 21, 1987: Technician Plus = Novice/Technician/General written tests & 5 wpm Code test.

Why in the world wouldn't the FCC grant current Technican Pluses that have pass a Current General Written exam with in the past 365 days the same oportunity to automatically upgrade to General Class???

What is the difference?

I agree completely. Although, I haven't read the entire changes myself, I do know that the value of the ticket has gone down. I worked my behind off for that 20 wpm in order to have "extra class" priveleges. Now, you can do it with 5 so "Good Luck". At least they could have expanded the old extra class priveleges....

I completely agree with you. I have had my ticket almost 6 years and am in the same boat as you. This time I am armed with plenty of time to learn, ARRL CD's, and a practice oscillator. Back in 94, shortly after I got my ticket, at one time I was a No-Code General, but lost that element after I couldn't learn code fast enough. I feel that 5 wpm is fast enough to get started and have no immediate plans to use it much, its just required to get phone access to HF.

Message-ID: <15FsOJMY2Kyo9bZyZzHN3HZUtB8l@4ax.com>
Source record: 90572

Boy I read a lot of bad feelings concerning the new attempt at saving a declining hobby. Should be the other way around. I know , I know a lot of you feel cheated, me as well, I'm advanced and I'm getting screwed along with all the rest. I spent many hours pounding code into the wee hours until aspirin wouldn't help the pounding in my head. I drove to Detroit many times to the Federal Building to be metal searched before being able to just take an exam ect. Trying to listen to code thru a old wireless headphone system stretched around the room, that was worse than, on the air static. That was before VEC's, and the hobby was different, there wasn't any Internet to speak of, and Ham radio was in it's heyday. Sadly now days kids don't want to take exams, learn code ect. just to be able to talk to the world. They don't want to listen to a bunch of old farts, discussing their aches and pains, why should they? They can talk to the world in any chat room on the net, about anything they want, sex, smut, download porn ect. with mommy and daddy's computer. So what's this new Ham Radio license restructuring going to do? Make the radio manufacturer very happy no doubt, although I bet it will never be seen in their inflated prices. That's another thing that I think has brought down Ham radio, people can't afford 12 hundred, 25 hundred, or 3 or 4 thousand dollars for a radio. I know I can't and I work..Hell I bought a new TS-530s for about 550 dollars, now look at the prices. And the amps are even more out of line because they are much simpler in design, hardly no components compared to a transceiver, yet they charge more than a radio in some cases. So I think a lot of things has brought Ham radio to it's knees, and this last ditch attempt by the FCC and others, is just a dollar short and a day late. Hope everyone can get over it and move on, enjoy the bands while we still have them, and be glad they haven't taken some of them away.....An Advanced 2 cents worth...

That is total nonsense, Bill. Even a child can pass an Extra exam, including the morse code test. Many do. What does that prove? If we apply the standard you use above, it proves that no knowledge is necessary to pass the Extra exam, or that no knowledge is required to learn morse code?

Why does one person need 21 extra Lunchboxes, my sweet XYL asks? Spare parts, I sheepishly reply. NOT, says she. Further she says, either the Lunchboxes or the SX-88 go." Easy choice. I have 21 Heathkit Lunchboxes for sale or trade. I have examined each unit to the best of my ability and listed the descriptions below. Obviously I could make more selling the better ones and then selling the rest for parts, but I would prefer to sell as a package mainly because it gets them out of the garage at the same time which improves credibility with She Who Must Be Obeyed.

01. CB-1 (SO-239; xtal socket on rear; hole on front; volume control replaced; 1 small knob missing; no xtal; tubes light)
02. CB-1 (SO-239; xtal socket on front; no handle; extra holes in top; no xtal; audio static)
03. CB-1 (SO-239; no handle; hole on top; different mike connector; 3 holes on front; no emblem; no meter jack; no xtal; needs 6AQ5 for audio static)
04. HW-29/Sixer (SO-239; xtal socket and extra control/knob on front; no xtal; audio static)
05. HW-29/Sixer (SO-239; xtal socket and extra mike socket on front; extra chassis w/tube inside; no xtal; feedback)
06. HW-29/Sixer (SO-239; 2 holes on top; xtal socket holes on front; center of large knob missing; no xtal; audio static)
07. HW-29/Sixer (SO-239; one small knob wrong; emblem missing; mike connector replaced with phone jack; extra mike socket on front; extra holes on back; extra chassis w/tube inside; no xtal; feedback)
08. HW-29A/Sixer (Spotting switch on front; xtal; audio static)
09. HW-29A/Sixer (SO-239; xtal socket on front; no xtal; audio static)
10. HW-29A/Sixer (SO-239; xtal; audio static)
11. HW-30/Twoer (SO-239; xtal; audio static)
12. HW-30/Twoer (Xtal; tubes light)
13. HW-30/Twoer (Two holes in top; xtal; audio static)
14. HW-30/Twoer (Xtal; hum)
15. HW-30/Twoer (Xtal; hum)
16. HW-30/Twoer (SO-239; xtal socket on front; large mike connector; Trans-Rec-Trans switch replaced with toggle; wrong knobs; large relay and rectifier inside, hole in top; xtal; hum)
17. HW-30/Twoer (BNC; S-meter; xtal socket on front; 2 small knobs wrong; wrong handle; xtal; hum)
18. HW-30/Twoer (Xtal socket on front; pin connector on top; no xtal; tubes light)
19. HW-30/Twoer (Xtal; audio static)
20. HW-30/Twoer (Xtal; audio static)

21. Unknown (SO-239; no handle; no xtal; no meter jack; model and name removed; hum)

Note: None of these units have been serviced or cleaned. There may be other internal mods which I did not notice. Most of these came without microphones or power cables but I do have one extra mike and one extra power cable. Manual copies available for each model.

$21.50 each gets you the whole grouping. That's $451.50 plus shipping. For further information or pictures please email me directly.

Thanks and 73,

I have the following forsale:

1- LDG Electronics DWM-4 Digital wattmeter comes w/
3- UHF/VHF couplers
1-HF Coupler

This meter is featured in QST ad pages, as new 175.00 shipped

1- RFApplications Digital wattmeter VFD - hf version, never used 175.00 shipped

1- Mirage MP2 Analog 50-200MHZ 50-500-1.5KW ranges, never used 100.00 shipped

All these meters have remotable couplers.

Because of the Y2K paranoia, my server will be shutdown sometime today, my email connection won't be available after that until monday.

I have 3 items and 1 day left to bid on ebay as follows:

#1 KENWOOD TR-7950 2-meter mobile, 45 watts, one of the
older easy to program radios for more info and picture see:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=226362008

#2 20db gain 50mhz-216mhz antenna Amplifier. With a little
ham know how these can be used on 6 and 2 meters to give a
boost to the receive. For more info and picture see:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=226310426

#3 FINCO DISTRIBUTION AMPLIFIER This is a VHF-TV antenna
amplifier, but with a little ham know how it can used to
help out that VHF scanner or receiver, More info and
picture see:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=226453262

While viewing the above auctions please check out my other
auctions!

Bill:

Admittedly, I am one of those amateurs of which you speak. I hold an extra class license simply because of my ability to memorize the entire question pool and one lucky guess on the multiple choice code test (knew 6 of the answers, guessed one out of four on the remaining ones). Still, you can't memorize the question pools without learning something.

After having quoted my entire first post, Jason wrote this reply. I just wanted to add that my first post was meant to be sarcastic. I see pros and cons to both sides of the argument. I personally do want to pass the 13wpm as a goal I have set for myself. Even though I don't have to anymore, this is I goal that I want to shoot for. And if I can't learn at that speed by the time the test is done away with you may ask? Well I will know I tried and be more than content with the 5wpm and the chance to further my coe proficiency once I get on the air. I know that a lot of the people that will take advantage of this restructuring will not even use CW. I wasn't interested in that mode until I found out that one of my associates from work operates CW exclusively. Well, I just thought I would let everyone know where I stand on the subject, not that it matters anyways!

6881. Re: Problems with HRO Delaware

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: Why am I an EXTRA? <ThanksFCC@hotmail.com>
Message-ID: <386CC1B3.6F26@hotmail.com>
Source record: 90583

I have had the EXACT same experience with Bob and the rest of them in HRO Delaware. I ordered an Amp, it arrived in a box that had obviously been opened. I open the Amp, Gee.... the 10 meter mod was already done. Not only that, the top, front AND sides were scratched. I asked to return it, and got a VERY bad attiutude.

Okay, Isolated incident I said... Ordered a Tuner... it came, obviously "pre-opened" again, with, you got it, cosmetic damage. Back it went, and again they sent ME an attitude, like I shouldn't worry about scratches (2 inches long)... after all, it did work... right?!?!

OKAY, so, my friend ordered a Kenwood.. it arrived.... nonoperational. He calls them. They said send it to us, we'll ship ya a NEW one. Okay, he sends it... and NOTHING. Nothing, for 4 weeks. He calls, they said they will be shipping it shortly. I arrives 5-6 weeks later....and... WOW... its the SAME radio he sent them. Yep, so he calls Yaesu service... yep... they sent it from Delaware to California to be repaired, then sent it back to him. First, thanks for lying... second... hey, we are spending good money, we want NEW, unrepaired gear.

I USED to order all my gear from HRO Delaware.... no more. I have ordered at least 10 thousand in equipment from there.. now I give all my business to HRO New Hampshire. No crappy gear, and FRIENDLY, courteous people! They understand that we are paying thousands for this gear, and we are going to have it sitting on a table in front of us for a decade or so, and we want NEW, CLEAN, gear. Wow, what a concept!

Thats my $0.02

6882. grid dip meter useage question.....

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: sjcduke@aol.com
Message-ID: <19991231095424.22391.00000209@ng-fu1.aol.com>
Source record: 90584

I have a military grid dipper..the AN/PRM-10

I have a bit of experience with it.

However.....using it for one wave-length wire loops has me puzzled.

I want to use it to help me cut a bare, solid copper 12 gauge wire to the correct length. I want to make a loop of wire....one wavelength long.......a continuous, unbroken loop.......at 146 Mhz. Lets say that I start with my wire loop obviously too long, so I have the ability to trim the circumference of my loop. Lets say I start with a loop of 86 inch circumference.

For 146 Mhz....one wavelength loop...at what freq on the dipper should I look for a dip? Is it possible to get a dip, at the fundamental one wavelength freq...., in a continuous loop? Or should the loop be broken....to dip?

I have tried to dip both a continuous, unbroken 86 inch loop, and a "broken" 86 inch loop. I ** DO NOT** get a dip anywhere near 146 Mhz........ What do I need to know here? I think maybe it has to do with 1/4....3/4....etc.......wavelengths? Or harmonics.......?? Broken loop versus unbroken loop?? How....PRECISELY......do I use a dipper to get a one wavelength unbroken loop of wire at 146 Mhz? An unbroken loop of wire, resonant at 146 Mhz, is what I seek.

Thank you..........
sjc KA0FPJ

I would say "amen," especially to #3, but the problem is that most of the guys who overdrive transmitters and cause splatter over a 20 KHz bandwidth already know how and why to avoid doing it -- but just don't care.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: Dan <n7wpd@xxmission.com>
Message-ID: <84ihjmoqq1@news.xmission.com>
Source record: 90587

Jason,

The Report and Order says and I quote:

"The effective date provides a window of upgrade opportunity for current Advanced licensees. Between now and April 15, current Advanced holders may take the existing Element 4B, a 40-question test, giving them credit for having passed the current Extra written examination. Likewise, holders of a Certificate of Successful Completion of Examination (CSCE) for Elements 3B or 4B dated on or after April 17, 1999, will be able to qualify for General or Amateur Extra respectively when the new rules go into effect on April 15, 2000."

I may be wrong, but I interpret that to say that if you already know 5WPM as a Tech Plus, then you have until April 15th, 2000 to take Elements 3B or 4B to qualify for the General or Extra when the rules take effect.

Anyone else care to comment?

73 Dan / N7WPD

I sure don't see a problem with the changes. We now have
CB'ers in the 10 meter band, we have Generals, Techs and
Advanced operators in portions of bands there not supposed
to be on. We have all classes of operators in violation of
the rules everyday of the week. The problem here as I see it
is the same as its been for years, "ENFORCEMENT of the
RULES" We have groups of hams that seem to think they own
some frequencies. We have groups that cuss and swear on the
bands. We have groups that if someone gets within 3kc, go to
that frequency and try to take over. In my years of being on
ham radio, it sure seems to me the Advanced and Extra class
have the worst operating habits on the HF bands. And of
these poor operators many were CB operators at one time and
were rude there, ran big amplifiers, had to king of the
band. They came to ham radio and continue to have to be
king of the band. This is the way I feel about it, If you
feel other wise that's fine. Bill/KG8AW

Amen to that!

I'll be getting my "extra" as well, even though many of the old stuffed shirts won't recognize it as such. I may even apply for an "old" vanity call, to really confuse them.

Good things come to those that are willing to wait.....

Dave

Guys like you said the same thing when they enacted "novice Enhancement". I remeber the old farts selling off their 220 gear, because they didn't want to associate with novices. Life went on.

Guys like you said the same thing when the no-code tech came out. "Those no-coders are not "real" hams". Life went on.

Now we finally are recognizing the pointlessness of requiring advanced CW simply to access phone HF, and of course the old farts will whine about the doom and gloom that it will bring.

As far as I'm concerned, ham radio is much better off without guys that cannot accept people for who they are and not what class of license that they hold. I sincerely hope that this FCC action causes a lot of old stuffed shirts to sell all their equipment and throw in the towel. More room for the rest of us, that truly want to see ham radio progress, and who don't have a close minded, bigoted, and predjudicial attitude.

Dave

Considering a new Ameritron AL80B but have heard that they are uniquely hard on the 3-500zg tubes and somewhat unforgiving. Would like to have comments from owners. I operate primarily phone and cw with perhaps 10% rtty. I know what it is like to fry a tube inadvertently and don't want to do it again, and frankly don't have the bucks for an Alpha.

NEWINGTON, CT, Dec 30, 2029

"We believe that an individual's ability to tune a radio, display any
knowledge of antenna theory, radio theory or general electronics theory,
is not necessarily indicative of that individual's ability to contribute
to the advancement of the radio art. Therefore, all future tests shall be
based solely on payment of the appropriate licensing fee, whose amount the
individual will need to memorize from the sheet provided to the individual
during the testing session, and to then write a check in such amount
payable to the FCC. Those who successfully write a check in the
appropriate amount shall be licensed, and shall join the long and proud
community and heritage of the Amateur Radio Operating Community."

The Panasonic "Gigarange" 2.4 GHz phones seem impervious to interference
from any source. Unfortunately they cost a little more, about $150 for
the no frills model.

I think that a successful examinee would really deserve the license
if one of the questions was to derive Maxwell's equations and a second
was to use the equations to derive the properties of waveguides. What
I'm saying is that it's not the number of questions it's the quality
that counts.

You think? I went from Novice to taking the General written and getting
the Tech ticket. I'm a ham, no doubt about it. Have been since 1985.
You have a problem with that?

Likewise. It seems to me to be a fair compromise. No rule that says you can't operate faster than 5wpm if you like, but the 5wpm requirement satisfies international treaty requirements and sets a realistic level for qualification. And of course it eliminates all that abuse of the handicap exemption....

Indeed. And how *ANYONE* can consider a test that uses only
prepublished questions with their exact answers,studied at
will and completely possible to memorize unrelated word
associations to accomplish a passing score, as "of quality"
is beyond reason. It's just another Federal copout. Looks
good on paper if that's all you see.

I don't know how much power you are running or the nature of your antenna, but I have had good success with Uniden 900 MHz phones. 900 MHz is so far removed from HF that it shouldn't be an issue. If you currently DO have 900 MHz and it is generating problems, look toward a toroid choke on the phone line coming from the wall.

The key was that you said it was off the wall on the bands. Sounds like
the problem is in the feed line going to the antenna. Check for a short.
For what it's worth, I have a vertical next to the house for space
reasons and have worked 306 countries on it with good swr.

Well, now I wonder - has the FCC considered the fact that there will be too few Extra class callsigns to go around?

I don't care what they say, I'm still taking the 13wpm next week and "they" can't stop me!

Why couldn't they do something really constructive, like move the 40M novice CW segment someplace where the broadcast stations aren't stacked end to end every night?

I had the same problem and solved it by using a standard connector with a slightly larger inside diameter. I inserted a small piece of single strand wire into the hole and soldered it to the centre connection at the rear of the connector. This reduces the size of the hole making it a good fit to the TH215 etc.

And Surprise! I am already on record as being able to buy
that, even though I believe that every ham radio operator
should take it upon himself to be able to use code.
But you saw what the FCC said--essentially that "Our
solution is the one that causes us least work and time to
administer". Clearly they're never going to change it, in
our lifetimes.

Way to go, Don. YOU will be one of the few *REAL HAMS* to
emerge from all this.

While you're at it, just go for the Extra, too, prior to
April 14. You can get the 20wpm code in a month if you use
the W1AW code practice sessions on the air- which I would
imagine they'll probably discontinue after April 15 since no
one will need to use them for upgrading anymore.
If you do, try copying the sessions where they start faster
code first, then slow down progressively. Just relax and
listen, copying whatever you can at the faster speeds, then
when the slower segments come along you find that you can do
better than you thought! Try this for a month and you'll
have it. Good luck.

6922. Kenwood R1000 display problem

6924. Problems with HRO Delaware

Newsgroup: rec.radio.amateur.equipment
Date: 1999-12-31 00:00:00 UTC
From: James Giercyk <jgiercyk@inpro.net>
Message-ID: <386c4586_2@nntp2.nac.net>
Source record: 90640

Hello everyone,

I just wanted to throw this little caveat out for those of you looking into new (or so you think) equipment. In past years, I have purchased all of my equipment from HRO Delaware. Everything from batteries to the FT1000MP that is my main HF rig, and the FT900 I run from the car. I have also sent countless people to HRO Delaware, and specifically to one individual there who had always given me a good deal.

Recently, the deals are not quite as good, and equipment generally arrives damaged or even worse, used. Don't get me wrong, there is absolutely nothing wrong with used equipment. However, one assumes a certain risk in buying anything second-hand, and this risk is reflected in the price of the merchandise.

My last purchase (and I DO MEAN THAT) was a pair of 7 AHr gel cells. When I received them, I could not believe that both were cosmetically damaged on all sides, the terminal lugs were all missing hardware, there was no manual, and when I charged them, they would not hold a charge. So, this means that with 22 hrs to Y2K, I have no battery power other than my automobile.

If this were an isolated incident, I would consider it an oversight. However, more than half of the people I have sent to HRO Delaware have complained to some degree about this type of problem. What are amateurs to do when we have to rely mainly on mail-order franchises for our equipment?

It is my hope that this post will make hams more aware of what they are actually purchasing, and to advise them not to accept used or damaged equipment even if it is only a minor problem. We all work hard for our money, and to have them 'try and slip one by you' should be taken as an insult to your intelligence. Thank you for letting me vent...I realize this may not be the best forum for this, but I feel as though it is an important topic. Hopefully some wondering eyes from the HRO staff will find this. If anyone knows of another retailer where these issues do not arise, please respond to me directly. Tnx/BRgds/Happy New Year,

James J Giercyk

Hi Guys!

I think this is a VERY good thing.

For one, it catches up to the wrld ham community and out of the 70's
testing requirements.

For two, it'll get alot more good people into ham radio, especially
HF. Very few Tech's I've run into are bad operators and/or bad people.

For three, I think it will eventually drive the price down for HF gear
and give incentive to the manufacturers of HF rigs to develop better
gear for less $.

My 2 cents - Ed - KF6YKM
